(91) Treatment of Decorative Asparagus.—I have a bed each of Asparagus plumosus nanus and A. Sprengeri which have been in use about three years. Would it be advisable to replant with fresh soil, or put in new plants, as they do not seem to be in very good condition at present? J. W. M. Mass.

—The Asparagus Sprengeri we would certainly throw out, remove the soil and plant in young stock, using new soil. The Asparagus plumosus nanus we would retain and give a mulch of three inches of well-decomposed stable manure, and on top of that a covering of new soil almost one inch thick.

(92) Asters Dying Off.—I send you specimen of aster plants which are dying off in my greenhouse by the thousands. A small brown spot starting at the seed leaf, sometimes working up, sometimes down to the roots, destroys the whole plant. These plants are growing in ordinary soil with a little sheep manure mixed in. All other bedding stock is doing extra well in this compost. These seedlings were the best I ever had and came better than those of other growers nearby. I have been successful for years in aster growing, and this is my first experience of bad luck. New Hampshire. C. R. L.

—This is evidently a case of just ordinary damping off, coming through some unfavorable condition. Pull out every plant that is the least affected, sprinkle dry lime among the remainder and give plenty of air at all favorable times. It will also be in order to make another sowing of seed to replace the plants lost.

(93) Ribbon for Bouquets and Design Work.—Kindly inform me the most appropriate colors of ribbon and chiffon to be used on funeral designs and bouquets for various ages. Is foliage green chiffon an appropriate color for funeral arrangements? Cal. M. H. McC.

—Years ago it was believed that certain colors were more appropriate than others for floral purposes in funeral work. Thus, for a very old person, white or purple flowers and purple ribbon were considered the correct thing; white flowers with white ribbon for middle-aged people, and, for young persons, pink flowers and pink ribbon were admissible. Of late years, however, these color lines seem to have been entirely ignored, and flowers of any color with ribbon to match can be used with perfect propriety. Make your own styles and combinations; use ribbons that blend with the flowers and you cannot go wrong.

HENRY A. DREER, 714 Chestnut Street, PHILADELPHIA, PA.

(94) Dahlia Mrs. Roosevelt.—Who was the originator of the dahlia Mrs. Roosevelt, and how long ago was it put on the market? BEAULIEU. —Will some of our readers kindly answer this inquiry, and oblige. (95) The Height of Trees.—In specifying the height of fruit and park trees, say, to 5-7 feet, does that count from the ground to the top of the crown or how? T. E. —Yes, the height of a tree is under-

stood to be from the surface of the ground to the crown of the tree, or the top of its branches. J. M. (96) Propagating Berberis Thunbergii.—Please inform me how to propagate and grow Berberis Thunbergii, and greatly oblige. D. R. New York. —Berberis Thunbergii is raised so easily from seed that there is no need to consider any other plan. Gather the berries in Autumn, crush them in a box to loosen the pulp without bruising the

Horticultural Notes.

The wallflower, with its delicious fragrance, lives out in Winter when given some protection such as shade and a good mulching of forest leaves. Although not an annual it does best treated as one, as do many other plants of like nature. It flowers in early Spring, its beauty and fragrance rivaling those of any other hardy plant of the season. It has the merit, too, of retaining its delicious odor after its flowers are dried.

The seaside golden rod, *Solidago sempervirens*, does well in gardens. Its appearance differs from that of all other species. It grows very tall, has leaves of solid texture, with very large flowers—altogether a stately, handsome plant. Deep, damp soil suits it.

Clematis montana, a favorite vine for covering dwellings in England, was tried in Philadelphia some years ago, but failed to thrive. Does any one know of its succeeding outdoors in the Middle States? Its long sprays of star-like white flowers are beautiful, appearing in May and June.

As a climber for use outdoors in Summer the good old *Cobea scandens* is still appreciated. It grows fast, has pretty foliage, and its large, bell-shaped flowers make a great display.

Cercis japonica is thought to be handsomer as a bush than as a small tree. To keep it low, which will insure flowers from all the shoots next season, it will make later, cut it down to a desired height as soon as its flowering is over.

A much admired plant for pools of shallow, clear water is the forget-me-not, *Myosotis palustris*. This one is considered the true token flower, and not the *M. arvensis*, as some suppose. Its flowers are larger and of a deeper blue than those of *M. arvensis*.

Among all the *lychnis*, new and old, not one gives more satisfaction than the old *L. chaledonica*. Hardy as can be, sure to flower, its scarlet heads appearing for a period of many weeks, no border of perennials should be without it. There is a white form of it as well.

Vinca major variegata will live out in Winter when given some protection, but as its uses are for drooping purposes, in boxes, vases and the like, it is in better shape for use when pot grown. It likes good drainage and lots of water in Summer.

Those interested in basket willow culture should write to the Forest Service of the United States Department of Agriculture, Washington, D. C., for its pamphlet on the subject. It is understood, too, that cuttings will be furnished those interested.

Hibiscus sabdariffa, a plant known as "roselle" and "red sorrel," which is well known in the West Indies, where jams and jellies are made from its flesh, calyces and from its seed pods when they are young and tender, has been introduced in Hawaii with good results. It is said that in the West Indies from 6,000 to 7,000 pounds of fruit per acre can be obtained under average conditions.

Cedrela Sinensis.

So many persons are acquainted with the *ailanthus* tree that when it is said the *Cedrela sinensis* has foliage almost like it, what it is like is pretty well understood. When first introduced it was said of it that it could be used instead of the *ailanthus*, having the favorable points of the latter without its objectionable ones, those of its malodorous flowers and its suckering habit. This is true as concerns its odor; there is none of an offensive nature at all connected with its flowers; but of its suckering it cannot be said to be absolutely free from this habit—but few trees are—although it suckers so little that this objection need not be considered. To lessen its chances of suckering seedlings should be used instead of those raised from root cuttings, because, as gardeners know, a tree or plant raised from root cuttings is apt to increase itself in the same way, and sometimes when it is not desirable.

While of an *ailanthus* appearance in its foliage its style of growth is quite different. It forms a round headed tree, much as a Norway maple does, a form not often seen in the *ailanthus*.

Like the *ailanthus*, Kentucky coffee tree, linden and other trees, it gives no evidence in its young stages of growth of its handsome, rounded appearance as a tree. Nurserymen know how hard it is to sell the Kentucky coffee tree on its appearance in the nursery. It is much

the same with the *cedrela*. There is no evidence then of the handsome trees they become eventually.

When raised from root cuttings the *cedrela* needs cutting down several years in succession in order to get a good straight shoot, as its tendency is the other way; but seedlings grow straighter.

Is the *Platanus Occidentalis* of Value?

A New England subscriber wrote us a short time ago asking us to describe the difference between the American plane, *Platanus occidentalis*, and the European one, *P. orientalis*, and, further, asked us if the former is not as good for general planting as the oriental. Answering the second question first, the American is not considered the equal of the oriental, because that it is subject to leaf blight, which the oriental is not. This blight attacks it in early Summer, damaging the leaves to such an extent that they fall from the tree, continuing to litter the ground all Summer long. The oriental is not subject to the same attack, or if it is, it has never been reported as being of any great injury to it. This blighting of the foliage debars the American from general use, so much so that many nurseries do not keep this tree in stock at all.

Concerning the distinction between the two species, there is a difference in the leaves, as can be seen when

Every family wants sweet cherries in its garden for eating out of hand, yet it is the pie cherry that is the poor man's tree. The one who has space for several trees sets out an assortment, but where there is room for but one, it is oftener than not that a pie cherry, or Morello, is selected. There are many other sour or partly sour sorts besides the Early Richmond, but this is the popular tart cherry, and the one generally called for. Duke cherries are all partly tart, and there are several sorts of Morellos, still, the Early Richmond leads all, and it is this that is the popular one, nurserymen say.

Among the sweet cherries the old standbys Black Tartarian, Governor Wood, Napoleon, Rockport, Windsor and Yellow Spanish are still as great favorites as they were thirty years ago.

One has to be very careful in transplanting cherries. They will not endure a drying out at the roots, and, more than this, if well pushed out before being transplanted they are apt to fall entirely. A good pruning back of their branches, fully one-half of their length, and great care that the roots do not become dry, lead to success.

Polygonum Cuspidatum.

Although the *Polygonum cuspidatum*, like another species, *P. sachalinense*, spreads so fast that it is undesirable in some locations, there is no question of its value

for planting where masses of it are just what the position requires. It loves a damp place, and to be undisturbed. Given these, it spreads quickly and then is just the plant required. Our picture takes in two lots of it. The clump in front is at the foot of a decline where it is always damp; and see what a nice display the plant has made! Lower down, bordering a lake, in which are flourishing plants of *Nymphaea corymbosa*, is a mass of the *polygonum*, which is well placed, and which is a handsome sight, as a background to the water lilies.

In some works this species is mentioned as being not unlike *P. sachalinense*, but the latter is a coarse grower and not nearly as ornamental a plant

Polygonum Cuspidatum.

the two are compared, but it cannot well be described to be plain enough to be of use here. When trees commence to bear seeds it is easy to distinguish them. The American plane bears its seeds in single balls, while those of the oriental are mostly in twos, sometimes in threes, and even in fours at times, rarely in ones. This is a good guide, enabling any one to collect the seed true to name and to get cuttings in the same way—for it can be grown easily from cuttings.

It is a pity nurserymen do not discourage the planting of the plane on small streets. In Philadelphia, as, doubtless, in other cities, these trees are found along the sidewalks of streets of but 10 feet width. Just think of what this will mean in but ten years' time! The huge bodies of the trees will occupy half the sidewalks in time, while the branches will spread across the street. The plane should be planted only along the sides of the widest avenues.

A great deal of attention is being given to the *giukgo* as the coming street tree. It promises well.

Plant a Few Cherries.

It may be that the San José scale attacks cherries as well as other fruits in some localities, but it certainly does not in all. There are orchards in Pennsylvania in which are pears, apples, plums and cherries, and amid the general wreck of trees because of lack of proper spraying the cherries are the only ones that appear free from attack. This observation is strengthened by the report from other sections of the country; and it thus appears safe to say the cherry is a fruit that those who do not wish to spray can still enjoy.

as the *P. cuspidatum*. *P. sachalinense* is the one sent out many years ago as a forage plant, but cattle failed to respond to the advertiser's claim that they liked it, and it is heard of no more in that connection.

The *Polygonum cuspidatum* is too strong a grower and produces too large a mass of flowers to be of much use for cutting from, but for positions like those occupied by the plants illustrated or any other where there is no objection to its spreading all it wants to, it is an excellent one to use. As said, the plants like a wet place, in this respect being in accord with several of the wild species of this country. The one of our notes, *P. cuspidatum*, comes from Japan.

The appearance of the plants in the photograph may mislead some persons to think them shrubs. They are perennials, the tops dying down every Autumn, when the plants should be cut down to the ground.

JOSEPH MEEHAN.

THE OREGON CHERRY FAIR. The annual cherry fair at Salem, Oregon, is being looked forward to by the fruit growers of Oregon and the entire Pacific Coast with keen interest. Indeed, fruit experts in all parts of the continent are watching this event, a site stands for the best exhibition of the best cherries grown anywhere in the world. Although the date has not yet been fixed for this fair in Salem, it is safe to say that it will be held early in July, as last year's date was July 10, 11 and 12. There is now every reason to believe that a large crop is in store for the cherry growers of the State, for this season, as the trees have bloomed bountifully and, as far as can be learned, a large crop of fruit has set.

JOTTINGS FOR FLORISTS

BY EDWIN LONSDALE

New Double Lobelia Kathleen Mal-lard is now blooming in the greenhouses at Girard College. It is a beautiful rich blue in color, and the flowers are full double, which makes it a very attractive plant at this season of the year. If it will flourish in our hot and dry climate and continue to flower all Summer, it will be a decided acquisition and no doubt will be planted in large quantities next year.

Begonia Gloire de Lorraine Plants that were put into the propagating bed as leaf cuttings about the second week in December are now in 3-inch pots, averaging four shoots to each plant. The advantage of leaf cuttings in increasing the stock of this valuable hybrid begonia is that the plants so raised will furnish lots of stem cuttings from now on, which will root with

beans, although it has been stated that a cut worm had something to do with diverting the climbing tendencies of one of the now thoroughly established dwarf varieties of this toothsome edible of the Leguminosae family. Among flowers—to refer to them again—the dwarf forms of sweet alyssum, Drummond's phlox and many others too numerous to mention here have originated as seed sports.

Schizanthus Wisetonensis The illustration here shows a dwarf or compact form of Schizanthus Wisetonensis which originated in Girard College greenhouses. My first acquaintance with the schizanthus, to which this paragraph refers, was an illustration which appeared in one or more of the florists' trade papers five or six years ago, which referred to same as a novelty among the British florists. After looking through some of the Am-

Schizanthus Wisetonensis Compacta

a certainty in a warm house and grow like weeds, and will be the making of fine plants for the holidays. Carried over plants are somewhat sluggish in starting to produce succulent cuttings for a while yet, so that it is really better to depend on leaf cuttings entirely when the desire is to have this begonia for Christmas at its best.

In making stem cuttings of Gloire de Lorraine begonias be careful to have at least one growth bud at the base of same. This will be the means of laying a good foundation for the right kind of a plant; and this precaution holds good in the propagating by stem cuttings of the semperlorens and some other species of begonias.

Seed Sports At the May meeting of the Florists' Club of Philadelphia the term "seed-sports" used by the undersigned led to quite a discussion. The claim made was that a seed sport is apparently the way generally made use of by Nature in her predisposition to vary.

Seed sports are more frequent than bud sports of branches of shrubs, or trees, but they are not always so distinct or pronounced as to attract attention in the former as in the latter, though there are some very notable exceptions to that rule. For instance, the Cupid or dwarf sweet pea is a very distinct form of that favorite annual which originated in no other way than as a seed sport. Among vegetables there are several distinct dwarf forms of Lima

american seed catalogues, seed of the plant was obtained, but unfortunately not a plant resulted therefrom. In 1905 more seed was secured; this germinated all right, and from plants that were grown from this seed we saved enough seed for our own use. The plants varied somewhat in height and the coloring of the flowers was all less or more different, one more pronounced than the rest being a pale purple with dark velvety blotches on the upper petals. Personally this coloring did not appeal to me, but a number of visitors and others connected with this institution preferred this coloring to all the others. There was another plant quite distinct among them; this was smaller in every way, the shoots were more silice, the leaves much smaller and the flowers were also a trifle less; altogether it was a very neat little plant. This was set aside, away from the others, and in due course some seed was collected. This seed was sown on November 19, 1907, and in a week it showed signs of germination.

When the resulting plants were large enough to show character, the difference between them and the older type was quite noticeable all through their periods of growth. They were potted on from time to time until March 4, 1908, when they received their final potting, which was into 6-inch pots, and they were in full bloom April 18. They were grown in a night temperature of as nearly 50 degrees as possible, in the carnation house.

209 Arch St., Philadelphia, Pa.

Your Money is well spent when you advertise in

THE FLORISTS' EXCHANGE

Cement Tables As will be seen by referring to the schizanthus photograph (which was taken by my assistant, Ernest Thomas, who also grew the plants), the plants are grouped at the end of the bed on which are growing carnations. Those to the left of the picture are Eucharis and those on the right are seedlings. The concrete retaining wall is plainly visible. This wall is two feet high and a trifle over three inches thick at the top. At the base it is about six inches thick and tapers on the inside upward. Inside the walls, up to within eight inches of the top, is filled in with cinders, the rougher material at the bottom, topping off with the finer, and enough sandy gravel was put thereon to lay common hard building bricks, to pave, as it were, that which would be the bottom of the bed. When all was completed there was space enough for 5 or 6 inches of soil. Before the soil was wheeled in some half rotted straw horse manure was spread over the bricks an inch or so thick. On this bed carnations have done remarkably well all Winter, considering they were not planted until October 1. This house was built by Hitchings & Company last Fall and it has proven very satisfactory in every way.

Mothers' Day well observed in Philadelphia on Sunday, May 10, and with it white flowers were made use of; but whether the surplus in stock existing in most of the large flower centers was relieved perceptibly has not yet been made known to me. White carnations were in evidence for the most part, though other flowers were worn to some extent. Here is another opportunity for growers, wholesalers and retailers to get together and keep up an agitation in advance of such days when flowers may be used appropriately and to the positive advantage of all concerned in the growth, sale and uses of cut flowers. The North American, one of the leading daily newspapers in the Quaker City, has taken up the matter and advocated the wearing of white carnations as being the most appropriate flowers for the purpose. It does look sometimes as though the carnation will eventually become the national flower. Let the good work go on!

FINE FERNS FOR JARDINIERS

Very bushy and in best varieties. Liberal count on all orders. 2 1/4 in. pots, \$3.00 per 100, \$25.00 per 1000.

NEPHROLEPIS AMERPOHLI

PHILADELPHIA LACE FERN

\$12.00 per 100, \$100.00 per 1000. 5% off cash with order.

These are good strong plants that were potted November and December last.

We need the room and must move them.

Also a fine lot of 6 1/2 inch pots at 75 cents each, 25 or more at 70 cents each. This is the most talked about fern of the lot and has been awarded a great many honors, including a medal by the Royal Horticultural Society of London and the "Kitt Cup" by the Pennsylvania Horticultural Society for the most meritorious new plant introduced in 1907.
Equally as good as green for cut flowers or pot culture.

The stock here offered is in superb condition.

WILLIAM P. CRAIG, 1305 Filbert Street, Philadelphia, Pa.

ARRIVED in fine condition, a fine importation of C. Trianae, C. Labiata, C. Schroederae, C. Gigas Sandariana, C. Harrisoniae, C. Citrina, Laella Aneaps, Oncidium Varicosum Rogersii, Onc. Ornithorynchum, Onc. Tigrinum, Odontoglossum Inaleayi, O. Roasii Majus.
We carry Orchid Peat, Sphagnum Moss, Basket, etc.
CARRILLO & BALDWIN, Secaucus, N. J.

ROBERT CRAIG & CO.
ROSES, PALMS, CROTONS

CARNATIONS and Novelties in **DECORATIVE PLANTS**
 Market and 49th Sts. PHILADELPHIA, PA.

Los Angeles, Cal.

The Hollywood flower show given by the Woman's Club was a great success. As a flower show pure and simple it was away ahead of any effort of the kind before attempted in this part of the State. Roses were at their best and were exhibited in great numbers—perfect specimens of their kind. Sweet peas also occupied large space. The arrangement of the exhibits was unique in that it was in banks around the walls, with several center tables, and two lily ponds—galvanized iron tanks. The banks, however, were solid, artistically arranged, and the effect strikingly spectacular.

A noticeable characteristic in the general display was the large number of potted plants, begonias and the like, contributed by over 250 parties interested in the success of the show. The professional exhibitors were Howard & Smith, Edward Rust and E. D. Sturtevant. The first named had a fine display of cut roses, Spanish and German iris, ranunculus, watsonias, and the large-flowering clematis. Because of the banking it was impossible to label the varieties without detracting from the display. Mr. Rust had gloxinias, fancy leaved caladiums, which, of course, were greenhouse grown, ferns, and a few other ornamentals, chief of which was a *Kalmia latifolia*, the first plant of the kind the writer has seen on this coast. The flowers did not have the beautiful sparkle, characteristic of those grown in the wild on the Atlantic Coast. Sturtevant's water lilies were beautiful, indeed; but the crowning glory of his display was the cut bloom of *Beaumontia grandiflora*, from the wonderfully vigorous, umbrageous vine growing on the south side of his house, exposed to full sunlight. Certainly no home should be without one of these vines where it will grow in the open as it does at Hollywood.

Mrs. John Murietta of Los Angeles showed some cut flowers of *Solanum grandiflora*. Of a beautiful golden color, with a peculiar yet delightful odor, these immense flowers, six inches in diameter, were a surprise and delight to all who saw them. This climber, for it is not a vine, is a rapid grower, deserves a better acquaintance, and a more extensive planting in Southern California.

The exhibit of fruit consisted of loquats, lemons, oranges, Cherimoya, or Anona cherimolia. Two specimens of *Ponderosa* lemon growing on one branch, weighed six pounds, kumquats, tree tomato or *Cyphomandra betacea*, pepino, or *Solanum guatemalense*, and a quantity of sweet lemons, the first of the kind that have come under my observation, were also exhibited.

The collection of wild flowers was small in comparison to that at the Pasadena show, yet it contained one plant not seen there—the beautiful *Salvia carthacea*, an annual of exquisite beauty on this coast, yet utterly worthless in the East.

To the mind of the writer, the most valuable part of the show was exhibits by the juveniles. The interest shown by the children, both in floriculture and vegetable gardening, was a revelation to all visitors, and this one feature of the exhibition was worth all the toil and labor bestowed upon it by the enthusiastic, industrious, patient women of the Woman's Club of Hollywood.

Gentlemen of the profession, wake up and take notice what it is possible to do in floriculture, if boys and girls are recognized and made to feel that they are good for something besides running errands; profit by the example set us by this noble band of women, and in the future hold no flower show without an exhibit by the juveniles.

P. D. BARNHART.

SEATTLE, WASH.—Seattle florists are discussing the possibility of holding a flower show next Fall, probably at about the same time as the horse show. The matter has not been definitely decided yet, but if the preliminary arrangements and guarantees can be satisfactorily made, the florists assert they will give the show. A flower show was held two years ago, and at that time an excellent display was made.

LEONARD COUSINS, Jr., CONCORD JUNCTION, MASS.

St. Louis.

News Notes.

E. W. Guy, Belleville, Ill., spent a day in the city last week visiting the trade. Mr. Guy reports that the continued rains since May 1 have greatly interfered with business in his town. All are awaiting good weather, as they have plenty of orders ahead for planting out, which will begin with this week.

J. P. Corbitt, a plantsman of Nashville, Tenn., was in the city last week buying bedding plants, in which he is doing an extensive business. The Easter trade, he says, was the best in years.

Phil Scanlan, commissioner of public parks, will be married Tuesday, May 12, to Miss N. Tompkins. Both Mr. Scanlan and Miss Tompkins come of wealthy parents, and it will be the largest society event of the year. Mr. Scanlan is a great lover of flowers, and no doubt the floral decorations, both at the house and church, will be on a large scale.

William Bonche, the landscape gardener, who made himself famous when he built the great He-No-Tea garden in the old Exposition building some years ago, has a contract to build just such a garden in the Jai Alai building, near the World's Fair grounds. He will have the assistance of C. C. Sanders, the nurseryman, who will furnish all the shrubs, trees and plants needed to carry out the work.

Oscar Huettman and George Schriever, two of the best florist ball players, have received flattering offers to play professional ball, but refused, preferring to stick to business and play with amateur teams about the city for a while at least, as both are still very young men.

Harry Young, of the firm of C. Young and Sons Company, was doing jury duty last week. The rainy weather all week made him forget that planting-out time needed him at home. The firm is crowded with both local and shipping orders.

W. C. Smith reports that he will take a run to Milwaukee this week to visit his sister, Mrs. A. V. Hunkel, who has recovered from her second sick spell. He says he will stop over in Chicago and visit friends in the trade.

The big wind, rain and hailstorm of last week, Tuesday, May 5, was quite a scare to the local florists. Reports from the different greenhouse men indicate that very little damage was done to glass. The parks suffered somewhat, large, fine trees being blown down.

This week rain badly interfered with the work of planting out. Our local greenhouses are in good shape, with plenty of everything to begin work with, if the weather would only settle down to clear and warm.

Foraker Didn't Say D - n.

When Senator Foraker returned to his home from the Senate last Friday he found he was the recipient of a magnificent bunch of roses. Unable to understand why the florists should be showering their donations upon him, the Senator got in communication by telephone.

"How about those flowers?" he is reported to have said.

"Why; won't they do?" the store-keeper replied. "Don't you like them?"

"Like them? Sure, but why should you send them to me?"

"Well, you paid for them," the florist replied.

"Paid for them? What do you mean?"

The florist then explained that a sixteen-year-old boy appeared at the store earlier in the afternoon and ordered \$14

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter.

Published every Saturday by the A. T. De La Mare Ptg. and Pub. Co., Ltd., Proprietors, 2, 4, 6 and 8 Duane Street, New York. A. T. De La Mare, president; Jas. H. Griffith, secretary; David Touzeau, treasurer; Alex. Wallace, editor. The address of the officers is the address of this paper.

P. O. Box 1607, NEW YORK. Telephone 3765-6 Beekman.

CHICAGO OFFICE: 4543 Cottage Grove Avenue.

ILLUSTRATIONS.

Electrotypes of the illustrations used in this paper can usually be supplied by the publishers. Price on application.

YEARLY SUBSCRIPTIONS.

United States and Mexico, \$1.00. Canada, \$2.00. Foreign countries in postal union, \$2.50. Payable in advance. Remit by express Money Order, Draft on New York, Post Office Money Order or Registered Letter.

The address label indicates the date when subscription expires and is our only receipt therefor.

REGISTERED CABLE ADDRESS:

Florex, New York.

ADVERTISING RATES.

One-half inch, 75c.; ¾-inch, \$1.00; 1-inch, \$1.25; special positions extra. Send for Rate Card showing discount of 10c., 15c., 25c., or 35c. per inch on continuous advertising. For rates on Wants, etc., see column for Classified Advertisements.

THE NATIONAL FLOWER SHOW, under the auspices of the S. A. F. O. H., will be held at Chicago, November 6 to 15, 1908. William F. Kasting, Buffalo, N. Y., is chairman of the show committee.

Alex. Dickson & Sons Win Their Case.

The firm of W. Atlee Burpee & Company, Philadelphia, Pa., has received a cablegram from Mr. Burpee, who is at present in England, stating that Alex. Dickson & Sons have been granted the injunction prayed for, and costs have been put on the defendant, in the case, previously referred to in these columns, the particulars of which are as under:

The action was brought by the well-known company of nurserymen, seedsmen and rose growers, carrying on business in Newtownards, Belfast, Dublin, Blackrock, and also in Herefordshire, Eng., for an injunction restraining the defendants, who are also nurserymen, carrying on business at Woodlawn Nurseries, Dundrum, and Parliament street, Dublin, from selling roses and seeds not grown or propagated by the plaintiffs as "Dickson's Roses" or "Dickson's Seeds" or as "Dickson's Irish Roses," and from carrying on the business of nurserymen and seedsmen under the style of Alexander Dickson & Sons, or Alex. Dickson & Sons, or any style in which the name Dickson appears, without taking reasonable precautions to clearly distinguish the business carried on by the defendants from that carried on by the plaintiffs; and also for an account and inquiry as to damages.

The plaintiffs alleged that roses and seeds grown and propagated by them have been largely advertised as "Dickson's Roses" and "Dickson's Seeds," and thereby acquired a reputation for excellence in the home, colonial and foreign markets, and that roses and seeds stated to be Dickson's would be understood in the trade and by purchasers as the plaintiff company's roses and seeds; and they alleged that the defendant, Alexander Dickson, who until February last year carried on business as the Ashbourne Agricultural Company, had, for the purpose of taking advantage of the reputation of the plaintiff company's roses and seeds and appropriating their trade connection, commenced to trade under the name and style of Alexander Dickson and Sons. The defendant firm repudiated all these allegations, and denied that there was any foundation for them.

Alex. B. Scott, Sharon Hill, Pa., the introducer of several of the Dickson roses in this country, went to Ireland recently to give testimony in behalf of the plaintiff concern.

Florists and the Census.

In connection with the forthcoming census of the florist industry in America President Taft of the S. A. F. O. H. has appointed a committee to co-operate with the Census Bureau, to the end that as full and complete statistics as possible concerning the status of the commercial flower business in America may be secured. The matter was brought to the attention of the New York Florists' Club on Monday evening last by Patrick O'Mara, one of the committee, who pointed out that some of the questions propounded by the Census authorities at Washington, on the blanks distributed, were of such a nature as to make them difficult to answer by the men engaged in the trade, and he suggested that the list of inquiries be submitted to the S. A. F. O. H. committee, men familiar with the business in all its details, for revision and emendation. We hope this will be done; and when everything has been put in proper shape, we would endorse Mr. O'Mara's request that all interested make as full and complete responses to the inquiries of the Census Bureau as can possibly be made. This is imperative, if a true representation of commercial floriculture in the United States is to appear in the census records.

The value of such records is inestimable, especially when the S. A. F. O. H. or other horticultural organizations are called upon to seek legislative measures helpful to the trade, or when combatting adverse laws likely to work injury to it. As a case in point may be cited the successful endeavor of the Illinois State Florists' Association in securing from the State Legislature appropriations for the establishment of a greenhouse plant in which to conduct experiments for the treatment of diseases and the extermination of insects on stock grown under glass. This excellent and helpful concession was obtained only after the State law givers had been convinced of the great extent of commercial floriculture, the large amount of money invested in the industry in Illinois, and the necessity of some such undertaking on behalf of those engaged in the business in that State.

It is quite clear that, with respect to previous census returns connected with commercial floriculture in this country, the actual status of the industry has never been correctly recorded, mainly owing to mistaken views held by many engaged in the business concerning the use to which the data asked for and supplied were to be applied. Some thought that the information was to form a sort of basis for taxation purposes, and withheld the desired facts; other equally absurd imaginings were rife, with the consequence that many statistics were not given, thereby impairing the value of those finally recorded. It cannot be too strongly urged that the details regarding which the Census Bureau desires to be informed are for census purposes only, confidential, and in no way will be made public, except as forming part of the sum total representative of the industry in each State; and this, too, without reference to individuals or firms. There is therefore no need to withhold any of the necessary particulars sought; nor should this be done.

As showing the discrepancies that have hitherto disclosed themselves in the matter of statistics, it is on record that in 1895 the estimated number of commercial florists at that time was given as 10,000, with a total area for the country of 50,000,000 square feet of glass devoted to floricultural pursuits. Five years later, the last census year, Dr. B. T. Galloway, Chief of the Bureau of Plant Industry, who then had charge of census matters connected with the trade, estimated that there were probably not less than 9,000 commercial florists' establishments in the United States, with 22,500,000 square feet in all. These two computations, or estimates, being so widely at variance, leave us in the dark as to what the true standing of the industry really was at the period named, and the later figures are apt to incline the reader to the mistaken conception that there has been retrogression instead of progress.

What is now wanted, and will be forthcoming if all concerned will but give the matter the necessary attention, is a census record, reflecting the actual status of commercial floriculture in these United States, regarding the reliability and correctness of which there can not be even the shadow of a doubt.

A note from Richard Vincent, Jr., White Marsh, Md., dated May 1, announces his safe arrival in Paris, France. He expects to reach England by the end of the week. Mr. Vincent says he visited the nursery of M. Briant at Poitiers, but not many of that gentleman's specialties were then in bloom, the season being at least two weeks late.

OUR READERS' VIEWS

Plant Registration by the S. A. F. O. H.

Editor Florists' Exchange:

So much matter has been published of late upon this subject, so much sharp criticism made, and so many have evidently failed to appreciate the purpose of plant registration that it seems desirable that the position of the society upon this point, as understood by its officers, should be made plain.

Many of the recent writers seem to confuse the registration of a name with a certificate of merit. The writer's idea of the matter is that the act of registry has to do mainly with the ownership of the name, and in this connection the value of the plant is of no importance.

The registry of a name is an announcement to the public that a certain person has selected that name for a variety of some class of plants, and equitably vests the ownership of that name in the person registering it, always provided that some other person has not previously selected the same name for a variety of plant of the same class. The value of the plant to which he proposes to apply the name does not enter into the proposition at all. The publication of an application for registry is notice to the public at large, and the main purpose of making such publication is to cause any one having knowledge that the same name had previously been used for a variety of the same class of plants, to make that fact known.

The duplication of names, the writer ventures to assert, has been in ninety-nine cases out of one hundred, a matter of oversight or error and not an intentional deception, and while there have been many cases, since the society first started to register varieties, in which application has been made to register a name previously used for another plant of the same class, the writer does not believe that there has been a single instance in which, when the facts were brought out by the publication of the application, the duplicate name has not been promptly withdrawn and never subsequently made use of by the originator in any way. Everyone will recall numerous instances of this kind during the past few years.

We are not, of course, at this time discussing plant names from the point of euphony or utility. Setting this question aside, the only matters in which the horticulturist is interested regarding the name of a plant is, first, that it shall not be a name which has previously been applied to another variety of the same class; second, that it shall not be a new name applied to a plant which has previously been given another name. The present system of registry which should comprise a scrutiny of names previously registered by this society and a publication in all the trade papers, followed by a publication in the annual report of the society, would seem to be about as far as it is feasible to go in guarding against the first error and has, the writer believes, proved very efficacious so far.

When the time comes that the society has ample funds at hand, has greenhouses of sufficient extent and growing grounds to supplement them, and has in its employ and under its control a corps of expert growers and plantmen and a large collection of growing specimens, as well as a complete herbarium, it will then be in position to investigate matters pertaining to the identity of plants with a reasonable possibility of certainty in the results; but to undertake such investigations, attempt to do such work and assume to pronounce authoritatively upon such subjects now, it will inevitably be led into error, its work will be discredited and more harm will be done in the long run than any possible good which may be accomplished.

The publications of these applications for registry has brought cases of renaming to light in the past and will do so in the future. It is, of course, desirable and is the intent of the society to require full information as to the origin of plants for which registry application is made, and to require a reasonable description of the same, so there are not likely to be many cases in which a second use of the same name will escape the sharp eyes of the many shrewd plantmen who read the trade papers.

While registry is made after waiting a reasonable interval subsequent to publication, yet there is nothing to prevent complaints being filed at a later date, and while the writer is inclined to think that a registry once made and entered must stand unless properly withdrawn, yet in case of a proved error in which the person making the registry refuses to withdraw it, it would be the duty of the secretary to make public in the press and to print in the annual volume in connection with the registry, a full statement of the facts.

It is accepted in all matters of plant naming that priority of publication establishes the name. Registry by the S. A. F. O. H. fixes and records the date at which each name is selected, provides a way to settle authoritatively

May 16, 1908

disputes in subsequent years, and gives notice to all persons subsequently desiring to name plants of the same class, that the name in question has been used and is to be avoided.

The foregoing sets forth as far as the writer understands it, the present intent of plant registry by this society. Further than this under present conditions, it does not seem either feasible or desirable to go. The submission of all applications for registry to the nomenclature committee has been suggested. It might be well to state that the society at the present time has no nomenclature committee, and it would seem a matter of great difficulty to get a committee of this kind, which would have to consist of men of great knowledge and be provided with facilities for growing, comparing and testing varieties. It would seem, I repeat, a matter of great difficulty to get such a committee, who would undertake and carry out the vast amount of work which it has been suggested should be loaded upon their shoulders, as they could be given no adequate compensation for their services.

Another question would be the long delay which would occur before any plant could be registered, and also the hostility of the introducers which would surely follow any attempt to put burdensome restrictions upon them.

It should be made easy to register plant names instead of difficult.

W. N. RHOE,
Secretary.

The Carnation Situation.

Editor Florists' Exchange:

In that part of Edwin Lonsdale's letter in your last week's issue, which relates to carnations, he takes for his text the following words: "The surplus of carnation flowers is bothering the growers thereof quite a good deal." From this text he proceeds to expatiate very interestingly, although not very practically, on ways and means for disposing of said surplus. Mr. Lonsdale takes it for granted that "overproduction" is the cause of the surplus, and I guess he is right in thinking so. There is, in the neighborhood of New York City, at least 50 per cent. more glass devoted to carnation growing to-day than there was a year ago; many carnation growers added a house or two to their plant, while some doubled their area. Many florists who hitherto have been specialists in other lines have turned part of their places into carnation houses, and several large establishments which never produced a carnation before are this year altogether devoted to them. The great demand for carnations and the good prices realized for them last year is no doubt the cause of this. It is to be hoped that those gentlemen who "budded in" will return to their first love; the depressed condition of the carnation market this Winter must have given them the hint that they are on the wrong track.

Mr. Lonsdale suggests "closer relations" between the grower and the retailer, but I am not so sure that the retailer wants any closer relations. He seems to be quite well satisfied with things as they are. He can buy carnations at his own price; the "science of floriculture" does not seem to appeal to him in any noticeable way; the science of buying cheap and selling dear seems to be his strong point and probably has something to do with the curtailed demand for cut flowers of all kinds at the present time.

I don't think the time will ever come when the grower who makes a specialty of carnations, or any other flower, on a large scale will find it either profitable or "advantageous" to advertise his products for the purpose of selling them at retail prices. It would certainly look funny to find Mr. Ward or Mr. Daillouze, with their thousands of square feet of glass devoted to carnation culture, packing a dozen flowers to send to Mongaup or any other "remote" part of the country. I don't think they would reduce their "surplus" to any marked degree by those methods.

I have seen several "slumps" like the present during the last thirty years, but things always seemed to right themselves, and I have no doubt they will do so in the present instance. Those who can't stand it will have to succumb, and the fittest will survive as usual.

JOHN BURNIE.

The Tulip Trouble.

Editor Florists' Exchange:

Your correspondent, Mr. Lonsdale, reports a failure of tulip bulbs to come up to expectations. The cause seems to be an open question. I may, however, state that Girard College is not the only place that has met with disappointment in this respect, as I know of others that have had a similar experience, and have been told of tulip beds that hitherto have not failed, but have done so this year, no doubt from the same cause as Mr. Lonsdale complains of. My advice is, Plant the May-flowering tulips; they are gorgeous in their beauty. The florist who has not a display of these tulips has missed sales for Fall planting.

STRAW HAT.

Officers of N. Y. Cut Flower Exchange.

JOHN DONALDSON, the newly elected president of the New York Cut Flower Exchange, was born near Banff, Scotland, on July 12, 1855, where his father was a farmer. John attended school until he was ten years of age, when he went to work on the farm, remaining there till he reached the age of 18, when he was apprenticed as a gardener at Duff House, the seat of the Earl of Fife, in the neighborhood of his home, where Joseph Mackie was then head gardener. Here Mr. Donaldson remained three years, after which he went to Edinburgh, the capital of Scotland, to Downie, Laird and Laing. Subsequently he worked at Vogrie House, near Edinburgh, as journeyman gardener, going from there to Cowick Park in Yorkshire, England, where he was employed as foreman gardener for two years. Here fruit under glass was made a specialty. John then journeyed to London, and after working for a short period in Veitch's nurseries at Chelsea, returned to Yorkshire, this time to Hutton Hall, the estate of Sir Joseph

Victor S. DORVAL, born in Woodside, L. I., on June 18, 1876. He is the son of the late Victor Dorval, a well-known New York plant-man. The young man started to work for his father at the age of 11, and also sold the cut flowers for him until August, 1905, when his brother and himself rented the greenhouses from their father. Victor became a director of the Cut Flower Exchange in 1903, and succeeded John Donaldson as secretary in 1905, to which position he was re-elected May 2, 1908.

Horticultural Society of New York.

The annual meeting of this society was held at the New York Botanical Garden on Wednesday and Thursday, May 13 and 14, 1908. The election of officers resulted as follows: President, James Wood, vice presidents, J. Crosby Brown, Dr. Hexamer, G. T. Powell, Spencer Trask and Samuel Thorne; secretary, Leonard Barron; treasurer, F. R. Newbold. Members of Council: C. L. Allen, F. W. Bruggenhof, J. W. Cromwell, C. F. Dieterich, T. A. Havenmeyer, E. S. Miller, John E. Lager, E. H. Rochrs, Julius Rochrs, F. L. Atkins, G. V. Nash, N. L. Britton, W. Nilsson, Patrick O'Mara, C. B. Weathered, H. A. Siebrecht, Joseph A. Manda, J. H. Troy, P. R. Pierson, C. W. Ward and A. L. Willis.

Victor S. Dorval,
Secretary.

P. Einsmann,
Treasurer.

John Donaldson,
President.

Officers-Elect New York Cut Flower Exchange.

Pense, where James McIndoe was head gardener, one of the finest places in the north of England. After three years Mr. Donaldson again went to London and secured employment in the horticultural department of the Zoological Gardens, remaining in that position for a couple of years, when he set sail for the United States. His first work in his adopted country was done for the late William C. Wilson of Astoria, L. I.; then with T. B. Hyatt at Winfield, L. I., where he remained six years, leaving to start in business for himself, 19 years ago, at Newtown, now Elmhurst, L. I.

Mr. Donaldson grows principally cut flowers for the New York market, disposing of them at the Cut Flower Exchange.

In 1887 he married Miss Hendry of Port Gordon, Banffshire, Scotland, and has one son and daughter. Alex., the boy, assists his father in the greenhouse business, and recently took unto himself a life partner.

Mr. Donaldson is a member of the New York Florists' Club and of the S. A. F. O. H., being a regular attendant at the meetings of both bodies. He was for many years secretary of the Cut Flower Exchange, with which he has been connected since its inception, being one of the original promoters. He is a genial, typical Scot, and is well liked by all his friends and associates.

PHILIP EINSMANN, Astoria, L. I., the treasurer of the Cut Flower Exchange, is a native of Germany. He served an apprenticeship as gardener in the Royal Gardens of Hesse-Darmstadt. Coming to America in 1890, Mr. Einsmann secured employment with the then firm of Siebrecht & Wadley, New Rochelle, N. Y. From there he went to the now defunct firm of Pitcher & Manda, Short Hills, N. J., and subsequently was in the employ of H. D. Darlington, Flushing, N. Y. In 1895 Mr. Einsmann started in business at Astoria, L. I., leasing the plant of Mrs. Lischke, which he later purchased, in 1904. The whole establishment has since been remodeled. Mr. Einsmann grows plants and cut flowers, making a specialty of Easter stock, besides decorative plants for the Winter market. In the cut flower line his efforts are mostly confined to the raising of bulbous stock, on account of his surroundings.

Mr. Einsmann and his better half do not believe in race suicide; and though but 36 years old, he is the proud father of six boys and two girls, which he regards as an enviable record.

At the annual exhibition there was a magnificent display of orchids, the principal exhibitors being Julius Rochrs Co., W. A. Manda, Siebrecht & Sons, J. Manda, Lager & Hurrell, C. T. Koebling, J. T. Butterworth and Ordonez Brothers. The gold medal of the society was awarded to Mr. Butterworth for Cattleya Mossiae "Mrs. Butterworth." Fuller particulars will be given in next week's issue.

Thomas Green.

Thomas Green, 87 years old, for thirty-one years a resident of Joplin, Mo., died at his home, 2127 Ivy street, on May 3, 1908. For years Mr. Green owned the only florist establishment in Joplin, on the corner of Third street and Byers avenue. The greenhouse since has been razed. He was born in Manchester, England, in 1821, and received his education in that country. In 1867, following the close of the Civil War, he came to the United States.

Shortly before coming to America Mr. Green married Miss Caroline Hathaway Taylor, on the Isle of Man. Miss Taylor was a relative of Shakespeare's wife and a relative of Benjamin Hathaway. Ten years later he came to Joplin. In the early pioneer days he purchased property in what is now the western residence district of Joplin. A few years later he started his flower gardens, and as these prospered opened a greenhouse, in which he raised early vegetables. Before many years had passed the greenhouses extended over the entire half block between Second and Third streets on Byers avenue. Here Mr. Green lived until five years ago, when he sold the establishment and erected a home in South Joplin.

Mr. Green was well educated and possessed of a personality which won him many friends. He had been sick but about three weeks. Old age was assigned as the cause of his death.

His first wife died about ten years ago; he married again and his second wife survives him.

AMONG THE GROWERS

Peter Reinberg, Chicago.

A short journey on the Northwestern Elevated Railroad in Chicago to Robey street station, and a car ride of a few minutes in a northerly direction will land a visitor at the entrance to the largest greenhouse establishment in America, if not in the world—that of Peter Reinberg. Time usually precludes a bench by bench inspection of such an enormous plant, even if one were disposed to undertake the walking necessary, which would entail a trip of several miles. The establishment is in practically five sections and includes upward of 120 greenhouses, nearly all 250 feet long.

Beginning at the north end of the greenhouse area a section of four large houses with three smaller houses is seen, the whole devoted to *Asparagus plumosus*. Adjoining is a large house filled with carnation cuttings and chrysanthemum stock. A southerly course next takes one into the carnation range, which consists of seven large houses. The varieties benched are Beacon, Robert Craig, Mrs. T. W. Lawson, White Lawson, Winsor, Enchantress, White Perfection, White Enchantress, and Rose Pink Enchantress. The latter appears to do very well here, and is a favorite. Mrs. T. W. Lawson shows up rather better than it can be seen in many other establishments; but the benches of all varieties show, naturally, at this time the effects of the recent heavy crop, and the demands of the propagating benches. Eleven houses devoted to American Beauty roses follow on from the carnation range. Several of the benches carry a quantity of young stock.

Rebuilding of benches and planting of young stock has kept the hands pretty busy in this range of late.

A nine house section is devoted to Killarney, Kate Moulton and Mrs. Marshall Field roses. Five of these houses alone are devoted to the latter. The benches present a very fine appearance at this time, the varieties being well in crop.

Next come several houses filled with Bride roses, all the plants in tip-top condition. Carnation cuttings, potted rose stock and young chrysanthemum stock fill eight more houses. The rose stock, of which a large portion is to be offered in the plant market,

Rose Mrs. Marshall Field.

Grower, Peter Reinberg, Chicago.

is very fine, the plants being well rooted, and showing a sturdy growth. A house filled with plants in 2-inch to 4-inch pots, is particularly attractive. Ivory, Mme. Abel Chatenay, Uncle John, and Bridesmaid are grown in large numbers, upward of 25 houses making a grand showing. Richmond is well liked here, 14 houses being given up to it entirely; nine of these houses are in one range and all are in crop. A range of five houses is planted with young stocks, and should prove quite a feature of the establishment about Thanksgiving time.

A block of 21 houses on the West side makes a fine display. Three houses of Bride are in grand cutting condition, many stems touching 9 foot gutters being visible. One of the houses of Bride planted last June from 3-inch pots is particularly interesting and is yielding heavily. Mrs. Marshall Field occupies one of these houses also, and a good idea of its commercial advantages can be obtained in this house. On many of the plants may be counted twelve or more flowering shoots. The house was planted two years ago from 3-inch pots, and the average cut by the Christmas after planting was more than thirty flowers to the plant. This section also includes three houses benched with Bridesmaid, three with Uncle John, which is done excellently here, and ten with American Beauty.

A section of seven houses, on "The Farm," about two miles from the main establishment, is devoted to carnations. This section is to be added to considerably in the near future. The establishment, as far as the growing end is concerned, is in charge of George Collins. All the cut stock is sent in by wagons to the wholesale store at 51 Wabash avenue, which is in charge of Leonard Kill, who is ably assisted by Archie Spencer, and a force of salesmen.

Withhold Watering Device in Operation upon a Side Bench. The Showering Effect is Plainly Seen in the Photograph.

At Peter Reinberg's, Chicago.

GYPHUM FOR WATER LILIES.—For several years we have been using a liberal top-dressing of gypsum (land plaster) to our beds and boxes of lilies and lotus. It is applied to the surface of the soil after the annual overhauling of the pond in Spring, and while it is empty of water. It is used in addition to the other fertilizers and is believed to have a beneficial effect upon the growth of the plants; also to assist in keeping the water clear, and free from green scum (confervae) during the Summer. If these confervae persist in appearing an extremely weak solution of sulphate of copper may be applied to the water with a syringe.—E. D. SUDRANT, Hollywood, Cal.

SLAWED AS A FERTILIZER.—In Jersey, seaweed, or "wraic," is used as a fertilizer, and it is applied either fresh or dried, being scattered as a top dressing over the grass to sweeten the pasturage, or worked into the ground for potato culture. It is valuable for the nitrogen and potash it contains, and also acts mechanically by attracting moisture, an advantage on light, open soils, but a decided disadvantage on cold, heavy land.

The Most Useful of the Cattleyas.

Prepared and Read by George E. McClure, before the Buffalo (N. Y.) Florists' Club, Tuesday, May 5, 1908.

When the lay mind contemplates an orchid, a cattleya is what comes before his mental vision. In fact, we might say that the cattleya is the type of an orchid, not in a botanical sense, but as far as the public is concerned. Fully nine-tenths of the orchids sold in this country are cattleyas, and the genus *Cattleya* will always hold first place as the most showy and useful of the family.

Among the 10,000 representatives of the natural order, Orchidaceae, there are few to surpass the cattleyas in beauty. The genus *Laelia* comes nearest to the cattleyas in point of beauty and usefulness; in fact, the uninitiated cannot discern between the two. The chief difference is an obscure botanical one. The cattleya has four tiny pollen masses, while the *laelia* has eight. This may be said to be the sole difference.

Cattleyas are divided into two fairly distinct classes, and although these classes are being bridged by incessant hybridization, yet in the majority of cases they are fairly distinct.

The first is the monophyllous, or one-leaved class, which is restricted solely to what is known as the labiate, or large-lipped section of cattleyas, of which *C. labiata* is the type. Until quite recently this species was considered to be the sole representative of this group, and the other large-lipped forms as varieties and sub-varieties. Now all of these varieties are considered to be good species, which make the labiate, or more properly speaking, monophyllous section of cattleyas quite formidable in point of numbers.

The other is the diphyllous, or two-leaved class, which includes a large number of species, chiefly characterized by smaller, more numerous and in some cases more fleshy flowers. The diphyllous cattleyas are not nearly as well known to the public as are the monophyllous or large-flowered forms, because they are not as showy and attractive, but some of the gems of the genus are to be found in the two-leaved class.

The cattleya is an American orchid found growing from Mexico to South Brazil. Nearly all of the monophyllous cattleyas are natives of northern South America, while the diphyllous cattleyas are chiefly from South Brazil.

A Mistaken Belief.

The idea generally prevails that cattleyas, and in fact all orchids are difficult to cultivate. This idea is entirely without foundation, being induced by the common belief that there is something uncanny or mysterious about orchids. The cattleya, or orchid, is a very natural plant and will respond to natural treatment as readily as most of our common plants. While it would be a mistake to say that the culture of a great many varieties in the same greenhouse would be easily accomplished, yet a little study and observation would enable any enthusiastic amateur to secure excellent results with the well-known cattleyas.

Greenhouses specially built for cattleyas are not necessary; any light greenhouse, which is not too high, will prove suitable. The plants need not occupy valuable space on the benches, but may be suspended from the roofs of greenhouses devoted to a mixed collection of plants, when a temperature of from 60 to 65 degrees Fahr. is maintained, and in this way will prove an acceptable by-product.

The plants should never be more than four feet from the glass, and less than that is better. The only objection to the system of suspending cattleyas lies in the fact that they are often neglected and become too dry or too wet, at least when suspended high enough to be out of easy reach. Whenever bench room can be afforded it is well to raise the plants in this manner, as better oversight can be had over them. When the bench system is pursued, there should be a raised, or secondary bench placed upon the regular greenhouse bench. This bench should be made of wooden slats, from one and one-half to two inches wide, and from one-half to three-fourths of an inch thick. These slats should be made into frames four to six feet long, so as to be easily removed for the purpose of cleaning the lower bench. The upper or slat bench should be raised about eight inches above the lower, on wooden or iron uprights. The uprights should stand in shallow pans of water to prevent snails or woodlice reaching the plants. A layer of moss or fine gravel should be spread over the lower bench, which should be kept damp to insure a moist atmosphere, which is absolutely essential to the health of the plants.

As Window Plants.

Cattleyas cannot be successfully cultivated as window plants, no matter how bright the window may be, as the atmosphere in the living room is too dry. If the window is encased, after the fashion of a Wardian case, and if sufficient light is afforded, a fair degree of success may be obtained. This is a common practice in Eng-

land, for the raising of cool orchids, and it would be worthy of a fair trial in this country for the culture of cattleyas, as our Summers are hot enough to grow the cattleyas without artificial heat. Any little greenhouse, heated by steam or hot water, could be utilized for cattleyas. A greenhouse heated by a flue would be of no value, because of the dessicated atmosphere which is the inevitable result of this system of heating.

Proper Structures.

If a greenhouse is to be built for the express purpose of raising cattleyas, it should be designed to be as low as possible, and wherever, if the greenhouse is narrow and built to accommodate two stages, the direction in which built is of no consequence; but if the house is high, with three stages and two walks, it should, if possible, run north and south, so that both sides have the benefit of equal light in the Winter, which is very essential. The central bench in a three-bench house is usually broad and should be raised in the middle for economy of space. The raising of the plants in the center stage would shade one half of the plants in the Winter, if the house ran east and west.

Shading.

The matter of shading is an important one. With a small collection, in a small greenhouse, lath frames could be made about the size of hotbed sash, or just large enough to reach from the ridge of the house to the eaves. The rough laths of the plasterers could be used, if strict economy is desired, otherwise, planed lumber would be more desirable, as it could be painted and be more sightly and durable. The laths should be spaced according to their width; there should be as much light as shadow. Laths wider than one and a half inch should not be used. The frames should be merely laid on the glass but not fixed to the house, as they should be removed in the evening and on all dull days. During the early Spring when such a shade would be too heavy, a temporary shade may be secured by spraying the glass with a lime wash to which a little salt has been added. This shading can be easily removed with a hose, when the lath shading is to be used. No shade should be used in the dull Winter months. When cattleyas are extensively raised, the best shading is obtained by the use of large wooden shades fixed to the roof and made to work after the fashion of the Venetian blind, from the ridge of the house to the eaves. The slats in this should not meet. When closed there should be a space one-quarter of the width of the slat, between each slat. The slats should be not more than two inches wide. Each slat should be attached to a wooden rod, which can be manipulated from the ground. This rod can be so regulated as to admit almost any degree of light required. In dull weather, the only light obstruction is the width of the slat, about one-quarter of an inch. This is a labor-saving device and is far ahead of any shade which cannot be controlled, such as paint or whitewash. The Venetian blind can be made to order at any planing mill at moderate cost, and if properly cared for, painted and stored each Winter, will last many years. This shade is also an insurance against hail.

Culture.

The failure which so often attends the raising of cattleyas is nearly always due to ignorance of the conditions under which the plants grow in a state of nature. Every one knows that there is a wet and dry season in the tropics and many believe that the dry season is more rigorous than it really is. Although the rains cease, the condensing of the moisture in the humid atmosphere of the tropics results in a heavy dew, which sustains plant life during the resting season. This condition is quite different from that of a greenhouse in the Winter, where excessive firing dries up the atmospheric moisture and causes the pseudo-bulbs to shrivel and the plant to lose its vitality. The pseudo-bulbs should never be allowed to shrivel. Water should be given occasionally during the resting season and the plants should be syringed lightly on all bright days. The resting season of the cattleya begins after the flowering period, or after the growth is matured, at which time the temperature should be kept several degrees lower if possible. Retard the growth of the plants as much as possible, and when the new growth appears at the base of the pseudo-bulbs begin to water well and increase the temperature. As the new growths increase in length, water should be given in increasing quantity, but it is well to bear in mind that ten times as much water should be sprinkled over the benches, walks, and under the stages, to create a moist atmosphere, as is given to the plants directly. Abundance of fresh air should be afforded, but the plants should never be subjected to draughts.

As a rule cattleyas should be repotted every two years, and top-dressed every alternate year. The best material for this purpose is orchid peat, osmunda fiber (the roots of the royal fern). It is well to insist on getting young peat from your dealer. It should be of a brownish color. When the peat is old it is very wiry and black and is not suitable. No other potting material is needed for cattleyas. The majority of orchid raisers use a mixture of peat and sphagnum moss, but the moss soon

decays and causes the roots to rot, especially when the watering is done in a careless manner. Sphagnum may be used with peat when the latter is very old and waxy. The advantage in using peat is that it does not decay as rapidly as other materials. Before using the peat it should be chopped with an axe or hay cutter. It should not be chopped very fine and the fine particles should not be thrown away, but should be mixed with the rough, open parts of the peat.

Proper Receptacles.

Although cattleyas are strictly epiphytic in a state of nature, yet, under cultivation, they grow better in pots than on either blocks or in baskets. Baskets are useful and are preferred by some, but the system of mounting cattleyas on blocks or cork bark is very injurious and will ultimately kill the plants. No matter how strong the plants may have been, nor how well they may have succeeded for the first year or two, they will soon dwindle away and die.

Mount the plants in half pots, or what are known as azalea pots. Make the hole in the bottom at least twice as large as the potter has made it and cover it with one large crock, no more. The old system of using a high pot and filling it up with small crocks, merely furnishes a safe retreat for cockroaches, snails and woodlice, the principle enemies of cattleyas. Set the stems of the plants well above the rim of the pot, and ram the peat firmly around the roots. Test the firmness of the potting by holding the potted plant up by the leaves. It should not disturb the plant.

growth is the first indication of the larval presence, and the affected growths must be sacrificed. Latent eyes or buds will start, but will not be as strong as the first growths. The judicious use of hydrocyanic acid gas should control this pest.

Next to the cattleya fly, the cockroach is the most injurious insect enemy. It destroys the flower buds and tender root tips. They may be destroyed by a mixture of corn meal and Paris green placed on the benches, or between the pots. They may also be trapped in wide-mouthed bottles containing a little sweet oil.

Thrips are also very injurious to the young growths of cattleyas. Their presence is made known by the brownish appearance of the young growths. The trained eye may detect their presence before much damage has been done. The discoloration is the after effect of the injury done. To eradicate thrips, spray with nicotine or some other tobacco extract. A good plan is to spray the heating pipes with a very strong solution of the same.

Red spider is sometimes bothersome, but it can be kept in check by proper syringing.

Snails and woodlice are also injurious, but can be trapped with hollowed potatoes set between the pots, or with lettuce or cabbage leaves.

If it is possible to do so, it is well to empty the greenhouse each year for a few days, for the purpose of painting, etc. At this time the house may be fumigated with a double strength of hydrocyanic acid gas to kill all insects. (For instructions in the use of this gas, see Bulletin No. 27, Department of Entomology.) If

The next cattleya of importance, in the order of their flowering, is *C. Mossia*, a Venezuelan species, which is in its prime from April to May. It is a very prolific bloomer and for this reason it does not last long in cultivation, but with ordinary treatment, it will last long enough to amply repay all care and expenditure.

C. maxima, a very distinct plant from Ecuador, blooms at various times during the Winter months. Its lilac flowers and lip lined with purple are very freely produced. It is of easy culture and should find a place in every collection.

C. Mendelii blooms from the end of April to early June and is an excellent orchid, though seldom offered in quantity.

C. Warneri, a fine species from South Brazil, blooms during May and June. This species has been called a geographical form of *C. labiata*, as it is almost identical in color and markings. It differs only in time of flowering, as *C. labiata* blooms in the Fall.

C. citrina, which also blooms during May and June, is a most distinct cattleya, commonly called the tulip orchid from the fact that its three petals, which form the outer envelope of the flowers, and the two petals, which form part of the second series of three, never open as fully as they do in the other cattleyas, and in this way they resemble yellow tulips. The flowers are lemon yellow and the crest of the lip is white. It has a strong odor of citron, hence the specific name. The whole plant has a pendant habit and can never be raised any other way. Its foliage and pseudo-bulbs are glaucous. It is a native of the high altitudes of Mexico.

Conservatory of W. W. Seekins, Duluth, Minn., Easter, 1908.

The potting should take place just before the new growth commences, and while the roots are fairly dry. After the plants have been potted, water should be withheld for several days in order to allow the injured roots to heal. Water sparingly at first.

In topdressing the plants, remove as much of the old peat as possible without injuring the roots, and work a good coating of finely chopped peat over the surface.

Fertilizers.

Manurial fertilizers for cattleyas should be studiously avoided, especially when sphagnum moss has been used with the potting material, as it causes too rapid decomposition with the consequent decay of roots. However, with the system here advocated it is well to use what is known as the "Cookson formula" which is as follows: 3 oz. potassium nitrate; 2 oz. ammonium phosphate, dissolved in 3 gallons of water. Use one liquid oz. of this solution to every gallon of water applied. If this fertilizer is used once each week during the growing season, the plants will be much benefited.

Enemies.

The chief enemies of cattleyas are insects. The cattleya fly is unquestionably the most injurious of these enemies. It is a small insect and deposits its eggs in the young growths of the cattleya plant; as the growths develop the eggs hatch out and the larvae feed on the developing growth, which is soon arrested and stunted. The fly then emerges and proceeds to deposit eggs in other growths. An abnormal swelling of the young

the insects are very troublesome, hydrocyanic acid gas may be used in safe quantities while the plants are in the house.

Cattleyas are sometimes injured by what is known as black spot. This is invariably caused by too much shade, overwatering, or by syringing too late in the afternoon. The foliage of the plants should be dry before evening. However, syringing should be indulged in every bright day to prevent insects from getting a foothold. Give plenty of ventilation whenever possible and there will be little danger from black spot.

The Best Kinds for a Succession of Blooms.

By a careful selection of species and varieties a constant succession of bloom may be maintained. The excellent lasting qualities of the cattleya flowers enable one species to remain in bloom until another begins. The first cattleya of the year to bloom is *C. Trianae*, and its varieties. It is a native of the United States of Colombia and is pre-eminently the best in the genus. It has many distinct varieties, which range from pure white to rose purple. *C. Trianae* begins to bloom in early January and lasts until March. *C. Schroderae*, which resembles *C. Trianae* in size of bloom and habit of growth, is sometimes referred to as a variety of *C. Trianae*. It is lighter in color than *Trianae* and blooms a little later. It is also a native of Colombia and is invaluable, as it is the only cattleya obtainable in quantity, to succeed *C. Trianae* in time of flowering. It blooms from March to April.

and it cannot be raised with a high degree of success unless it is given the shelter of a cool house. The price of this interesting orchid is very low and one or two plants can be raised in the coldest part of the cattleya house during the Winter, and hung under a tree in a moist place during the Summer. In this way it may be kept in health for several years. The fleshy flowers last a long time and one blossom will perfume an entire greenhouse.

During the months of June and July, a number of fine cattleyas bloom. One of the best of these is *C. Warscewiczii*, and its variety *Sanderiana*, commonly called *C. gigas*. It is a native of Venezuela and produces more flowers to the spike than any other of the large lipped cattleyas. The flowers are large and beautifully marked. It is easily recognized by the two yellow eyes or blotches at the base of the labellum. This species should have a very decided period of rest in order to produce flowers in quantity.

C. Hardyana, one of the most valuable of the cattleyas, also blooms during June and July, and is a natural hybrid between *C. Warscewiczii Sanderiana* and *C. Dowiana aurea*, and is of course found in the same localities as the parents, but in limited quantities, and for this reason and its beauty it is highly prized.

Another fine cattleya which blooms during June and July is *C. Dowiana* and its variety *aurea*. The species is from Costa Rica and the variety is from Colombia and it usually blooms a little later than the species. The two forms are very much alike. The petals and sepals are unken yellow, and the lip is very large,

crimson purple and beautifully lined with gold. They are more expensive than most of the cattleyas, but furnish a pleasing break to the prevailing pink and purple shades of the other cattleyas, and may be grown in the coolest part of the East Indian house or possibly in the warmest corner of the cattleya house, as they require a higher temperature than the other cattleyas.

A very fine cattleya of the diphyllous section, from Guatemala, *C. Skinneri*, appears in June and July and sometimes a little earlier. Its purple flowers are produced in great abundance and as the plant is very cheap and beautiful, it is a welcome addition to every collection.

Another cattleya of the two-leaved section blooms during June and July—*C. Schilleriana*. It is a little gem from South Brazil. Its flowers are fleshy and lasting, and are of a dull purplish hue with a little pink in the lip.

C. Eldorado is a beautiful Brazilian species and, as its name suggests, has considerable yellow in the lip. It blooms during July and August.

One of the cattleyas of the first rank blooms during August and September—*C. Gaskelliana*—and it is from Venezuela. Its petals are narrower than those of most of the large-flowered cattleyas, but its lip is large and beautiful. It might be called the best Summer-flowering cattleya.

During these months, August and September, *C. granulosa* also blooms. It is a Guatemalan species, and is very distinct; its fleshy flowers are characteristic of the two-leaved section to which it belongs. Its lip is very striking, white with small purple papillae. Its sepals and petals are yellowish green and the flowers remain in good condition for over one month.

In the month of October, the well-known *C. Loddigesii* and its variety *Harrisoniana* appear. They are almost alike, belong to the two-leaved class and are natives of Brazil. Their pink and white flowers are borne

How to Buy.

The best way to purchase cattleyas, if for a large collection, is by the case, just imported. In this way many fine varieties are secured, including the white and albino forms. When only a few plants are wanted, it is best to buy some unestablished plants from reputable dealers, and in this way there is a chance of getting some exceptional varieties. After the plants have once flowered with the dealer, he is able to select the fine forms, to sell at high prices to those who are eager to secure the best that the market can afford, and for this reason the unestablished plants are most desirable.

The heavy shipments of cattleyas from the tropics during the past few years, and the limitation of the natural supply, will soon cause the price to advance, and as the demand for cattleyas is increasing greatly each year, we may expect the price to advance at almost any time. However, there need be no very great concern for the cattleya supply of the future. Cattleyas are being raised from seed extensively in Europe and in this country. The high prices now obtained for hybrids will soon be a thing of the past. They will soon be within the reach of those with a moderate purse. The chief advantage in having a collection of hybrids is, that they have no decided period of rest. They bloom more than once each year, and for this reason are cultivated with greater ease.

New Store of W. W. Seekins, Duluth, Minn.

The city of Duluth, Minn., should be proud in the possession of a florist's store as up-to-date in its appointments as the new one opened last December by W. W. Seekins, at the corner of Third Avenue and Superior street. Previously in restricted quarters in a more crowded section of the city Mr. Seekins wisely concluded to change his location to one where the neighborhood

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

Albany, N. Y.

EYES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Boston, Mass.

WAX BROS., 143 Tremont St. Orders for New England States receive our careful attention. We are located in the theatre and shopping district. Telegraph and mail orders solicited. Satisfaction Guaranteed. Established twenty years.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2840 and 4065.

Chicago, Ill.

HAUSWIETH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Dayton, O.

W. G. MATTHEWS, FLORIST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Denver, Colo.

THE PARK FLOREAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Retailers desiring a share of out-of-town trade should be represented by a card in this column.

Store of W. W. Seekins, Duluth, Minn.

on rather long spikes, and they are among the best of their class.

During the months of October and November, two of the finest cattleyas make their appearance—*C. labiata* and *C. Bowringiana*. These two are found in every collection. *C. labiata* is the type of the labiate or large-lipped group, and *C. Bowringiana* might be taken as the type of the two-leaved group, as it is commoner than any other of the small-flowered species.

C. labiata, one of the best of the cattleyas, begins to bloom in October and continues during November. It is of easy culture and can be obtained in large quantities at very low prices. It is a native of Brazil, and is sometimes sold under the name of *C. labiata vera* to distinguish it from others of the labiate class of which it is the type.

C. Bowringiana also blooms during October and November. It is a native of Honduras and much resembles the Guatemalan species, *C. Skinneri*, already mentioned. Its flowers are rose purple with a lighter throat, and many are produced on each spike. It is perhaps the best of the two-leaved class.

The cattleya house during the last month of the year is made bright by one of the most beautiful of all cattleyas, *C. Percivaliana*. Its flowers are a little smaller than those of the other species of the labiate section, but its extremely beautiful lip more than makes up for this slight disadvantage.

Many other fine cattleyas might be mentioned "among the best," but a collection of the above mentioned would give a comprehensive idea of the whole genus, and abundance of satisfaction. If greater variety is desired, forms of the above might be added "ad infinitum."

was better suited to the requirements of his rapidly increasing business, and purchased a lot at the point mentioned, on which he erected a business block which, besides providing accommodation for himself, includes two spacious stores. The block covers an area 100 by 80 feet, of which he has taken a store area, having a frontage of 43 feet with a depth of 10 feet. The other stores are the same depth, and the remaining space is occupied by three greenhouses, the one immediately back of the store being used for a conservatory, in which a magnificent display of plants was made at Easter. The store is finished in mahogany, and has an iron, with mahogany front, 20 feet from end to end. The counters are tiled, and have marble tops. The floor is tiled.

Mr. Seekins also has for supply purposes eleven greenhouses at another point on Third street, all, with the exception of two benched with carnations, devoted to plants, and, in season, to a limited showing of bulbous stock. There are three additional 135-foot houses at Woodland, a city suburb, which are planted to roses, the varieties grown being *Eride*, *Bridesmaid*, *Richmond*, *Killarney*, and *Uncle John*. Mr. Seekins is to be congratulated as the proprietor of one of the finest, if not the finest, store in the Northwest. J. H. P.

There will be a meeting of the executive committee of the American Rose Society on Thursday, May 21, at 1 p. m., at Hotel Marlborough, Thirty-third street and Sixth avenue, New York, to discuss matters connected with the forthcoming June rose show in Bronx Park, and other subjects.

New Conservatory, Garfield Park, Chicago.

What is supposed to be the largest conservatory in the world is the new conservatory in Garfield Park, Chicago, opened to the public at Easter. It practically comprises a range of seven buildings, covering an area 250 by 300 feet. The palm house is the largest of the group, having an area of 85 feet by 250 feet, with the center of its dome 65 feet above the floor. This building, or apartment, forms the front of the group. The next largest building is the aquatic house, which is 112 by 150 feet.

Other buildings, or apartments, are a show house, 50 by 132 feet and a storehouse of the same size; a conifer house, 65 by 86 feet; a New Holland house, 65 by 86 feet; and an economic house, 50 by 97.6 feet. Over 100 tons of steel were used in the construction work, and 300,000 square feet of glass was necessary to cover the structure.

The building was designed by Hitchings & Company, New York, and the contractors for its erection were the Charles E. Carson Company, Chicago, who carried the work to completion in the incredibly short time of eight months from the breaking of ground. The work has been done under the direction of the West Park Commissioners of Chicago, but under the personal supervision of general superintendent Jens Jensen, who has had entire charge of the work, laying out the buildings to conform to his ideas of decorative effect. The total cost of the structures, furnishings and decorations will approximate \$225,000. J. H. P.

Hybrids of *Gladiolus Primulinus*.

Nearly 2,000 hybrids of the new pure yellow *Gladiolus primulinus* bloomed on the Rural Grounds last season as the result of active breeding work since the species came into our hands in the Autumn of 1905, writes Dr. W. Van Fleet in *The Rural New Yorker*. Crosses were made at every favorable opportunity with a great number of selected garden varieties, and with every available species of both Winter and Summer-blooming types. Naturally the main effort has been to breed superior yellow varieties. It was also desired to determine to the greatest possible extent the influence of this very distinct and new species on dissimilar *gladiolus* forms. The results are most interesting, and indicate that *Primulinus* is likely to prove an important factor in developing attractive new varieties. In practically every hybridization thus far verified by blooming, its influence is dominant even over the deepest reds, subduing them to pure, soft and pleasing shades of orange, salmon and terra-cotta, all with conspicuous deep or light yellow throats. With white and light colors the results are still more apparent, showing in shades of cream, buff, ecru, lemon and canary, usually without markings. With yellow there is in almost every instance a deepening of the shade, and generally elimination of the objectionable blotchings and pencilings of contrasting colors that mar most commercial yellow kinds. The ideal massive golden yellow variety is probably not yet attained, though one or two of the new seedlings appear to approach closely the type we have in mind. The blend of *Gladiolus Quartiniensis* with *Primulinus* is particularly harmonious. The strong reds of the former are not conquered, but are modified into unusually acceptable shades of terra-cotta with rich yellow flamings. The vigor of growth is much increased and the season of bloom advanced from early Fall to Midsummer.

Crosses With Winter-Blooming Varieties.

Our work with Winter-blooming species is not so far advanced as with the garden sorts, but crosses with *G. tristis*, *G. alatus*, *G. Watsonius*, and forcing varieties of *G. Colvillei*, *G. ramosus* and *G. cardinalis* have already bloomed, and indicate possibilities of extraordinary improvement in the way of increased vigor, greater ease of management, and the addition of many new shades of color, including the purest of yellows. There can be little doubt that the result of blending *Primulinus* with the dwarf early flowering kinds known, collectively, as *Gladiolus nanus* varieties, will eventually result in the development of superior new kinds of especial value to florists. The hybrid with *The Bride*, the most popular Winter bloomer, is uniformly pure lemon yellow in color. The blooms are from seven to nine to each spike; stems taller and more graceful than the parent. *Delicatissima*, a peach-colored variety of *G. cardinalis*, yields a most attractive flower of uniform ecru—the exact shade of natural floss silk—also borne on fine tall spikes. The *Watsonius-Primulinus* cross is tall, orange with a carlet veining, vigorous, early and

A Section of the Aquatic House.
Garfield Park Conservatory, Chicago.

profuse in bloom. But a single hybrid with *G. alatus* has bloomed at this writing, though hundreds are under way. It is a remarkable novelty, deep yellow, with picotee markings of crimson at the edges of the widely opened blooms. The Winter-blooming kinds generally have soft corms, difficult to keep long out of the soil, but the new hybrid varieties, with scarcely an exception, have solid, large corms that appear to possess excellent keeping qualities, and are unusually prolific of increase. The most obvious defect of *Primulinus* hybrids is exaggeration of the hooded bloom of the type, but this is absent in some of the choicer varieties secured, and may be expected to grow less conspicuous in future generations of dilute hybrids. *Gladiolus primulinus* has already shown its ability to infuse new and desirable qualities into the best known strains of *gladioli*, and as it is now in the hands of clever plant breeders in all parts of the world, it is likely to become the parent of a most valuable new race.

New Garden *Gladioli*.

It is scarcely possible to test all new varieties of this popular plant that increases each year in public favor. The most that can be done is to try a few of the promising ones. The following kinds bloomed last

Summer for the first time on the Rural Grounds, though some have been in commerce for several years.

GOLDEN WEST.—Plant dwarf and stocky, fine spikes of well-opened flame-colored blooms, spotted in the throat with golden yellow. This variety has good substance and well endures sun and wind. It appears to belong to the *Nanceianus* strain of *Saundersii-purpureoauratus* hybrids, but is of American origin.

HOHENZOLLERN.—Strong, tall grower, with upright foliage, long dense spike of sulphur yellow flowers, with darker center, edges flushed with pink. A fine light yellow variety.

NEGRO PRINCE.—Deep blood red flowers, with velvety sheen; spike large, blooms above medium size. Plant moderately vigorous and an early bloomer. This would have merit if the blooms had greater substance, but they were scarcely able to endure our July sun.

SILVETTA.—Tall and vigorous, with broad foliage, very large widely opened blooms, borne on extra long spikes; cream white with carmine, blotches in throat; blooms late in August. The last three varieties were distributed from a Holland nursery. They are of nearly pure *Gandavensis* type. The succeeding five kinds originated in the celebrated nursery of Lemoine et Fils, Nancy, France, and are among the best yellow varieties of the *Purpureo-auratus* race.

HENRI LEMOINE.—Dwarf, but vigorous in growth, flowers of moderate size, well opened, petals fluted at margin, chrome yellow, with flesh colored blotches in center.

HENRI DE SAUSSURE.—Early and slender in habit, fine well-filled spikes of light yellow bloom, pale crimson in center.

SOLFATARE.—Good vigorous plant, sulphur yellow blooms, with dark brown-purple blotch in center; quite late in blooming.

TRANSVAAL.—Clear chrome yellow bloom, blotches chestnut brown; of good habit, but not vigorous in growth.

COLVILLEIDES.—A hybrid between *Gladiolus tristis* and a yellow garden variety; narrow upright foliage, blooms clear deep yellow, with dark central blotch; flowers early in July and can be forced again for Winter blooms. This is a most distinct variety, and would have much commercial value if it propagated freely, but it does not form seeds, and produces only a scanty supply of cormels.

HARVARD is a tall, large flowered, dark red variety, introduced by a Boston seedsman. It has been claimed that it will supersede the now well-known *Gladiolus princeps*. Our trial corms were not of full size, which may account for their very ordinary showing. Another year will be needed to make a fair comparative test.

Sulphur King was tried in quantity and found to be a real advance on Canary Bird regarded before as the best commercial yellow variety. Sulphur King is more upright in growth, with less tendency to produce crooked spikes. The color is warm sulphur yellow, with deeper throat. It is handsome in the garden, and most excellent for cutting. The three American varieties, Isaac Buchanan, Canary Bird and Sulphur King form a remarkable progression. All are of the same *Gandavensis* type, and especially the same in body color, but the red markings so abundant in the old Isaac Buchanan are almost eliminated in Canary Bird, and apparently altogether so in Sulphur King, rendering it the purest yellow kind in commerce. It is offered by J. L. Childs, Floral Park, N. Y., in whose nurseries it appears to have originated.

New Conservatories at Garfield Park, Chicago, Costing \$160,000.

Cincinnati.

News Items.
George Walker, superintendent of the flower market, is recovering from his attack of pneumonia.

Miss Annie Ruttle, 16-year-old daughter of Mr. and Mrs. Robert Ruttle of Covington, Ky., died May 9. Funeral services were held Tuesday, the 12th. Mr. and Mrs. Ruttle have the sympathy of the craft here in their sad bereavement.

The great May festival is past, and for style and music left many pleasant memories, but, from a florist standpoint, was a severe "frost."

W. A. Chalfant of Springfield, Mo., was a caller. He, with four ladies, were here for the week attending the festival. Martin Roukauf was also in the city.

Charles Dieterich of Maysville, Ky., was a caller May 11, and reports the "night riders" still busy, with the Ohio State troops patrolling the Ohio side for about forty miles. I am afraid this night rider business will cause some bloodshed before it is over. This morning's papers, May 11, report them committing depredations in Indiana, near Aurora.

J. Charles McCullough says the seed business was never better, and they are now making good money on clover seed. Ben Delaney, who is one of Mr. McCullough's road men, is all smiles. It's a ten pound daughter and all are doing well. Ben was handing out the cigars May 7. E. G. G.

Syracuse, N. Y.

Trade Notes.
Trade conditions are very quiet; in fact, it is some years since a similar state prevailed. For the past three weeks the weather has been cold and a great deal of rain has fallen, which has retarded all Spring work; as a result carnations remain in the houses and no attempt has been made to put out bedding plants. As soon as the weather becomes settled everyone will be rushed, as there is a great deal of holding out to be done; in fact, the florists are looking for a very heavy demand and have prepared accordingly.

Arbor Day was more generally observed than heretofore by the city and district schools, but tree planting had to be deferred, owing to the rain. Your correspondent gave an address to the students of Fayetteville High School in the morning, and a talk to the children of a district school in the afternoon. H. Y.

FOR SALE OR RENT

TO LEASE—For five years, five greenhouses heated by hot water, house with seven rooms, in good condition. The place is situated at Elmhurst, N. Y., 15 minutes from Thirty-fourth Street Ferry. No stock to buy. Apply to Beaulieu, Woodhaven, N. Y.

FOR RENT—Greenhouses, best modern construction, prime condition, stocked with roses, carnations, chrysanthemums, etc.; 50,000 feet glass, location Eastern Pennsylvania; good local trade; easy access to city markets. Terms reasonable. Address, Rose, care The Florists' Exchange.

FOR SALE—On account of my husband's death, desirable greenhouse plant directly opposite Spring Forest Cemetery, Binghamton, N. Y. Large and increasing demand for funeral designs, horticulture and bedding stock. A dwelling house, 10,000 feet of glass; a paying business. Apply to Mrs. Katherine Pully, 47 Spring Forest avenue, Binghamton, N. Y.

FOR SALE—Chance of a lifetime. On account of my husband's death, I desire to sell the business and property which consists of eight hotbeds filled with different plants as the market here requires. Also cottage with eight rooms and barn, five acres of land in good condition, besides hotbeds and two hot-water boilers in good condition. If interested, please address, Mrs. Hugo Book, 10 College Street, Worcester, Mass.

FOR SALE—A fine opportunity to acquire a flourishing florist business, consisting of two lots, 22x136 feet each, being the third and fourth lots from corner of Court House square, in very heart of city; two-story frame building with 7 feet brick basement, coal bin under 12 feet cement sidewalk, 1,500 feet of glass, one house 20x200, stocked with carnations; one house 20x200 containing full line general bedding plants, one house 22x24 containing palms, ferns, etc., and one propagating house 12x22. Everything in prime condition. This property is located in city of Valparaiso, one of the oldest and most cities in the vicinity and 45 miles from Chicago, having 10,000 inhabitants, three railroads and one of the finest universities in the country. It being a residence town, a panic does not affect it. There are many good surrounding towns to draw trade from, and a fine chance to run a seed and nursery business in connection, there being no opposition of any kind to speak of. Will sell this property, stock, fixtures, etc., if taken within thirty days, for \$4,500.00. Will make reasonable terms. Address or call, A. Loudenberg, 55-57 Indiana avenue, Valparaiso, Ind.

CLUB AND SOCIETY DOINGS

AMERICAN ASSOCIATION OF NURSERYMEN - Annual convention, Milwaukee, Wis., June 19-27, 1908. - Arrangements have been made with the Chicago, Milwaukee & St. Paul Railway for special coaches and parlor cars for our exclusive accommodation on train leaving Chicago from Union Passenger Station, Canal and Adams streets, at 11:30 a. m., June 19. This train carries dining car (service a la carte) and arrives Milwaukee at 1:30 p. m. For the accommodation of those wishing to remain in Chicago for luncheon, arrangements have been made for special coaches and parlor cars of train leaving at 1:50 p. m. This train arrives Milwaukee 3:50 p. m.

Members are requested to advise C. N. Souther, General Agent, Passenger Department, C. M. & St. P. Ry., 315 Marquette Building, Chicago, by postal card or letter, the train they will leave Chicago on and also the number in their party, so that ample equipment can be provided, also special train if required.

Tickets from Chicago to Milwaukee and return (rate \$3.49) can be purchased in Chicago at City Ticket Office, 95 Adams street (near Dearborn street) and at Union Passenger Station. All coupon ticket agents sell tickets via the Chicago, Milwaukee & St. Paul Railway. When purchasing your ticket be sure that it reads via this line from Chicago to Milwaukee and return. Passengers holding through tickets and arriving in Chicago on lines not entering Union Passenger Station are transferred to that station in rubber-tired omnibuses free of charge, a short and pleasant ride through the business district of the city.

As the subjects to be discussed at this convention are of vital importance to all members of the association, it is hoped there will be a large and enthusiastic gathering.

CARL CROPP, for Vaughan's Nurseries,
BENJ. E. GAUG, for Peterson Nursery,
Committee of Arrangements.

Approved:
J. W. HILL, President,
Geo. C. SEAGER, Secretary.

Arrangements have been completed for the exhibit of such nursery stock, fruits, flowers, tools, implements and supplies as are used largely by nurserymen, and we invite your co-operation and request an exhibit from you.

The exhibition held in connection with the convention last year was a success from every standpoint, and the exhibitors were unanimous in their views that they were more than repaid for their expenses in sending the exhibits. Several exhibitors took extensive orders right on the ground and reports since received indicate numerous sales made later as a result of the exhibition.

The association will provide suitable exhibition room and will make no charge for space. All exhibits must be delivered to the exhibition hall free of charge. If you wish to arrange for the placing of same in the hall, the committee will attend to it for you and see that it is properly packed and returned to you at the conclusion of the meeting, and in such cases, you will be charged with actual expenses in connection with the handling and drayage of same. Your advertising cards will be placed on the exhibit to the best advantage, but, of course, must be furnished by you.

If you wish further information, please correspond with the undersigned, as all arrangements must be made in advance, and no exhibits will be accepted or arranged for after June 1.

Dreshertown, Pa. THOMAS B. MEEHAN,
chairman.

AMERICAN ASSOCIATION OF PARK SUPERINTENDENTS - The executive committee of this organization met at Buffalo on March 21. President J. F. Cowell in the chair. The following names for membership were presented and recommended favorably to the next annual meeting: F. W. Barclay, superintendent of parks, Wilkesbarre, Pa., and Daniel H. Ellis, superintendent of parks, Bridgeport, Mich. A resolution was adopted that the president and secretary be made a committee to prepare a letter to Park Commissions asking them to send representatives to the annual meeting and to pay their way. The treasurer's report showed a cash balance of \$224.53.

After a free discussion it was decided to hold the next annual meeting in the West Hotel, Minneapolis, on August 11, 12, 13 and 14 next. The following is the preliminary program prepared by the executive committee:

August 11, 9:30 a. m.- Business meeting; 2 p. m. Business meeting; papers and discussions; 7 p. m. - Visit to Lake Harriet. August 12, 8 a. m. Visit St. Paul park system, with a concert at Coma in the evening. August 13, 9 a. m.-Visit Minneapolis park system; 7 p. m.-Business session; papers and discussions. August 14.-Visit to Lake Minnetonka.

Papers were suggested on the following topics: "Concessions," "Oiling and Dust Laying," "Concrete in Park Work," "Park Commissions and Administration."

On return from Minneapolis members of the Society of American Florists can stop at Niagara Falls and attend that meeting. The committee on closer relations with allied organizations reported that by meeting near the time of the S. A. F. the park men had done all they

could, while the S. A. F. maintains its avowed attitude of a trade organization. Suitable resolutions on the death of R. H. Wandler were adopted.

Secretary Mulford is desirous of obtaining a complete list of the executive officers of municipal parks, and asks those who can supply it, to furnish him with the following information: The name of your park commissioner, or the chairman and secretary of your board or commission. Also the names of the following officers: General superintendent, assistant superintendent, engineer, forester, superintendents in charge of particular parks or special lines of work.

New York Florists' Club - A fairly well attended meeting of the club was held on Monday evening, May 11. President Weathered in the chair. Harry O. May presented resolutions on the death of Miss Dean, daughter of James Dean, Freeport, L. I., which were adopted and a copy ordered sent to the bereaved family. The transportation committee to the S. A. F. O. H. convention, and the outing committee, each reported progress. In connection with the latter it was stated that advertisements for the program and donations as prizes were being liberally received, and an enjoyable event is assured.

Chairman Rickards of the House Committee asked that exhibits of flowers be as liberal as possible for Ladies' Night on Wednesday evening, May 27; also that he be advised at the earliest possible moment as to the number of ladies and other friends each member will bring on the occasion named. This promises to be a most enjoyable evening; good talent has been provided, and all the ladies and gentlemen present will partake of the dainties furnished. Mr. Rickards' address is 37 East Nineteenth street.

Tile Greenhouse Bench.
Manufacturers, Camp Conduit Co., Akron, O.

The following were elected members of the club: Fred. W. Lentz, W. G. Badgley, Anton Schultheis, Jr., E. Howard Smith, Charles M. Lind, and Thomas Kerr. Candidates for membership, B. Chadwick, Alex. Donaldson, August Millang, John Miesom, Alex. E. Hogg and John Herlihy. The resignation of D. Wittpen was received with regrets.

Beaulieu, Woodhaven, N. Y., exhibited blooms of a white daisy and of Mme. Perret pansies, for which he received the thanks of the club. President Weathered administered a mild rebuke to the exhibition committee for the paucity of exhibits, also to the essay committee for its remissness in having no speaker for the evening.

Mr. O'Mara referred to the desire of the S. A. F. O. H. to co-operate with the Census Bureau in obtaining a full and complete census of the florist's industry in the United States. President Trendly has appointed a committee for this purpose. Mr. O'Mara, as a member of that committee, believed that the list of questions asked by the census authorities contained several that were difficult to answer by the trade, and was of opinion that these questions should be submitted to the S. A. F. O. H. committee for emendation. He urged that the fullest information be given by the florists throughout the country on the matters with which the Census Bureau desired to be made acquainted, pointing out the value of correct and complete statistics concerning the business, and assured all that the data supplied was confidential and would be made use of in no other way than for census purposes. He thought the statistics relative to private plant growing places should also be included in the aggregate as showing the true status of floriculture in the United States. Remarks on the subject were also made by Messrs. Butterfield, Wallace, Lenker, Schultz and Weathered.

Mr. Lenker referred to the fact that San José scale was present in his locality on trees and shrubs belong-

ing to private individual, and that the State is, possibly, apparently did not consider such infested stock as coming under the regulations applicable to commercial nurseries. He was advised to bring the matter to the attention of the Commissioner of Agriculture at Albany, N. Y.

Vice-President Marshall gave an interesting account of the progress of the bowling contest for the Trendly transportation prizes, after which the meeting adjourned.

The American Rose Society.

June Show at Bronx Park Botanical Garden, New York City.

A conference was held in New York City last week relative to the June show of outdoor and other roses. This meeting decided the date to be in the middle of the last week in June. President Simpson and others of the American Rose Society and the committee of the New York Horticultural Society attended the meeting.

There has been a strong inclination at all gatherings hitherto to emphasize the desirability of the June exhibitions and this year it is proposed to carry it into effect. "A Rose for every Home, a Bush for every Garden." At the time of the year when this motto can be brought to the eyes of a larger gathering than at any other period of the year, the American Rose Society invites the attention of all its members to this affair, requesting especially growers of outdoor roses of any and all varieties to be on hand; and, furthermore, would be pleased to receive the support of any friends in the way of prizes for this show.

A word to the growers: Remember that this is a popular show thrown open to thousands of people who at this season of the year gather for miles from the most populous suburban and most densely settled district in all America and this means cultivating business. So we want the rosarians of New Jersey, all of New York, Connecticut, Massachusetts, Pennsylvania and Maryland, with as many from Ohio and farther West as practical, to send on what they can.

We want the rich men's estates, with their wealth of beauty and their educated gardeners, to lend a hand to contribute to the glory of the products of "the leafy month of June" the coming rose show next month.

BENJAMIN HAMMOND,
Fishkill-on-Hudson, N. Y. Secretary.

Tile Greenhouse Bench.

Editor Florists' Exchange:

There seems to be very much interest shown by growers all over the country in some permanent bench material to take the place of wood. It is evident that a permanent bench that can be easily put up is what is called for. Tile bottom floors used on various kinds of framework have been used successfully for years, and I want to tell, through the columns of this journal, my experience with tile bottoms. I am using tile, replacing the wooden bottoms as fast as they rot out. The tile I use is specially made for the floor or bottom. It is 2 inches thick, 12 inches wide and 2 feet long. I secure this tile and split it myself, and support the same on a wooden frame. I use 2x3's. At the joints of the tile I run a coat of mortar to keep the drip off of the wooden support. The tile makes a nice level surface. The drainage is perfect and my plants are very thrifty.

Tile has been known or acknowledged for years as one of the best materials for growing plants on. I have just received a circular issued by The Camp Conduit Company of this city, showing a tile for the floor, the same as I am now using, but I note that they also make a tile post and cross support upon which they place the bottom or floor tile. Judging from the experience I have had in splitting and setting the floor tile, I am quite certain that their claim that two ordinary skilled common laborers can erect from 700 to 1,000 square feet of bench, including the splitting of the floor tile, in a day is correct. Even though it should take a little longer, the cost of erecting the bench is so low that the bench should meet with great favor among the growers. These people say they will be glad to send a circular to anyone interested, or give any information about tile construction.

I have noticed a few articles recently on cement bench construction, but from what I can learn it is rather expensive, and it is hard to secure the proper drainage. There is also objection to the one-piece bench on account of not being able to make any changes after your bench is once in place.

I am very much interested in any article on the bench subject, and I hope that there may be a general discussion.

EDMUND SCHWEITZER,
Akron, O. Prop. North Hill Greenhouses.

LIKE THE BEE

So is Godfrey Aschmann, the Philadelphia Hustler, Never Idle

Secure Bargains Now for Decoration Day

Come and see for yourself. Look around, then think what wonderful work has been done since Easter. Is it possible? Yes, Aschmann together with his trustworthy family and employees who stand him faithfully by, get it done. They do like the bee that carries the dust from one flower to the other. You, what you have seen, carry the news to your neighbors. Every hole and corner now full, ready for immediate shipment.

From the lands afar, where the choicest are, I gather the plants I supply; Or grow my own, with care unknown. So the best are the ones you buy. Then send in your orders and see your trade grow. None can surpass Aschmann's, wherever you go.

GERANIUMS. S. A. Nutt, John Doyle and mixed colors, 4 in. pots, \$7.00 per 100.

AGERATUM. dwarf blue, best bloomer, 4 in., \$5.00 per 100.

BEGONIA Vernon, finest strain, as dark as blood. Seeds of this beautiful variety picked by myself from specimen plants in Zurich, Switzerland, 4 in. pots, \$8.00 per 100; 3 in., \$5.00 per 100.

BEGONIA, new improved Erfordi, the true variety. Seeds are gathered by myself in Europe; nothing can beat this beautiful variety, either in brilliancy or in blooming, as it is always in flower Summer and Winter, 4 in. pots, \$10.00 per 100; 3 in., \$7.00 per 100.

SALVIA or Scarlet Sage. I only grow one variety, and that is the true Clara Bedman or Bonfire variety, of medium tall habit. A whole bed planted in mass is a sight to see when blooming. It looks as if the whole bed is on fire; hardly any leaves are visible. This variety decorates all the gardens in the capitals of England, France, Germany and Switzerland. The seeds of this novelty are collected by myself in Switzerland; therefore, I can supply the pure stock, 4 in., \$10.00 per 100.

HELIOTROPE, 4 in., \$7.00 per 100.

FUCHSIAS, best varieties, 4 in., \$7.00 per 100.

CANNAS, 10 best French sorts, including the dark-leaved varieties, large plants, 4 in., \$8.00 to \$10.00 per 100.

COBÆA Scandens, 4 in., 10c.

IVY, Hardy or English, 3 feet high, 4 in., staked up, 10-12c.

VINCA VARIEGATA, 4 in., \$10.00 per 100; 2 1/2 in., \$5.00 per 100.

COLEUS Golden Bedder, Verschaffeltii, Queen Victoria, 2 1/2 in. pots, \$3.00 per 100. Fancy varieties, \$1.00 per 100.

GERANIUMS, Mme. Sallerii, 2 1/2 in., strong, \$1.00 per 100.

PHLOX DRUMMONDI GRANDIFLORA, 2 1/2 to 3 in., \$3.00 per 100.

CUPHEA or Cigar Plants, 2 1/2 in., \$3.00 per 100.

LOBELIA Compacta and Trailing (Crystal Palace), 2 1/2 in., \$3.00 per 100.

TRADESCANTIA, 2 best varieties, \$3.00 per 100.

THE WEEK'S WORK

Timme's Timely Teachings.

Hydrangeas.

June propagation from tip cuttings of field-grown hydrangeas furnishes the best of medium-sized plants for the following year's Memorial Day trade. It is for that occasion growers should not fail to provide annually to a somewhat greater extent in stock of this class than they are in the habit of doing for Easter, since the demand for well-grown, not over large hydrangeas of the hortensis and otaksa types for cemetery decoration far exceeds the call for and sales of similar stock, large or small sized, at any other time throughout the flowering season of greenhouse grown hydrangeas. Left-over plants from Easter, unsold hydrangeas now past their prime as salable plants, should be cut back to about half the length of their branches, less severely as the season advances, and not any at all after the latter part of June. If pruned down too closely or too late in the season, next year's bloom-producing wood is cut away and instead of it a luxuriant growth will spring forth from around the base of the old wood which will not come into bloom until a year later. Continuous pot culture keeps Hydrangea otaksa in better form, especially if the plants have attained considerable spread and size, than the planting out in the free ground of borders, of urns or the field. The younger stock is easier cared for and greatly invigorated by being grown in field rows during the Summer months, and it is now the right moment to guard as far as possible against unshapeliness in the growth to be made there, by judicious pruning. Neither these nor the plants remaining in tubs or pots should be trans-shiped from their present safe quarters to the open, until all danger from injury by inclement outdoor conditions is past. The stock most in need of faithful attention at present are the Memorial Day plants.

Memorial Day Trade.

Retail florists and growers for the general trade in bedding and potted plants have come to regard the business as transacted before, at and after the close of this month of sufficient importance to be well prepared for its coming. Were they less anxious to be in perfect readiness for the time, when their season of harvest is naturally at its height, they would prove sadly deficient in all the qualities that characterize men of business. The fact that Memorial Day happens to come at that busiest of periods should therefore furnish no cause for urgent calls to be prepared. The kinds of stock grown especially for that particular phase of trade are few and call for the same amount of good care and regular attention good growers are wont to bestow on whatever they raise. All species of the more common greenhouse and bedding plants are in demand for the decoration of graves and cemetery lots; all sorts of pot grown flowering plants are looked upon as most appropriate, and are bought in untold numbers. Hardy evergreen creeping and trailing plants are also largely used, and of these the small and large-leaved English ivies are most favored by all classes of people. Large numbers of lobelias, phlox, verbenas, torenias and similar flowering plants of low growth are disposed of, while the sales in bright colored foliage plants, especially those of service in carpet bedding, have fallen off in late years. A certain amount of business is always done in made-up floral pieces, flat bunches, interspersed with plentiful green, crosses and wreaths being most called for. Last—and this time also least—in line to be enumerated as material employed in the adornment of the final resting places of beloved friends and relatives, are the many kinds of tinware, metal wreaths, cast-iron floral

designs and brightly painted, fadeless flowers, works of art, raised in factories and growing in popularity.

Plants for Stock.

This is a good time to select from among the plants, now soon to be beyond the grower's reach, the very best in all respects to be reserved as stock plants for future propagation. Of some kinds quite a number must be set aside for this purpose, of others but a few are needed; but in every case these should be the finest, the thriftiest, most floriferous of their kind, the ones certain to be selected by the first customer happening to want a dozen or two of that variety. To merely mark or label them is not sufficient; the better plan is to carry them away at once, out of sight of every buyer, if possible. It saves needless explanation and in many instances the plants also for the grower's own use. The inevitable picking out of the best from a fairly even graded lot of plants by home buyers is one of the nuisances every retail grower must put up with. By being the first on the scene of contest in securing his stock plants the grower's anger at seeing the example, set by himself, followed by every one after him, should be appeased to the extent of finding little fault with the universal scramble for the best.

Wallflowers.

Many are the kinds of plants grown for a spirited retail demand that never cease a spark of pleasant surprise to light up the searching eyes of buyers. Really new things in the plant line, strikingly attractive and of unquestionable merit, are as scarce as diamonds—and cost as much sometimes. It is then up to the resourceful grower of market plants to find a way out of the dilemma. To be up-to-date means to be years ahead of time; but it also means to be plucky enough to draw from undeserved obscurity into the light of present day recognition favorites of bygone times. Of such wallflowers are none the least worthy of rehabilitation. Well-grown potted plants of the best dwarf English varieties are as new to most people of our present generation as anything but recently discovered or bred into existence, and, as a rule, the old-time charmer is greeted with numbing delight, while the latter merely arouses a sort of passive interest. The culture of the wallflower is of the simplest. From now until the middle of June the last sowings are made, preferably under the closed and darkened sashes of a cold frame. In about a week the seedlings are up, when air and light is admitted, the sashes to be laid off entirely in fine weather. If sown thinly no transplanting is necessary before the seedlings are large enough to be set out in fairly good garden ground. By next Fall they will have grown into nice, compactly-shaped bushes usually studded with buds. They are then potted up into rich old compost, placed in frames, held somewhat close for a few days and ultimately removed to a cool, airy greenhouse before heavy frosts occur. Their time of flowering, dependant on when the seeds were sown, is from Midwinter until away into the beginning of the hot season.

Forcing Varieties.

While a fine strain of English wallflowers furnishes the best subjects for pot culture, for being forced in moderate heat into blooms for cutting, the French single-flowered varieties are the kinds to grow. They also are sown from about March until June, to have a succession of crops, and are afforded the same treatment during the Summer while making growth, including good field cultivation, as the old English sorts. But, when grown in quantity—as has been done in late years with no less in the way of adequate remuneration than is to be expected in the culture of the best paying of cut flower crops the plants, instead of being potted up when lifted from the field in late Fall had better be planted in the soil of a bench, that in which chrysanthemums were grown being as good as any. Thus it is possible to wedge conveniently in between chrysanthemums and Spring work an easily raised, profitable crop.

Stocks.

In much the same manner as wallflowers the better strains of Fall and Winter-flowering stocks are raised, and the value of their flowers for cutting and that of the plants for pot culture have in recent seasons induced many to devote considerable space to their culture. Seeds of these, and of the annual Ten Week stocks also, can from now on be sown in freely exposed seed beds somewhere about the garden, and will there sprout into a sturdier life than on any other place enclosed by wood and glass. Transferred to the field and given good tillage they will show buds in time to be potted up or bunched before frost can hurt them. The doubles, easily distinguished from the single-flowering plants by the form of the buds, are the only ones worth housing, unless the grower intends to raise his own seeds from an exceptionally fine strain not likely to be obtained from any other source of supply. From single-flowering stocks alone can seeds be raised, the doubles having no part whatever in the production of seeds. The percentage of double-flowered plants from a trade package of good seeds of Ten Week and Brompton stocks, as now to be purchased, often runs high, while in the case of English wallflowers the reverse obtains. But singles in wallflowers come very near to being as desirable plants as the double-flowering, which latter may, if deemed needful, also be perpetuated by cuttings which at this time of year root quite readily. FRED. W. TIMME.

May Exhibition.

The annual May exhibition of the Massachusetts Horticultural Society was held in Horticultural Hall on Saturday and Sunday, and while not as extensive as on some former occasions, still there were a number of fine exhibits. Hardy bulbs have not been as fine in this locality as last year, consequently exhibits of these were lacking in quality. Perhaps the finest exhibit of bulbous stock was the collection of Spanish irises put up by George Page, gardener to Mrs. Frederic Ayer, R. & J. Farquhar & Company had an extensive collection of tulips, including all of the best early varieties. W. W. Rawson & Company made a display of tulips, which included many sorts. The Harvard Botanical Gardens (Robert Cameron, gardener) staged an extensive display of hardy Spring and bulbous flowers. Displays were also made by W. S. Spaulding (Mr. Coles, gardener); by Wm. Whitman (Martin Sullivan, gardener), and by Langwater Gardens (W. N. Craig, gardener).

One of the finest exhibits in the hall was a vase of forced phlox Miss Lingard from W. N. Craig. The spikes of this fine variety were immense and far superior to any that could be grown out of doors.

J. T. Butterworth had on exhibition a beautiful plant of Cattleya Mossiae "Mrs. Butterworth" which received a first-class certificate of merit. Mr. Butterworth also made quite an exhibit of lily of the valley in pots.

In the prize collections the principal exhibitors were James Crosbie, who was the only exhibitor of calceolarias, Martin Sullivan, W. N. Craig, Mrs. E. M. Gill and J. L. Smith.

There was a much finer exhibition of vegetables than is generally shown at this season, one collection, that of Mr. Coles, including peas, beans, tomatoes, squash, corn, etc., all grown under glass.

News Notes.

Israel Quint has disposed of his greenhouse property on Shawmut avenue and has bought a lot near Warren street and Humboldt avenue, where he intends building two houses and continuing in the general retail trade as formerly.

One of the best examples of planting of Spring-flowering bulbs may be seen now at the Harvard Botanical Gardens, where Mr. Cameron has used them extensively through his hardy border. His collection includes many fine species of narcissi, tulips, muscaris, fritillarias, etc.

Charles Evans is having a fine lot of well-grown hydrangea plants at the market these days.

H. H. Barrows & Son have a nice supply of Nephrolepis Whitmani, which has a steady demand for well-grown plants. George Cartwright handles the Boston end of their plant trade.

McMullin had a novelty in the shape of pots of crimson clover in his window last week which was quite an attraction.

Club meeting Tuesday night next; come and hear F. E. Palmer on "The Art of Selling." J. W. DUNCAN.

Worcester, Mass.

Outside work is coming on rapidly now; grounds are being laid out and considerable hardy stock is being planted. The stores that sell plants as a side line are spreading out their goods as if they meant business, but it is a little early for this vicinity. The florist stores will not show much bedding stock until another week.

Lange shows some remarkably fine kalimias this week. Specimen plants in 10-inch pots covered with bloom.

Several of Worcester's oldest residents passed away this week. Among the floral tributes sent out was a noticeable one from Littlefield, being a huge wreath of boxwood interspersed with English primrose. The arrangement of such a small flower with the coarse boxwood was so tastefully done that it brought out many compliments from expert designers and reflected much credit on Mr. Randall, who did the work. Another piece deserving mention was a floral harp, 4 feet in height, designed by Mr. Crothy at F. B. Madans' store.

Sargent laid out a large pansy bed in the office grounds of the Northern Emery Wheel Company last week, it being in the shape of their trademark.

At Hugo Book's greenhouses there is one house of white carnations—Boston Market—with a crop just coming on

which will be a valuable asset at Memorial Day.

At the Worcester County Horticultural exhibition last week H. F. A. Lange showed six plants of the new *Salvia Zurich*, an early and prolific bloomer, inclined to a dwarf growth, with long spikes of bright red flowers. E. W. Breed showed some fine specimens of hyacinths, outdoor culture, on which he took first premium.

Lewis, the new florist, shows a good deal of enterprise in his venture uptown; his window displays are constantly changing and attract large crowds, both outside and inside. One of the prettiest this week was a large fountain throwing countless streams high in the air, falling in spray into a sparkling pool, covering rocks and mosses, wherein were swimming goldfish. The arrangement called forth much admiration.

Several of the growers in this section have adopted the method of growing their carnations inside during the Summer. At the Worcester Conservatories they have already planted one house of Beacon and another of Winsor. The result of this method last season was highly satisfactory.

C. D. Thayer has a house of sweet peas and mignonette right in their prime.

A. L. Bemis is showing some extra good stock of shrubbery at his new office and exhibition ground on Park avenue. RUNABOUT.

Newport, R. I.

Trade Notes.

The nursery trade is again favored with a late season in this section, giving ample time for the handling of stock. While the past Winter was not what is considered a hard one, yet some shrubs which are generally thought hardy were badly winter killed; among these are the hypericums, and some of the viburnums, notably Sieboldii. The unusually high winds experienced since the Spring opened have been very trying on young, newly transplanted stock.

At the New England nurseries V. A. Vanieck has been unusually busy, his only trouble being in not having enough of certain items to meet the demand. The local call is fully up to the average and his shipping trade away ahead of last year's.

At Stewart Ritchie's greenhouses everything is in apple pie order as usual. His new carnation house is completed; it is up-to-date in every particular, is built to stand, the materials being cement, iron and glass. His carnations to

fill the houses are now in the field and looking first-class. He proposes in planting to use but one variety—Enchantress. Mr. Ritchie is now busy preparing for his vegetable and flowering plant trade. He is now picking some sweet peas of the Burpee strain, which show fine flowers on long, stout stems and the foliage is extra fine, being quite distinct from the ordinary.

The dahlia growers report a good demand for their favorite flower; both Messrs. Sisson and Mannel are kept on the jump putting up orders. The double cactus varieties appear to be most in favor.

Some of our gardeners have discovered a new pest in the stem of the native rhododendrons a borer doing the damage which has usually been charged to winter-kill. A good plan with this new pest is to cut out and burn all parts affected. ALEXANDER MACLELLAN.

CHAMPAIGN, ILL. The plans for the new horticultural experiment building are now drawn and are to be given to contractors for bids within a few days. The building is to cost \$10,000, and in addition to a greenhouse 200 feet long, will have a boiler room, work room and general office space.

WELCH BROS.

226 Devonshire Street, TELEPHONES 6267 and 6268 Main BOSTON, MASS.

New York.

News Notes.

Consignors of cut flowers to this market have received a letter from the American Express Company's agent, which reads as follows and which is self-explanatory: "We beg to inform our patrons that under the classification now filed and effective May 20, 1908, to obtain the nominal charge for transportation of returned empty packages, which were shipped when full by express, such packages must be delivered at or taken from the company's depot office by the owner.

"Where request is made that wagon service be rendered in connection with such packages, it will be furnished at offices where the company maintains wagon service, but a charge will be made of 10c. per hundred pounds (pound rates) with minimum of 10c. per shipment in addition to the charge for transportation, and where such wagon service is rendered at point from which the empties are returned, the entire charge must be prepaid, and no further charge will be made at destination."

The weather was extremely warm this week and its effect on indoor-grown flowers is very perceptible. Carnations, particularly, are off color and not so lasting. His friends in the trade will be sorry to learn that John Whalley, who for some years was arboriculturist in Prospect Park, Brooklyn, subsequently being associated with the Andorra Nurseries and recently coming back to live in New York City, died a short time ago from rheumatism of the heart.

The Horticultural Society of New York held its annual meeting and exhibition at the New York Botanical Garden on Wednesday and Thursday this week. At the Wednesday afternoon meeting Dr. B. T. Galloway gave a lecture on violets.

A. J. Guttman moves to-day (Saturday) from 13 West Twenty-eighth street to his new location, 32 West Twenty-eighth street. George Salford will occupy the store vacated by Mr. Guttman,

At a dinner given by Phil. Kessler in the Moquin Restaurant last week to the newly elected president and directors of the Cut Flower Exchange, George C. Watson of Philadelphia, who happened to be in town on that day, was one of the invited guests.

Chas. P. Millang, florist of Bayside, L. I., filed a voluntary petition in bankruptcy last week, with liabilities of \$7,242.97 and assets \$4,787.15.

Ant. C. Zvolanek will make a trip to California after Decoration Day, probably about June 1 or 2, to inspect the sweet pea crops.

The protest of A. Herrmann against the customs decision on hollow heads and figures of earthenware has been sustained, G. A. 6229 (T. D. 26915) being followed.

Philadelphia.

Around Town.

Mrs. M. A. Garrett, 2636 Germantown avenue, is trying to have the best equipped retail store on the avenue, and from present appearance it looks as though she would have her way. The entire inside of the place has been torn out and the masons, carpenters and painters are renovating it. The color scheme is white and gold and the general appearance will be very pleasing.

Win. A. Wyatt, 236 North Thirteenth street, reports a large number of sales on Saturday of white carnations and found that he had not laid in enough to supply the demand.

Sunday, May 10, was a day set apart in which to honor the mothers of our country, and large numbers of men, women and children were wearing a white carnation. Special services were held in the local churches and Sunday schools commemorative of the universal debt owed to mothers. The florists welcomed this feeling, as thousands of white flowers were sold on Saturday and the demand exceeded the supply; several were caught unprepared and had but little stock on hand when it was too late to obtain more.

The Quality Shop (Bacharach's), at Fifty-ninth and Market streets, gave away about 1,500 white carnations and every motorman and conductor on the cars passing this corner was given a boutonniere to be worn on Sunday.

The "Sign of the Rose" shop, opposite the Bellevue-Stratford, had a very attractive window display—a bowler of carnations and dogwood. Mr. Fox says that hundreds of people stopped, looked, and then came in and purchased a white flower for "Mothers' Day."

"Mothers' Day" was first set aside by a Philadelphia woman in memory of her mother; on this day she wore a white carnation, because it was her mother's favorite flower, and she petitioned Congress to have the day regularly set aside for purpose of a memorial to the great "mother spirit," but Congress refused to do so. She is Miss Anna R. Jarvis, 2031 North Twelfth street.

Arthur E. Schroeder has been located at 32 South Fortieth street for nearly two months and reports business much better than he had expected. Mr. Schroeder has a very nice store and has named it, "The West Philadelphia Flower Shop."

One of the busiest stores in the center of the city is that of F. Herbert Steinmetz, 61 North Eighth street, who has a large transient trade, also a lot of design work, of which he makes a specialty.

Monday, May 18, will be celebrated in the public schools as "carnation day," and some good orders are being placed now with the commission houses in expectation of another good day's business in this flower. Each pupil will be furnished with a white carnation in the morning and will wear it through the day.

H. Bayersdorfer & Company have just received a large shipment of bric-a-brac and table decorations, also some extra nice cemetery vases, of which they have an unusually fine display. The vases are of the non-corrodible type and have proven ready sellers. P. M. R.

New Orleans.

News Notes.

The members of the New Orleans Horticultural Society, with several guests, including the Hon. Martin Behrman, mayor of New Orleans, were the guests of A. Alost, florist at Rose Villa on Gentilly avenue, Sunday, May 3. The Joseph Steckler Seed Company supplied the vehicles which conveyed the party to their destination. A stop was made at the establishment of Herman Doescher to inspect his new range of greenhouses and his crop of cucumbers, among which are several promising new varieties; the party complimented Mr. Doescher upon his success. A second stop was made at the large orange and pecan grove of Gustave Seeger, which the members found instructive as well as interesting. Arriving at Rose Villa the party was introduced to Mayor Behrman and the banquet was begun. C. R. Panter, secretary of the society, was made toastmaster, and a very enjoyable time was spent. Mayor Behrman thanked the society for having invited him and electing him an honorary member. Among the speechmakers were Charles Eble, president of the society; Professor A. H. Rosenfeld of the Crop Pest Commission of Baton Rouge, Joseph Steckler and others. After an entertainment in which all took part, which consisted principally of singing, the guests thanked Mr. and Mrs. Alost, their son and two daughters for their royal reception and departed for their various homes.

A second shipment of orchids consisting of eight cases, from James A. Newsham, arrived in first-class condition. Mr. Newsham is expected home the coming week and writes that he is bringing sixty additional cases with him.

After experiencing two weeks of scorching weather the thermometer took a drop of about 30 degrees and we have been having rather pleasant even if unseasonable weather for the beginning of May. CRESCENT CITY.

Detroit.
Trade and News Notes.
The dull weather of last week has reduced the cut to such an extent that a most healthy market condition has been brought about. Several weddings and bouquets helped to exhaust the supply.

Maurice Wolff, a peddler, had some space rented at a fashionable ice cream parlor for the sale of flowers, and the proprietor seeing how much business he did decided to sell the flowers himself, and now friend Wolff is on the street again.

While this is nothing new, another great question is behind it. We all have strong grounds for disliking the fakir and still his existence is justified and in many instances is a necessity. True enough, he not only disposes of local surplus, but also imports from other cities; this may be justified by his right to prolong his existence when his local supply fails temporarily. All in all, the fakir is a substitute florist and not being engaged in any other legitimate business he helps to prevent loss to the grower and popularizes our product among a class of people which otherwise would allow their dimes and quarters to run into other channels of commerce.

Much more serious to the local trade is the supplying of flowers by wholesalers, in other cities to a man who is established in the legitimate business of selling candies and ice cream. A lot of surplus carnations from another city is dumped here at rock bottom prices to compete with stock purchased by florists, probably from the same wholesaler, at regular market prices. This seems to me a gross violation of business principles; and I doubt very much if wholesale candy houses would unload their surplus at rock bottom prices to florists to enable them to carry on a ruinous competition against legitimate retail candy sellers.
FRANK DANZER.

Pittsburg.

Trade News.
Trade conditions have changed but little the past week, being very dull, with only a little more funeral work than usual. Stock seems plentiful, varied and low-priced. The past week's weather was as bad as that of the preceding one—rain every day—and the plantsmen are getting uneasy about trade, as nothing is moving out, and it also means a few hard weeks before Decoration Day to get rid of stock.

John Bader spent some days in Richmond, Va., the past week.

George W. Sloop, State orchard inspector, gave several public demonstrations for the suppression of the codling moth in the orchard of J. W. Nesbit, a few miles from the city. The mixtures used in spraying were fully discussed, as well as the prevention and destruction of other orchard fungi and pests. This is part of the work undertaken by the State through Professor H. A. Surface to demonstrate modern methods of orchard management.

William Hamilton, who resigned as park superintendent of the North Side a few weeks ago, was presented a fine Turkish rocking chair by the employees of the North Side parks, who had served under him for some years.

Club Notes.

The May meeting of the Florists' Club was well attended considering the busy time of the year, and a fair display of plants was shown. The subject was "Bedding Plants." The exhibitors were N. Madison, gardener to Mr. R. Boggs, who had a magnificent plant of *Caleolaria hybrida* with yellow flowers so plentiful that the leaves were barely visible. Frank Cook, gardener to Mr. J. A. Park, showed a *Dendrobium thyrsiflorum*, with three grand spikes of bloom, and a fine plant of *Mignonette Defiance*. F. Bartsch staged fine bedding stock, such as verbenas, petunias, geraniums, sweet alyssum, etc. The Schenley Park conservatories had herbaceous *calceolarias*, acalyphas, three varieties fine for bedding, *Abutilon Eclipse* and *alternanthera*.

At the next meeting in June outdoor blooms, such as peonies, roses, etc., will be shown, and the private gardeners will have a competitive display for which prizes will be awarded. This is the first on the list of the schedule of exhibits for prizes by the private gardeners and calls for 12 peonies and 12 roses (outdoor) and we shall undoubtedly have a grand display, as there is considerable rivalry among the private gardeners here.

The Pittsburg Rose & Carnation Company is again making preparations for new buildings on its farm at Bakers-town; several large houses will be put up this year. Fred Burki, president of the company, spent a few days in Cleveland, O., the past week.

E. C. REINEMAN.

CONCORD JUNCTION, MASS.—A beautiful sight is the immense field of pansies in full bloom at the establishment of Leonard Cousins, Jr., the flowers in so many and varied colors and handsome markings, and very large. Some 250,000 plants are grown, which are sold to florists all over the eastern part of the United States. All the pansies grown by Mr. Cousins are from seed of his own raising. Each year the largest blossomed plants are set aside and from these the seed is gathered, thereby always keeping the stock up to the highest standard of excellence. Pansies have been a specialty with Mr. Cousins for a great many years, and his superb strain is the result of considerable careful and painstaking effort.

ALBANY, N. Y.—The Albany Florists'
Club met May 7 at H. G. Eyles',
South Knox and Morris streets. Charles
Sanders, foreman for the establishment,
exhibited a seedling geranium with bright
scarlet flowers of unusual size. He told
of his life work also in an interesting
manner. In about two years he would
have completed half a century in the
occupation.
John J. Walsh, head gardener at
Washington park, and J. Lang were
elected members.

WINONA, MINN.—A recent killing
frost in this locality destroyed garden
truck, flower beds and other outdoor
products. The frost will likely mean a
heavy loss to gardeners.

A proposition to hold a club picnic
during the Summer... a decision, and
the project approved by a motion, which
was carried unanimously. The arrange-
ments for the same were, also, by mo-
tion, referred to the sports and pastime
committee.

The proposed change in the by laws,
changing the date of meeting to the
first Thursday in the month was ratified.
Before adjournment refreshment was
served, and an hour socially spent.

Trade Notes.
Griffith, the North Avenue Florist,
the style under which a new re-
tailer has opened up at 100 East North
avenue. Mr. Griffith was formerly con-
nected with a prominent department
store, and has had considerable experi-
ence in window dressing.

H. L. Philpot of the Chicago Floral
Company, Winnipeg, was a visitor last
week. Ballard G. Shaw, of the Shaw
Fern Company, Pittsfield, Mass., is visit-
ing the trade this week.

At the Lincoln Park Conservatory is
to be seen just now a magnificent col-
lection of Calceolaria hybrida blooming
to perfection. Some very fine pelargon-
iums in variety are also in evidence. A
section is devoted to a display of or-
chids from the Selfridge and Lincoln
Park collections, among the varieties seen
in bloom being Cattleya Mossiae, Ladia
purpurata, and Odontoglossum citreumum.
The show is worthy of a visit from every
florist within visiting distance.

The J. D. Thompson Carnation Com-
pany, Joliet, Ill., went into the hands
of a receiver last week. The business
is to be continued under the receivership,
with J. D. Thompson as manager.

The George Withold Company is busy
rebuilding and improving the south wall
of the section of its greenhouse range
fronting on Buckingham place. Cement
is being used in the construction of the
new wall.

"Carnations and roses free to custo-
mers" was a legend seen in the windows
of several prominent stores in Chicago
last week. An extension of this move-
ment might rob the ash barrel of much
of its consuming power during periods
of glut.

J. H. PEPPER.

Indianapolis.

News Items.
Tomlinson Hall market reports an
improved business over last week. Nu-
merous orders are being received for bed-
ding work; no trouble is experienced in
disposing of high-grade stock at whole-
sale.

Albert Warner, formerly with H. W.
Rienan, has engaged in the retail flower
business; his shop is located at 709
North Alabama street.

The funeral of Nat N. Hill, ex-treas-
urer of State, was the occasion for much
funeral work, both by the local florists
and those at Bloomington, Ind., the home
city of the deceased.

The Ellis meeting, the national Sen-
gefast and other notable events will no
doubt result in much flag work next
month.

Wm. Smith, manager of Bertermann's
baseball team, announces that he is open
for engagements.

Herman Jung is planning a new resi-
dence in Cumberland.

Visitors: Mrs. Schulz, Vincennes,
Ind.; Mr. Endz, Boskoop, Holland.

Cleveland.

Trade News.
Westman & Getz report an excep-
tionally heavy week. Their window dis-
play is very pretty, consisting of the
new light green ware copied after the
Italian Renaissance, and filled with
Spring flowers.

Fred Griffin also reports a good busi-
ness week.

Work progresses finely on E. R. Wil-
liams Company's new range of houses,
five being completed and planted to
roses. Next week they expect to plant
in carnations. They have already set
out 100,000 carnation plants in the field.

The Cleveland Cut Flower Company
has been receiving orders from the West
for about two weeks.

Exhibitions.
NEW HAVEN COUNTY (CONN.) HORTICULTURAL SOCIETY.—The preliminary schedule for the eighth annual exhibition has been issued. The show will be held in Music Hall, 115 Court street, Wednesday, Thursday and Friday, November 10 to 12, 1908, inclusive. Copies of the schedule can be obtained from Secretary Walter Koella, 58 Bishop street, New Haven, Conn.

DES MOINES, IA.—Secretary Esler of the Florists' Hall Association has received from H. Robinson, a recent sufferer from a hailstorm, an acknowledgment of prompt receipt of the association's check in full for the amount of damage he sustained.

Buffalo, N. Y. News Notes.

The Buffalo Florists' Club held its monthly meeting on Tuesday evening, May 5, which was well attended. George E. McClure read a very able paper on orchids. Mr. McClure had a very thorough training in this branch of the business at St. Louis. Owing to his father's fast increasing business in the landscape line, he was called home and has since entered partnership with his father. His paper was very well received by the members.

On the suggestion of the sports committee it was decided by the members to have a bowling tournament to give all the florists a chance to show their ability. It is the intention to keep scores of 15 games to be rolled within eight weeks. It is proposed to select ten men having the best averages, and allow them to elect a captain, and he in turn to select a team to represent the local club in the convention games.

J. H. Rebstock, who has had a store on Main street for the last twenty years, has given it up to do business at his greenhouses on Elmwood avenue.

Roland Cloudsley, who has been with the Wm. Scott Company for the past few years, has leased the store vacated by J. H. Rebstock, and after alterations will conduct it as a first-class flower shop.

S. A. Anderson has been spending the last ten days on a well-earned vacation in Michigan.

E. J. Fancourt of S. S. Pennock-Meehan Company, was in town, as was C. J. Ford, Philadelphia, on his way home from a successful Western trip.

The reading of Mr. McClure's paper on orchids has made the members of the club hungry for other papers in this line. The writer suggests as a subject: "What Colors can be Mixed by the Florists to show Good Judgment in the Blending."
W. H. G.

Rochester, N. Y. Trade Notes.

Owing to the incessant downpour of rain here, business received a serious setback and all outdoor work has been retarded. The advent of cooler weather had its effect in shortening up the supply of cut material, enabling growers to get a better price for it, also giving an opportunity to the retailer to clean up. Since Easter there has been a good deal of funeral work at all the stores, and this with the usual Spring trade keeps all busy.

There is good call here for Primula veris superba, in pots and baskets, plants well set with bloom selling rapidly. Also a good demand for California privet, strong plants of this being hard to obtain.

On a recent visit to the nursery of John Charlton & Sons were seen plants in bloom of anthurus or blue star flower, recently imported. It was a perfect sight, and such a blue, as to hold attention immediately. Here, too, propagation was under way of Baby Dorothy rose; a great future is predicted for this plant, it having been seen by your correspondent under all conditions, and I must say that it is worthy of a place in every grower's establishment. It is a good keeper and flowers profusely.
COCKNEY.

LOS ANGELES, CAL.—Easter lilies sold at from \$1.25 to \$1.50 a plant during the two days preceding Easter Sunday, according to statements contained in a complaint filed April 30 in the superior court by Elmo R. Meserve, a florist, against William Hearle. Meserve says he contracted with Hearle some time before Easter Sunday for the delivery of 950 lilies at 25 cents a plant, the same to be delivered during the last week of Lent. Fourteen lilies, he says, were delivered and paid for at the rate agreed upon. Hearle, according to Meserve, sold the rest of the consignment to other persons at a price about four times as great as the contract called for, and Meserve says he lost \$900 through Hearle's failure to live up to the agreement.—Herald.

THE HOLLY STANDARD ELECTRIC CIRCULATOR

Peters & Son of Hempstead, L. I., say: "Your circulator, new model, installed for us last December gives perfect satisfaction. It heated, without half trying, our three large greenhouses. We figure that in one more season it will nearly pay for itself in saving of coal. No fear of frosts now!" No greenhouse is perfect without it. No greenhouse is out-of-date with it. Send for descriptive catalog to **THE HOLLY STEAM ENGINEERING CO., 135 E. 15th Street, NEW YORK**

Washington, D. C.

Club News. At the last meeting of the Florists' Club, on May 5, in spite of the rain there was a good attendance. Considerable business was transacted, after which one of the best socials ever held by the club was enjoyed. Mr. Oehmler, chief decorator for Gude Brothers & Company was admitted to membership, as were Frank Schlye and T. M. Dunbar. Speeches were made by Wm. F. Gude, N. Hammer, John Robertson and others on topics of interest to the local trade, and Mr. Taylor of the Department of Agriculture sang several excellent songs. Professor Charlemagne Koehler acted in his usual capacity as chief funmaker and was admitted by all to have excelled all previous efforts. President Kramer asked that the florists attend in a body the testimonial benefit which the professor is to give at Rauscher's on the night of May 19, and the indications are that the hall will be filled by a most appreciative audience.

CLEMSON AGRICULTURAL COLLEGE
A. and M. College of South Carolina
W. M. RIGGS, Director.

Dear Mr. Pearce: May 20, 1907. We have just received the larger Tober heater, and within a few days we will install this and return the smaller one to the J. L. Mott Iron Works. We are turning over to our treasurer for payment, the balance due you, which amounts to \$200.00. In concluding this transaction, I desire to express to you my hearty appreciation of the excellence of your work, and the honesty and courtesy of your methods. We believe that we have one of the best greenhouses in the South, and any time that you need a good word, I hope you will not fail to call on us. Yours truly, W. M. RIGGS, Director.
GEORGE PEARCE, - Orange, N. J.

GREENHOUSE GLASS ALL SIZES 16x24 A. & B, Double a Specialty **C. S. WEBER & CO., 10 Desbrosses St., New York**

There will be another entertainment in connection with the next club meeting, which takes place June 2 at Gude's hall, 1214 F street, at 8 o'clock. The entertainment committee appointed by President Kramer is as follows: Wm. F. Gude, chairman, N. Hammer and Frank Schlye. This affair promises even to surpass the last one. The florists' bowling team is practicing diligently; they start a series of 30 games next week, and the best five players will be selected for subsequent match games. This team is to give an excursion to Chesapeake Beach on June 19, and as it has made and has maintained such an enviable record, it is expected that the outing will be liberally patronized, as the proceeds are to be used in the interests of the team. It has at last stopped raining in the District. The cool wave and dark days have shortened up the supply of stock. There is a fair demand. A good deal of hedding has already been done in the city's various parks and also in many private gardens. All garden crops look well, and this is the first season in years in which late frosts have not interfered with the fruit crop. Pond lilies are coming on the market in limited numbers from local sources. **JAS. L. CARBERY.**

WOOD'S HOLE, MASS. On invitation of J. Graveaux of Paris, France, who asked him to contribute his Rambler roses introduced in 1907 for exhibition in June of this year, M. H. Walsh forwarded the plants last January and they were planted in Roseraie de Bagatelle under the care of the prefect of that Department. Mr. Walsh is advised that this is to be an international exhibition of roses introduced in 1907 and 1908, and that the judges would pass upon the exhibition in June. The following varieties were sent: Walsh's Delight, Walsh's Paradise, Walsh's Evangeline, and Walsh's Coquina.

LYNN, MASS.—A. B. Madison, a florist, left his coat in the dressing room at St. Stephen's Church, last week, and while he was absent for a short time somebody stole his gold watch and chain. The police are attempting to recover the stolen jewelry.

BURNHAMS HAVE LARGE STEAM DOMES

NOW, this means that, as the result of this large dome and the deep water ways directly over the fire, "priming" or "water going over into the pipes" is prevented—and you know how important an economy point that is. Hot water or steam. Burn hard or soft coal. Send for the new boiler catalog.

Talks on Greenhouse Material

No. 2

After you have decided whether you want to grow roses or violets the next thing to do is to write us and tell us about how much money you want to put into the greenhouse. Give us your idea as completely as possible how you think the house should be built and the size of it. Tell us all about the lay of your land, whether it is level or has a slope, where you want to put the potting shed and the boiler room, give us the compass points, and in fact make a little sketch if you can. A rough sketch is often of more help to us than a small book of reading matter in a letter. As soon as we get your letter it will be turned over to our architect and a sketch of the house will be made. Then an estimate will be made covering all the material and with it you will get a letter giving our opinion on any features we think should be altered. In this way you will be sure to get the most for your money and a first class house. Why not write us now about the new house? And don't forget to say what you are going to grow.

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION
George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

SEDALIA, MO.—L. H. Archias, president of Archias Seed Store Corporation, and J. C. Archias with Barteldes Seed Company, Denver, will sail from New York, June 1, on the S. S. Amerika for a two months' European trip.

BURLINGTON, IA.—N. J. Burr & Company's specialty is seeds, in packets, which are sold to the stores direct. This phase of the business is very popular in the West, and is considered far more profitable than the commission. They report a very successful Spring trade.

FREDERICKSBURG, VA.—T. W. Wood & Sons of Richmond have purchased 100 acres of land, near Milford, in Caroline County, bordering on the Richmond, Fredericksburg and Potomac railroad, which they will improve and use as a seed farm for supplying their large establishment in Richmond.

BOSTON, MASS.—On Saturday, May 16, there was a blaze just before noon in the storeroom of the H. E. Fiske Seed Company at 12 1/2 Faneuil Hall square. The cause of the fire is not definitely known, and the damage, about \$1,500, was done to the seed, fertilizer, incubators and other goods which were stored on the top story.

NEW YORK—F. W. Bruggerhof of J. M. Thorburn & Company and Captain Burnett Landroth of the D. Landroth Seed Company, Bloomsdale, Pa., started on May 16 for an all-around visit among the seed growing establishments of the Pacific Coast. They will be absent about seven weeks.

L. M. Breit, representing Samson & Pilon, seed growers, Angers, France, arrived here this week, on his annual trip to the United States. During his stay in the country Mr. Breit's address will be care of E. B. Vandegrift & Company, 15 Whitehall street, New York.

ATLANTA, GA.—Here is to be found one of the largest retail seed houses, if not the largest, in the United States. H. G. Hastings & Company, its founders commenced business as seedsman in Florida some fifteen years ago, with the intention of supplying the truckers with the highest grade seeds that could be procured in the markets of the world. Their business from the start was a success, but they soon discovered that a more central position was desirable, and they moved to the Atlanta address, carrying with them the same determination, that the best only, without regard to cost, was the card that would win; and it has. Their business has annually doubled in size. They report the past year's the best they ever had, and the prospect for the coming year all that could be desired.

CHICAGO, ILL.—Montgomery Ward & Company are to discontinue the seed business, having found that a trade which lasts but three or four months in the year is not adapted to department store methods, where stocks must be turned over once in thirty days to be profitable.

Peter Hollenbach & Son, the pioneers of the onion set industry, have had a fine trade in that line; the advance in prices enabled them to work off a large surplus stock at an equally large profit. Their retail business shows a steady annual increase.

W. W. Barnard & Company report a good trade along all lines, but particularly with the truckers and market gardeners.

The S. F. Leonard Company have had a brisk call for onion sets, as well as seeds for the farm and garden.

EXPORTS OF SEEDS, ETC.—May 9 10. Schulz & Ruekgaber, 17 bags seed; Mullus & Ware, two cases plants, May 12. H. Frank Darrow, 36 cases plants, 90 tubs laurel trees; Hussa & Company, four cases plants, 12 tubs laurel trees; C. B. Richard & Company, 16 cases plants, 198 tubs laurel trees; Kuyper & Shields, 20 tubs laurel trees, one case plants; Kraemer & Foster, one case plants; McHutchison & Company, 12 cases plants, 154 tubs laurel trees; Mullus & Ware, 120 packages plants, etc.; P. H. Perry & Company, four cases plants, 10 tubs laurel trees; John Schepers & Company, 43 cases plants, two tubs laurel trees; Vaughan's Seed Store, 22 cases plants, two tubs laurel trees; J. M. Thorburn & Company, five bags grass seed, 30 barrels seed, May 15. Sanderson & Son, two crates plants; Brown Brothers & Company, 218 bags seed, May 16 and 17. J. M. Thorburn & Company, 20 bags alfalfa seed, A. H. Ring & Company, one barrel seed; J. H. Busch & Company, 18 barrels plants; Hussa & Company, one case plants, May 18. Mullus & Ware, 30 cases five plants; J. M. Thorburn & Company, 21 bags grass seed.

EXPORTS OF DUTCH BULBS.—The total exports of Dutch bulbs, in kilograms, to the United States in 1907, was 282,160, as against 2,317,700 in 1906, and \$52,931 in 1907. The total exported to all countries in 1907 was 15,277,000.

Seed Trade Notes.

The weather having again turned warm and seasonable, the small order retail over-the-counter trade, which had been given a sudden check during the cold and stormy days of very nearly the larger part of the first half of this month, has been renewed with great vigor; and every indication now points to the usual lucrative total of May business. Those seedsmen who handle vegetable plants have been all this month doing a large business in them; and one particularly noticeable feature of this trade has been the very large sales of those plants that are not considered the great staples, such as egg plants, pepper plants, etc. There can be no question that this vegetable plant trade, as an adjunct to the seed business, has during the last few years been gathering great momentum, until no longer is it looked upon as a sort of necessary evil; there is a substantial amount of profit to be derived from the sale of vegetable plants. The sales of tomato plants bid fair this season to be much greater than usual; they began very early, and at this writing have reached an enormous volume. I was very recently informed by a plantsman, who has for years been in close touch with the requirements of the larger canners in this line, that the demand for tomato plants from this industry is much larger this season than ever before. It would certainly be very interesting to learn how many million tomato plants are annually put out, but unfortunately there are no statistics on this subject.

It is turning out that almost all varieties of field corn were in much shorter supply than was supposed by even the trade itself. For more than ten days "sold out" has practically been the only answer possible to give customers, who are all prepared for planting this crop. As regards sweet corn there is still some to be had, although such favorite sorts as Country Gentleman and Stowell's Evergreen are about exhausted.

Speaking of exhausted seed stocks, there certainly are a great many of them this year. In beans it is getting to be hard work to find needed sorts. Such standards as Early Valentine and Golden Wax have long since been cleaned up in first hands, and it would now be very difficult to find any large quantity of anything in seed beans. The same general remarks apply to peas; all seedsmen are sold down lower than in years; even seed planting stocks have in many cases been encroached upon to help out customers.

The outlook for the Fall bulb business is gradually assuming encouraging shape, and seedsmen are now placing their orders quite freely. Holland bulbs have of late years become so thoroughly a part of gardening work, that large sales are assured, even if general business is not always up to the top-notch. I am convinced that many dealers have held off longer this year than usual before placing their Dutch bulb orders, not so much because they doubted a good trade the coming Autumn, as because the conflicting general business conditions have made it a very difficult matter to decide just how large the trade will be.

Day by day as the season advances, and the crop conditions continue favorable, on all sides the greatest satisfaction is manifested. During the last ten days the irregular character of the weather has caused some apprehension, as there has certainly been in some sections an overabundance of rain; but, on the whole, all signs so far point to an exceptionally favorable seed growing year.

CATALOGUES RECEIVED.

EDWARD SWAYNE, Co. Price List of Cut Flowers before and after Memorial Day.

E. H. HUNT, Chicago. Price List and Information concerning the efficacy of the "Eucalyptus" Products.

THE NIPPONAMA NURSERY COMPANY, LIMITED, New York. Wholesale Catalogue of Japanese Nursery Stock and Seeds. An interesting collection.

European Notes.

Now that the frost has apparently left us for the season we are able to form a fairly accurate estimate of its effects upon our growing plants, both biennial and annual. It is no exaggeration to say that they have been simply disastrous, and growers are plowing up the ragged remnants right and left.

Readers of these notes have been prepared for this from time to time, but the worst has yet to be told. In another ten days, if present conditions continue, we shall know the best and the worst. In the meantime holders of ruta-baga, turnip, radish and beet should be firm as regards prices; and those who have good stocks of cabbage may count themselves extremely fortunate. Spinach has not suffered so much at present; but peas, especially wrinkled varieties, are doing badly.

German reports state that flower seeds have stood the Winter fairly well, but double wallflowers and biennial stocks are weak.

EUROPEAN SEEDS.

Dutch Bulb Growers' Society.

The following awards were given by the narcissus and mixed bulb committees at the meeting of April 22.

First-class certificates to Narcissus General Baden Powell, a deep yellow trumpet daffodil; Narcissus Sulphur Beauty, with white perianth and clear sulphur trumpet; Narcissus bicolor Dieh, with white perianth and yellow trumpet; Astilbe Queen Alexandra and Astilbe Peach Blossom, both of a handsome rosy pink color, good forcing, free-flowering varieties.

Awards of merit were given to: Narcissus J. H. Krelage, a very early free-flowering trumpet daffodil, with light yellow perianth and pure yellow trumpet; Narcissus Mr. van Noort, a cross between Emperor and Golden Spur, a large flower with broad yellow trumpet and light yellow perianth; Narcissus Sir Henry Campbell Bannerman, with deep yellow trumpet and yellow perianth with rather pointed petals; Narcissus bicolor Giant, with fine, broad trumpet and cream white perianth, a large flowering strong growing variety; Narcissus bicolor Miss Ellen Terry, with clear yellow trumpet and white perianth; Narcissus Snow Queen, a white trumpet daffodil with curling petals; Narcissus Tom, with dark yellow trumpet and yellow perianth, a large flowering variety.

ERRATUM SEED REPORT. It is irritating to read on one's daily calendar poetical quotations about the delights of Springtime, and then to gaze on a bare landscape over which a cold north wind is scattering stray snowflakes. Vegetation in this district is always late in commencing, but this year the tardiness is threatening to beat the record. We are putting contracts out and nursing up our seedlings, but until the meteorological powers give the signal, no start can be made.

Stock-taking after the close of the wholesale season can now be undertaken and results turn out roughly something as follows: Very good sales have been made in lettuce, both Cos and cabbage sorts; peas, celeries, Savoys, chicory, egg plants, and endives, and a satisfactory turnover has resulted in cabbages, kales, Brussels sprouts, kohlrabis, vegetable marrow, capsicums, tomatoes, leeks, parsnips and mangel wurzels; moderate business only has been done in spinach, parsley, carrots and turnips, while the sales of onions, cucumbers, and beans, especially the latter, have fallen below expectations. In carniflowers the Autumn Giant and Algiers varieties have done well, but others only moderately. Radishes have gone off all right, except the Autumn and Winter kinds, which have rather lung fire. With the exception of sage and thyme, herbs are pretty nearly cleared out.

As to the prospect of the growing crops, it is difficult to say much at present, as everything is so backward. Cabbages appear in good form. Leeks look first rate, Celeries, fairly well. Kohlrabis, fair to poor, while carrots vary in different situations. A full report can hardly be given for three or four weeks, when prospects will have assumed a more definite shape.

Flower seed prospects can perhaps be judged with little more accuracy. The Winter has been long with spasmodic intervals of frost and thaw. Such condi-

tions are generally very trying for our over year crops, but fortunately a fairly good snowfall has acted as a protection against the low temperature. Nearly all kinds of perennials and biennials have come through the Winter in good shape, and few shortages are probable, unless May frosts should supervene, which, however, are not frequent in this climate. Pansies, myosotis, single wallflowers, bellis, campanulas, garden carnations, etc., all look healthy though on the small side, while auriculas and primulaceae generally promise well for seedling. Myosotis may yet suffer by frost during the blooming season, but pansies can take care of themselves better in this respect.

As regards annuals, the Autumn-sown ones, such as larkspurs, are coming on strongly, but the Spring-sown kinds are not making much progress. The inclement weather has also checked the development of asters, phloxes and other annuals usually raised in frames, the plants being even now hardly large enough to handle and put out into the fields. Some fine growing weather is now a desideratum, or we shall be badly crowded up in the early weeks of Summer. This wish will probably be heartily re-echoed by other seed growing centers besides Erfurt.—Horticultural Trade Journal, Eng.

NURSERY DEPARTMENT.

Conducted by Joseph Mcchan.

AMERICAN ASSOCIATION OF NURSERYMEN.

J. W. Hill, Des Moines, Ia., president; C. M. Hobbs, Bridgeport, Ind., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

Horticultural Notes.

Beds of seedlings need early weeding for the well doing of the stock. Take a day after a good rain for the work. If not done soon the seedlings are choked out or are pulled out along with the weeds. The best ground for seeds is that which has been well cultivated the season previous, to kill all weeds that would seed otherwise.

The large, bright, rosy pink flowers of the bush honeysuckle, *Lonicera tatarica grandiflora*, ensures it first place among all the family of bush honeysuckles. It is the best of all. Stock can easily be got from soft or hard wood cuttings.

Hardy flowers for Memorial Day uses will be more called for every year. Notice the kinds that find favor with those who buy them, so as to know what to set out in future. Japanese snowball leads all shrubs, next to it weigelas, and many herbaceous plants are useful.

Trees and shrubs set out when in leaf should be permitted to carry a few of their leaves instead of cutting off every one as is usually done. If given lots of water for a few days after being planted they will carry a few leaves. They are more likely to grow in this way than when every leaf is removed.

Hardy azaleas and rhododendrons are often grown in pots for selling late in the season or for decorative purposes. Whether in pots or not they do much better set in a half shaded place in Summer, under large trees, for example.

The ostrich fern, *Struthiopteris germanica*, is a good one to plant where a group is required. It soon spreads from underground stolons; and at all times it is a handsome fern. There is a variety of it in cultivation that rarely or never bears fertile fronds; instead it spreads much faster than the one that does.

Trees, shrubs and vines for layering purposes should be cut back well in Spring, before they push into growth, but better later than not at all. This cutting down causes strong shoots to form the kind layering calls for.

There are several trees which ripen their seeds in Spring, and these seeds sown at once grow immediately, making nice plants by Fall. In the list are silver maple, red maple, red birch, white elm and slippery elm. Spread out the seeds to dry for a week after gathering, then sow them.

All nurserymen tell the same tale, that their business is increasing every year; and everyone can see grounds surrounding handsome dwellings well filled with choice trees on every hand. Horticulture is not only fashionable; it is also loved for its own sake, which is its best feature.

Those who have plants of any kind in pots the hardness of which in Winter is doubtful should plant them in high ground or where there will be no chance of late growth. Short, stocky, well ripened wood will endure cold far better than vigorous shoots.

Virginia Creeper for Walls.

The Virginia creeper, *Ampelopsis virginica*, is a good vine for many walls, but for dwellings it is hardly as good as the *Ampelopsis Veitchii*, because it does not keep as close to the wall as the latter vine does. For walls of barns or walls enclosing grounds the Virginia creeper can be well used, its habit of pushing out shoots free from the wall adding often to its good appearance. The *A. Veitchii* never leaves the wall it clings to, unless it meets some obstruction. Both vines become of beautiful colors in Autumn, the Virginia creeper laying the most scarlet in its foliage and the *A. Veitchii* the most bronze with its crimson. For trees, pillars, walls and other places where a thick heavy growth is wanted plant the Virginia creeper, and set the *Ampelopsis Veitchii* where a close covering of the surface is desired.

These two vines are in demand all Summer long, hence their being kept in pots now all the time for Summer selling, being potted in Spring or in late Fall.

The Northern Limit of *Cerasus lauro-cerasus*.

In a letter from Charlottesville, Va., we are asked how far north the *Cerasus lauro-cerasus*, better known as English laurel, can be grown outdoors, and what would be its chance of success where our correspondent writes from. This evergreen, though commonly called English laurel, is not a native of that country, but of the Levant, and it is not over hardy even in the north of England. What it would do at Charlottesville, Va., has to be tried. There has been a bush or two of it tried in Philadelphia at different times, and, although protected, they all finally succumbed to the cold. One plant lived three years, getting of less size every year until it died. It may have no more cold to endure in Virginia than it does safely in England, but temperature is not all. The cold of England is connected with dampness and cloudiness, all in favor of vegetation, while in Virginia there would be bright sunshiny days with the cold nights, which would add to the adverse conditions the plant would meet.

Maybe Professor Massey can tell us something of its growth in the South. It is hardly expected that it thrives North. There used to be fine ones near the Capitol Building at Washington, D. C.

A polymorphism of the kind used for working the varieties on, the golden-leaved, blood-leaved and others, for grafting and inarching. Seedlings are obtained from Japan for the purpose, and an excellent stock it makes.

Myrica Cerifera, Wax Myrtle.

W. F. Bassett, Hamonton, N. J., writes us to know the prospects of the *Myrica cerifera*, wax myrtle, coming into favor again. He says of the hundreds of fine plants he has he expects the brush heap will have to get the most of them. It is a surprise to hear this, for this shrub has been one always called for heretofore, and time was when it was impossible to secure them. Although a sea-shore shrub in so far that it grows in such situations more abundantly than anywhere else, it is not confined to these locations. It grows in woods quite away from the sea coast and thrives well in them, too, growing North as well as South. In the South it is evergreen, but this character does not abide with it in exposures North. Possibly friend Bassett does not make known his stock to those who might want it, at any rate, we would not advise the burning of it.

Acer Polymorphum.

Acer Polymorphum.

The grounds surrounding the dwellings in the vicinity of Philadelphia are noted for the many lovely specimens of Japanese maples they contain, consequent, to a great degree, on the nurserymen of the neighborhood making a feature of these shrubs. This is especially true of two of the plants, one the blood-leaved Japanese maple; the other the common form, *Acer polymorphum*. It is the latter our photograph represents. It will be observed what pretty, cut-leaved foliage it possesses, and what a good shaped shrub it becomes. It only needs starting right, of good shape, then the rest of the work toward becoming a nice appearing shrub is done by itself. The plant of our notes was set out when quite small at an angle of the dwelling, and it has had hardly any pruning since, but has grown at will.

In addition to its prettily formed leaves there is much to admire in this species when shrubs take on their Autumn colors. The leaves become of a bronze red, sometimes mingled with yellow. When the shrub gets to bear seeds, which it does when of a size the one illustrated is, it produces them in pairs, and they are of a bright red color, adding to the general attractiveness of the shrub.

This and its other varieties, such as the blood-leaved, are really small trees when grown in that shape. Cut away to a single stem, they make height in time to warrant their being classed as trees; but they are used as shrubs nearly wholly, and as such are found highly useful by planters.

In the same letter, he speaks of *Viburnum dentatum* being unprofitable to grow. This is found to be so by many nurserymen, not only as applied to *dentatum* but to *acerifolium*, *prunifolium*, *lentago*, *pubescens*, *Lantana*, and, in fact, to almost all the list excepting the snowball section, and those who handle tree seeds report similarly of them, but little sale for their seeds.

Viburnum Lantana is beautiful the whole season through; first, early in Spring, each shoot is crowned with a flat head of white flowers after which there are clusters of pretty red berries, lasting in good condition until hard freezing weather sets in.

There is one species outside of the snowball section which meets with good sales, the *Viburnum tomentosum*. Its flat heads of mostly sterile white flowers adorn the bush greatly. They appear a short time in advance of the snowballs, and the growth of the bush is rounded and attractive. This kind is selling in great numbers; and as it can be raised from layers or from green wood cuttings in Summer it is not difficult to keep up with the demand for it.

JOSEPH MCHAN.

HAIL INSURANCE. The party from Sibley, Ia., who fails to sign his letter, is respectfully requested to communicate with John G. Esler, secretary Florists' Hall Association, Saddle River, N. J., who will gladly supply all information desired regarding the insurance of greenhouse glass against hail.

ROSES

It is still a little early to think of doing much planting, for though the price of cut blooms is low at present, with June weddings and commencement the demand will increase and the returns improve. The large places have replanting well under way, but with them it is a necessity, as they could not do all their work in one month. Replanting is the hardest and costliest part of the work, especially when bench repairs are considered; still with the improved and economical methods of building concrete benches now devised, this task will be much easier. Every grower should try a few feet of concrete bench, built as described in the trade papers; or, better still, after ideas of his own, then after due trial let his brother florists know of his experience. Thus all will be benefited, and in these times the craft should help each other as much as possible.

If it has not been possible to get the soil for next season in shape, this work should not be put off any longer; and where the heaps have been prepared, they should be chopped down at once. The soil will then be in much better condition at planting time.

As suggested in the last notes, never allow the plants, old or young, to suffer for the want of water, even if they must be watered twice a day. On warm nights leave the ventilators wide open, and if possible a steam pipe turned on; the flowers will then keep their color and size. Fumigate lightly on every favorable occasion at least once a week, though twice is better. Sort over the young stock, allowing the plants a little more room. Discard all weak ones; they will never amount to much and it certainly does not pay to plant them. Do all the watering early enough, so that the foliage is dry by night, or trouble will result; and if very dry when the sun is hot, the foliage will scald—an other reason for watering early.

The flowers should be cut early and placed in water as soon as possible; those cut at noon seldom prove satisfactory to the purchaser. Make sure the water is fresh, as it soon becomes stagnant at this time of the year.

JOTTINGS FOR FLORISTS
BY EDWIN LONSDALE

Bulb Sports Tulips are given to sporting. Flamingo is a sport from White Hawk; in coloring it is a light and dark rose, mingling together. The White Joost Van Vondel has sported a rose-colored flower, which has the same large size and fine shape of the white form. Primrose Queen is a yellow and white sport from La Reine, and Rose La Reine is a delicate rose-colored sport from the same source.

A Late Azalea It is not often that azaleas are needed in flower in the trade after Easter, but if there should be a necessity for such, it would be well to bear Souvenir de Prince Albert in mind in this connection as being an excellent variety for decorative purposes at this season of the year. It is now in bloom, having been brought into a minimum night temperature of 52 degrees from a cold pit April 10 last. It is a free bloomer. The individual flower is not as large as are those of some varieties of more recent introduction, but it is large enough for all practical purposes. The flower is semi-double, and in color it is a cheerful salmon pink, irregularly blotched on the edges of the petals with white. Taking it altogether it is a very useful and showy late variety.

May Tulips What "Straw Hat" says about May-flowering tulips in May 16 issue, page 670, is fully appreciated. They are, as he says, "gorgeous in their beauty." We have grown and flowered them here, but, although they bloom very much later than the early-flowering type they do not flower late enough for our purpose in Girard College grounds. If varieties of tulips that are naturally late could be induced to be at the very height of their glory on May 20 they would be planted to the exclusion of all other varieties or species; but alas! those we have tried—among which were Gesneriana, Picotee, Bouton d'Or, some of the Darwins and Parrots—were all dropping and done for a week or ten days before—so here—that very important day, Plunder's Day—Stephen Girard's birthday!

But the trouble complained about in Jottings, appearing in issue of May 9, was the substitution of inferior varieties of tulips and their blooming at a different time from those that were ordered, causing vexation and mortification, and not whether they were April or May-flowering varieties. With the easy consciences apparently possessed by the unscrupulous exporters they would not hesitate to substitute among the May-flowering varieties as they have done in the earlier flowering sorts.

The Carnation Situation I thoroughly enjoyed reading John Birnie on the "Carnation Situation." He certainly knows how to put a matter to be understood. It was news to most of us outside the neighborhood of New York City to learn that 50 per cent. more glass is devoted to carnation growing to-day than there was a year ago. It is no wonder there has been a surplus. We in Philadelphia have fully realized there were more carnations grown than could be sold to advantage to the grower; but not to the same extent has the glass area for the culture of carnations been increased as it has around New York.

In talking with Robert Kift a few evenings ago about the best way to dispose of large quantities of flowers, he believes thoroughly in advertising. He is using the columns of one of the popular afternoon Philadelphia newspapers. It costs money, he says, to advertise, but he has found it to pay. He went on to say how successful a Pittsburg (Pa.) firm of florists had been in its advertising. Eight hundred boxes at one dollar each had been disposed of in one day, and on another occasion, that of St. Valentine's Day, twelve hundred one-dollar boxes had been sold. "THAT'S GOING SOME!" If I mistake not, Messrs. C. W. Ward

and Eugene Dailedouze would not object to that style of disposing of their product. What has been done in an inland town in Pennsylvania ought at least to be triplicated by the wide-awake florists in and around the great metropolis of New York.

The Shamrock The other evening I saw a small pot filled with the "dear little shamrock." I wanted to learn all about it; how long it had been in the lady's possession and so forth. To which the lady replied: "Ever since St. Patrick's Day." It was given to her at one of the Philadelphia department stores. I wanted to know how she had succeeded in keeping it so healthy so long in so small a pot—2 1/2-inch. "Oh, nothing," she said. I could not understand how that could be, for a plant to look so well in so small a pot and she had had it at least two months. "Well, I have watered it at least every day; I have never forgotten to give it plenty of water on the soil and in the saucer; sometimes it needs watering again toward evening. When I notice the saucer in which the little plant stands quite dry, I pour a little water in the saucer and I find it has all gone next morning." "Well," said I, "do you call that nothing?" "I thought," said she, "that you meant had I given it some plant food or some mysterious treatment."

That lady has solved the problem of taking care of plants in the home. I never forget to give it plenty of water. That is the whole secret of plant growing in the home and it tells the whole story.

Now I am on the subject of the shamrock it may be as well to say that the plant or plants in question bore testimony that the seed had been sown directly in the pot and allowed to grow on in that way, whereas, when I was at the greenhouse establishment of John F. Rupp, Shiremanstown, Pa., last January, there the shamrocks were growing a single plant in a 2-inch pot, and a neat, thrifty plant it was making; but this is by far the most expensive way of growing this popular little plant, both in the time it took to grow a given plant and the handling thereof. The seed was more an item of expense in the Philadelphia production.

In passing I must say that Mr. Rupp's place was conducted very systematically and was in the pink of condition. "A place for everything and everything in its place," was strictly carried out.

Chinese Primroses Mr. Rupp's place has been famous for years for its superior strain of Chinese primroses for commercial purposes, and the plants that were set aside to be used for seed saving were of good colors and size. Mr. Rupp assists the flowers in pollination so as to insure as far as possible a good crop of seed. Who would imagine that it takes four months after the flowers are fertilized to perfect and ripen the seeds? That's what Mr. Rupp says, and my own experience the present season substantiates that statement.

Now is the time to place your orders for
BEGONIA GLOIRE DE LORRAINE, CYCLAMEN and POINSETTIAS
I am well equipped to supply the above in any quantity at the following prices:
BEGONIA GLOIRE DE LORRAINE, 2 1/2 in. pots (leaf cuttings), \$15.00 per 100; \$140.00 per 1000.
CYCLAMEN, 2 1/2 in., \$5.00; 3 in., \$7.00; 4 in., \$15.00; 5 in., \$20.00.
POINSETTIAS, 2 1/2 in., \$5.00 per 100; \$45.00 per 1000.
Satisfaction guaranteed.

LIKE THE BEE

So is Godfrey Aschmann, the Philadelphia Hustler, Never Idle

Secure Bargains Now for Decoration Day

Come and see for yourself. Look around, then think what wonderful work has been done since Easter. Is it possible? Yes, Aschmann together with his trustworthy family and employees who stand him faithfully by, get it done. They do like the bee that carries the dust from one flower to the other. You, what you have seen, carry the news to your neighbors. Every hole and corner now full, ready for immediate shipment.

From the lands afar, where the choicest are, I gather the plants I supply; or grow my own, with care unknown. So, the best are the ones you buy. Then send in your orders and see your trade-grow.

None can surpass Aschmann's, wherever you go.

GERANIUMS, S. A. Nutt, John Doyle and mixed colors, 4 in. pots, \$7.00 per 100.

AGERATUM, dwarf blue, best bloomer, 4 in., \$7.00 per 100.

BEGONIA Vernon, finest strain, as dark as blood. Seeds of this beautiful variety picked by myself from specimen plants in Zurich, Switzerland, 4 in. pots, \$8.00 per 100; 3 in., \$5.00 per 100.

BEGONIA, new improved Erfordi, the true variety. Seeds are gathered by myself in Europe; nothing can beat this beautiful variety, either in brilliancy or in blooming, as it is always in flower Summer and Winter, 4 in. pots, \$10.00 per 100; 3 in., \$7.00 per 100.

SALVIA or Scarlet Sage. I only grow one variety, and that is the true Clara Bedman or Bonfire variety, of medium tall habit. A whole bed planted in mass is a sight to see when blooming. It looks as if the whole bed is on fire; hardly any leaves are visible. This variety decorates all the gardens in the capitals of England, France, Germany and Switzerland. The seeds of this novelty are collected by myself in Switzerland; therefore, I can supply the pure stock, 4 in., \$10.00 per 100.

HELIOTROPE, 4 in., \$7.00 per 100.

FUCHSIAS, best varieties, 4 in., \$7.00 per 100.

CANNAS, 10 best French sorts, including the dark-leaved varieties, large plants, 4 in., \$8.00 to \$10.00 per 100.

COBÆA Scandens, 4 in., 10c.

IVY, Hardy or English, 3 feet high, 4 in., staked up, 10-12c.

VINCA VARIEGATA, 4 in., \$10.00 per 100; 2 1/2 in., \$5.00 per 100.

COLEUS, Golden Bedder, Verschaffeltii, Queen Victoria, 2 1/2 in. pots, \$3.00 per 100. Fancy varieties, \$4.00 per 100.

GERANIUMS, Mme. Sallerol, 2 1/2 in., strong, \$4.00 per 100.

PHLOX DRUMMONDI GRANDIFLORA, 2 1/2 in., \$3.00 per 100.

CUPHEA or Cigar Plants, 2 1/2 in., \$3.00 per 100.

LOBELIA Compacts and Trailing (Crystal Palace), 2 1/2 in., \$3.00 per 100.

TRADESCANTIA, 2 best varieties, \$3.00 per 100.

DRACÆNA BRUANTI, 6 in., 35c.

TORONIA FOURNIERI, \$4.00 per 100.

TAGETES, or MARIGOLD, Eldorado, 3 in., \$3.00 per 100.

DIANTHUS, or Chinese and Japanese Pinks, 3 in., \$3.00 per 100.

MOON VINES

Don't forget we lead the world in Moon Vines. We are the growers and wholesale shippers of the famous Ipomœa Multiflora. Fully 20,000 are grown and shipped by us to every city of every state in the United States and to Canada and Mexico. Have a reputation in this variety for the past twenty years, and the record shows that the amount demanded every year grows enormously. This favorite variety flowers very early, is a rapid grower, blooms freely in big clusters, with pure white waxy flowers as big as a saucer and is very fragrant, 4 in. pots, nicely staked up, 12c.; 2 1/2 in., \$5.00 per 100. Cash with order, please. All goods must travel at purchaser's risk.

THE NATIONAL FLOWER SHOW, under the auspices
of the S. A. F. O. H., will be held at Chicago, Novem-
ber 6 to 15, 1908. William F. Kasting, Buffalo, N. Y.,
is chairman of the show committee.

The Foul Competitor.

A Southern advertiser writes us as follows:

"I take your paper and think it fine. It has saved
me many dollars in buying stock. I wish to thank
you for putting my advertisements in so promptly.
Every time one appears the Review sends it to me and
writes a letter telling me that their paper is the one
to use and runs down your paper, so to speak. I don't
like that much."

[We are glad to have been of service to you, and ap-
preciate your commendatory remarks. The feeling you
entertain regarding the petty tactics adopted by the
journal you name is a natural one, and we believe it is
that of every one of our advertisers similarly solicited.
All good business men have nothing but contempt for
the fellow whose only asset is the decrying of his com-
petitor's goods. And such unworthy methods harm only
those who put them in practice. The "foul competitor,"
detestable as he is to all fair-minded people, is one of
the business evils that must be endured; his case is in-
curable. Ed. F. E.]

PUBLICATIONS RECEIVED.

AMERICAN CARNATION SOCIETY—The proceedings
of the seventeenth annual meeting, held at Wash-
ington, D. C. January 28 to 30, 1908, has been dis-
tributed by Secretary Herr. The report comprises
144 pages, and contains the various papers read,
a full stenographic account of the discussions, carnations
registered in 1907, list of members, etc. The
talk of Professor Norton on Carnation Breeding, also
the essay of C. W. Ward on the same subject, the
latter illustrated with plates showing studies in form
and calyx as well as Mr. Galloway's lecture on ex-
periments with carnations, will be found of absorb-
ing interest. A fine portrait of Ex-President Fred.
Lemon forms a fine ornament. The report is fully
up to the high standard of its predecessors, and re-
flects the greatest credit on the efficient secretary.

Plant Registration by the S. A. F. O. H.

In our issue of May 16, page 678, appears an in-
teresting communication from Secretary W. N. Rudd
of the S. A. F. O. H., setting forth the position of
the society upon the matter of plant registration as
understood by its officers. All right-thinking per-
sons will agree with Mr. Rudd's remarks regarding
the purposes of registration; but this is the first
time that we have seen or heard of registration of
a name being "confused with a certificate of merit."
Such confusion would hardly seem possible were the
subject given any thought at all.

The "sharp criticism" referred to by the secretary,
as far as our knowledge goes, has arisen from the
manner in which the system is conducted rather than
anything else. Speaking for ourselves, we have time
and again pointed out that in our opinion the regis-
tration of a name cannot be dissociated from the
fact that a new plant has been obtained, and our
own criticism has been mainly directed toward the
society publishing over the signature of its official a
description of that new plant, often containing the
statement that the subject registered is superior to
all others of its class, thereby making the society
responsible for the promulgation to the world of
information regarding which it knows absolutely
nothing. This is certainly not an enviable position in
which to be placed.

Mr. Rudd's communication, if it does anything,
clearly points out the weakness of the society in the
carrying out of the registration of plants. In the
first place, that weakness is demonstrated by calling
for objections, if any, to the name registered, show-
ing that the society has no confidence in its endeavor
along this line and that it trusts to the readers of
the trade papers to help it keep its records straight.
As an instance, let us cite the recent desired regis-
tration of the rose Mavourneen. Had the secretary
been possessed of the proper records, it would have
been entirely unnecessary for him to publish the
entry and call for objections thereto. With the
available information at hand he himself could have
at once informed the firm desiring to register the
appellation Mavourneen that the same name had
previously been applied to a rose, without continuing
to the country to point out that fact.

This is a regrettable position, we think; but, under
the circumstances, it evidently cannot be avoided
from the fact that the S. A. F. O. H. is not properly
equipped with records and other data whereby it
can of itself take the positive stand that the name
registered is not a duplicate. The fact that dupli-
cations of names have been corrected by outsiders does
not assist the society one iota in its present position
connected with this matter.

When it comes to the renaming of plants, the
organization is in a more deplorable condition, owing
to the defects enumerated by the secretary, namely,
"the lack of a corps of expert growers and plants-
men and a large collection of growing specimens, as
well as a complete herbarium," etc. We venture to
assert that the society stands forth to the world in
a most anomalous position by attempting to do
something, and that authoritatively, for which it is
not in the least properly equipped.

We have pointed out previously, and reiterate,
that this whole registration plan should be placed
in the hands of the Bureau of Plant Industry at
Washington, D. C., and we have hopes that this will
sooner or later be done. Such a step would relieve
the S. A. F. of attempting to carry out work for
which it is, as we have said, in no position to per-
form satisfactorily, place the plant registration mat-
ters of the country where the trade and the public
can have confidence in the work done, also tend to
remove from the organization the "sharp criticism"
which, under existing conditions, is sure to ensue.
It does not seem to us right that the S. A. F. should
drag along in the matter of plant registration in
the haphazard manner in which it has been doing;
rather should the work be in the hands of some
institution which can give it the necessary and im-
perative attention to render its records authoritative
and put the whole plan on a basis regarding which
there can be no question or dispute.

We observe the comments of our esteemed Boston
contemporary on this subject, wherein it is stated
that the "S. A. F. has been doing business in a
simple, sensible and unpretentious method and not
trying to do impossible things. That method has
served its purpose well and is good enough for the
S. A. F. to stick to for twenty years to come."

This characteristic opinion is not borne out by
the statements of Mr. Rudd himself, who plainly
shows that the society has been trying to do things
impossible of execution by it on account of the de-
fects named by the secretary. It is also a question
as to whether the method has "served its purpose

well"; and there are sure to be, we think, differences
of opinion as to whether such a method, unsatis-
factory as it is, is good enough for a national organi-
zation of the caliber of the S. A. F. to stick to for
two decades more. There are many, like ourselves,
who believe that the S. A. F. should, as we have
stated, relinquish all plant registration matters in
favor of an organization far better equipped to take
care of the work in the manner in which it should
be looked after, than the society can ever hope to be.

Society of American Florists and Ornamental Horticulturists.

Appointment of Vice-President.

President Traendly has appointed John L. Parker
of Birmingham, Ala., as State vice-president for his
State.

Census Committee.

President Traendly has appointed Messrs. Patrick
O'Mara, Jersey City, N. J., J. A. Valentine, Denver,
Colo., and Albert T. Hey, Springfield, Ill., as a com-
mittee to co-operate and advise with the Census
Department regarding matters relating to ornamen-
tal horticulture in the approaching United States
Census.
W. N. RUDD, Secretary.

OUR READERS' VIEWS

The Neglect of Our Native Shrubby.

Editor Florists' Exchange.

Near where I live the banks of the streams are
now aglow with the bloom of the *Kalmia latifolia*,
and yet one never sees it on the lawns. The coral
honeysuckle is clambering and blooming over the
bushes in the woods, but one rarely sees this pretty
climber in the grounds here. Out on the mountains
of Western North Carolina two weeks ago I saw
the flame-colored *Azalea calendulacea* glowing over
the hillsides, but I never saw one planted on a
North Carolina lawn. This neglect of the native
shrubby is worse in the South than elsewhere, for
there are so many wild broad-leaved evergreens that
would make the lawns gay.

Ilex Cassine makes great thickets on the North
Carolina coast, and when it is covered with its great
clusters of red berries it is far more attractive than
the ordinary holly. But we never see it planted.
Ilex glabra is also common there and has black
berries; but it is to the people only a "gallberry" and
they never think of planting it, though Mr. Manning
has made free use of it in the grounds at Pinehurst,
N. C., the famous Winter resort for Bostonians.

At the North Carolina College of Agriculture I
planted about 18 years ago a large clump of the
varieties of *lauro-cerasus* or Portugal laurel. Peo-
ple admire that mass of evergreen foliage, but none
have followed the example. There too I planted the
olea or *Osmanthus fragrans*, now a large bush and
perfuming the atmosphere late in the Fall; also
aucubas that do finely there and the *Photinia japo-
nica* or *sericula*, which is a hardy evergreen far
north of North Carolina. There, too, I planted the
evergreen *eleagnus*, both the bushy forms and the
climbing with golden variegated leaves, and *Osman-
thus aquifolia*, the plant of the olive group with
leaves so like the holly, and that, too, is hardy far
north of that section, but is seldom seen.

In Philadelphia one does see pretty clumps of
the *Azalea amena* and now and then an *Azalea alba*
outdoors, and seldom nowadays the *Azalea mollis*.
But these are often seen in the South, though all
the Chinese azaleas are hardy there when sheltered
from the morning sun. In Eastern North Carolina
one often sees fine old plants of *Camellia japonica*,
but few people seem to be planting them now. Of
course, this is not a native as some others I have
mentioned are not; but what I want to enforce is
that, native or exotic, there is a great wealth of
shrubby that could be used in the South and much
of it in the North that would give us a variety of
bloom instead of depending entirely on the spiræas,
deutzias, forsythias and weigelas.

Then as to the privets. Everyone seems to be
planting the ovalifolium or California privet. I had
in North Carolina the *Ligustrum japonicum latifolium*,
which is there as evergreen as a holly, and I saw
the same plant in the borders of the Botanic
Garden at Washington recently that had not had a
leaf singed during the Winter. I believe that it

would be fully as evergreen as it is there in Philadelphia and perhaps might stand well in New York City. I sent this plant a year or so ago to Mr. Meehan without a name, as I had lost it, and we came to the conclusion that it was Ligustrum lucidum, but seeing the plant at the Botanic Garden in Washington convinced me that it is japonicum.

Then the varieties of the Persian lilac, that make such a display of their long racemes, are far more showy, I think, than the common purple lilac. It would repay any one to visit the shrubby borders at the Botanic Garden at Washington at different times to see the great variety there is in shrubs, blooming at different seasons.

I asked a man recently why people here do not plant the kalmia, which, by the by, they call ivy, as also they do in the Virginia mountains. He said it was thought that it would not grow on the lawns. Probably some have tried to transplant it and neglected the one thing needed by all the broad-leaved evergreens—defoliating. Taken up just before growth begins in Spring, and all the leaves plucked off, it is easy to transplant the wild plants of the kalmia and other broad-leaved evergreens, while it this is not done they are hard to get to live. Magnolia grandiflora, hollies and such I have transplanted in this way with perfect success, moving at times very large hollies from the forest.

Our wild azaleas are seldom seen in the grounds of any of the village or country people, and yet the Azaleas nudiflora and viscosa are easily grown; and the rhododendrons from the mountains will all grow where the soil is not limestone, if the leaves are plucked off as they are lifted from the woods.

Some years ago Mr. W. R. Smith of the Botanic Garden sent me some crossbred seed of crepe myrtle, and the variety of shades I got from these was surprising. Here and there one sees in the South the more recently introduced white crepe myrtle, but generally only the pink and purple. From seed I got plants with white flowers each with a purple base to the petals, pale lilac, pale pink, deep rosy pink, pale purple and very dark purple, and many with heads of bloom immensely larger than those of the old varieties.

There is room here for a great improvement for Southern gardens; the crepe myrtle blooms for so long a time that a variety of shades would make a very attractive clump.

In short, we need a greater variety in our shrubbery both North and South.

W. F. MASSEY.

Clematis Montana.

Editor Florists' Exchange:

Referring to an inquiry on page 671 of The Florists' Exchange, I have a large plant of Clematis montana, which has been in bloom since about April 10 and still has a few sprays with a number of flowers on them. The plant seems to require a year or two to become thoroughly established, although in this particular case a Magnolia grandiflora, which grows in close proximity, may have something to do with its tardy development. My plant has been in its present position three years, and I have noted a similar shyness in a few other cases where I have introduced this plant. It has never been affected by frost in the slightest, and I do not understand why it should not succeed farther north; in fact, H. A. Dreer, Inc., have a cut in one of their catalogues showing a fine example in full bloom which is said to have developed under quite adverse conditions. The same firm also offers a red form of the plant.

That it grows vigorously after becoming established there is not a doubt, and that it is very beautiful is equally true. A few pieces, two to three feet long, sent to my store, kept in good shape several days. It would be useful for florists' work, such as funeral designs or for mantle draping or even to relieve wedding bouquets of their more or less stereotyped appearance.

Washington, D. C.

J. R. FREEMAN.

Memorial Day is Correct Term.

Editor Florists' Exchange:

So many of your writers and advertisers term Memorial Day Decoration Day that it is worth saying again that the Grand Army of the Republic has time and again called attention to the error on the part of those who term it Decoration Day. Quite a few of your advertisers got the name right, Henry M. Robinson & Company of Boston and Pennock-Meehan Company, Philadelphia, among them, I see; while quite close to them in your columns another Boston and another Philadelphia firm have it wrong.

G. A. R.

PRICES IN GERMANY. According to "The Field," a German horticultural paper, efforts are making by the nurserymen, florists, and others interested in horticultural produce to bring about something like uniformity of prices by establishing a tariff that shall be recognized as binding to the dealers. The keenness of competition leads to under-selling and over-production, which has such a disastrous influence on prices and spoils the market. It is not only in Germany nor in horticultural industries that this condition of affairs is brought about by competition. The cure for it hitherto has been the trust or combine; but we rather fancy that what is done for such commodities as beer, bread, etc., might well be practiced in other markets without injury to the consumer. The Germans' aim is to fix a minimum price for every article, and to induce all traders to refuse to sell below that minimum. They also hope to be able to fix a minimum price for services or labor, which is only what is done by the trade unions for numerous classes of workers. Hitherto the gardener has worked in Germany, as in other countries, including England, for low wages—lower than appear

The Late William Scott

to be reasonable. He has also sold his produce in the competitive market with the too often result of obtaining lower prices than would yield anything like a profit; often, too, they meant a loss. It will be interesting to watch this move on the part of the German horticulturists. In this country while garden produce may be returning miserably low prices to the growers, it may at the same time be realizing high prices from the consumers; in which case the dealers have the best of it.—Horticultural Trade Journal, Eng.

The Horticultural Trade Journal, in its issue of May 6, contains an interesting, illustrated account of the Horticultural Traders' Continental tour, in which Richard Vincent, Jr., White Marsh, Md., took part. Mr. Vincent has given our readers, from time to time, a brief narrative of this enjoyable and instructive journey; but he was apparently too modest to state that at a dinner in Ghent J. S. Brunton, one of the party, proposed a toast to Mr. and Mrs. Vincent, to which the former "replied in a racy speech, in which he gave many interesting details of horticulture in America." At another dinner given in Brussels, Mr. Vincent responded to the toast of "The Ladies." In a group photograph, taken at Ghent, we recognize our esteemed friend in the center of the front row of the journeying traders.

William Scott.

Though not unimpaired, the name of William Scott, the genial, wide-souled, master of the florist of Buffalo, N. Y., who passed away on Thursday, May 19, 1908, will come as a severe shock to the whole of the florist trade in the United States and Canada. Mr. Scott had been ailing for two years, having experienced a paralytic stroke which confined him to his room. He recovered sufficiently from this illness to be able to walk around, but last week he had a second stroke and the end came, as stated.

Mr. Scott was born July 31, 1841, at Leigh Park, Hampshire, England, the country home of Sir George Thomas Stanton, one of the finest gardeners in Europe, where his father, a Scotchman, was head gardener 27 years. He attended a private school in the neighboring town of Havant until he was thirteen years of age. His first gardening work was done under his father. When Mr. Scott was seventeen years of age the family moved to Chichester where his father rented the Northgate nurseries. Here William worked until the Spring of 1868, excepting for two years, during which time he was employed in the seed store of W. H. Rogers of Southampton, famous as a most estimable man and as a good grower of rhododendrons.

Possessed of a spirit of adventure, Mr. Scott with his brother Alexander, now of Baltimore, and his friend, E. J. Mepsted, now of Ottawa, Ont., emigrated in 1868 to Canada, all securing work in the nursery of George Leslie. The following Winter Mr. Scott obtained employment with James Pape, who grew plants for the Toronto market. In the Summer of 1869 the young men tried market gardening and the seed business in Stratford, Ont., but the receipts were not sufficient to provide a livelihood for all of them. Through his old friend, the late George Vair, Mr. Scott then took charge of the greenhouses and gardens of George Bailey of Buffalo in 1870. In 1876, through the declining business of his employer, Mr. Scott was almost compelled to rent the houses, quite a little commercial growing having been done the preceding two years. This establishment he rented for three years, and at the end of that time gave it up. About 1879 he purchased an acre of ground in the Cold Springs district of Buffalo on which he erected two greenhouses, and these have been augmented by others to meet the necessities of his trade until a large plant has been built up. A few years ago the firm was incorporated under the name of the William Scott Company, the partners being all members of the family. In addition to the Buffalo plant, a growing establishment at Corfu, N. Y., consisting of two acres, was acquired and operated.

We think it can safely be said that no man was better known in the florist business or more highly esteemed for his many qualities of heart and brain than William Scott. For many years he had been a constant contributor to the trade papers, his articles on a wide range of subjects being at all times intelligent and practical. He was a regular attendant at the conventions of the S. A. P. O. H., and of the American Carnation Society, of which bodies he was a member, and his advice and counsel were often sought in these gatherings on matters of the most vital importance. He was a fluent and ready speaker and had the happy knack of injecting into his remarks flashes of wit and humor, which were greatly appreciated by his hearers. Mr. Scott served most acceptably as president of the Society of American Florists in 1896 at the Cleveland (O.) convention. He was a man widely read, with literary attainments beyond the average in the ranks of the florist business. He had a fund of stories that was inexhaustible, and was the life of every social gathering at which he was present. Perhaps it was as toastmaster on these occasions that he showed to best advantage as a speaker. His writings on horticultural subjects he elaborated and compiled in book form under the title of "The Florists' Manual," a standard work of its kind today.

During the Pan American Exposition Mr. Scott held the position of superintendent of floriculture, and the many beautiful floral designs seen about the exposition grounds were monuments to his skill as a landscape gardener, meriting the commendation of all who viewed them. He was several times president of the local Saint Andrew's Society, also of the Buffalo Florists' Club.

Loyal, both to friend and cause, this gifted, genial man will long be remembered for the excellent services he rendered to the noble profession of which he was a bright ornament.

He is survived by his widow, six sons—Robert, Alexander, William, Jr., Oliver, David and Philip—and one daughter, Helen.

The funeral was held on Thursday at 10 a. m. and was largely attended.

THE FOUNDATION OF SUCCESSFUL VIOLET GROWING

Lecture by Dr. Beverly T. Galloway,
Chief, Bureau of Plant Industry,
Before Horticultural Society of New York, May 13, 1908.

There are four special crops grown in this country, which in the order of their commercial importance are: (1) the rose; (2) the carnation; (3) the violet; and (4) the chrysanthemum. Although I have been gathering statistical data of one kind and another bearing on these crops for the past fifteen years, I am not sure just at present whether I am justified in naming the rose first, or whether it should not give place to the carnation. However, this is a matter aside from my subject, except as a way of introducing the fact that the violet, modest and sweet and without the queenly qualities of her competitors, stands third in actual value of cash returns for money invested.

Some Peculiarities of the Violet Business.

The violet business has some rather interesting and peculiar conditions associated with it. Like the growing of certain crops, the production of poultry, etc., there seems to be an idea prevalent among people who have tried many things and failed that the violet is one crop they can take up without giving any great study to the conditions involved. It is not an unusual thing to find men who have all their lives been engaged in farming, or the trades, or commercial work, getting interested in violet culture, going into the business, and succeeding in an incomprehensible way for the first two or three years. Then, again, I suppose, there are more women scattered through the country who have an idea that they can take up this business than almost any other connected with the growing of crops under glass. As a matter of fact, schoolmarm, clerks, lawyers, doctors, and various others who have, or think they have, opportunities of success, start out with a view to coining money in the production and sale of violets. Doubtless much of this interest in the crop arises from the fact that it does not cost a great deal, comparatively speaking, to start the work. The violet is modest, not only in itself, but in a measure in its requirements, and although it is amenable to a great extent to good treatment, it will sometimes do remarkably well under very indifferent conditions. I have pointed out in the course of my work with this crop, that there are probably more failures in growing it than are to be found with any other plant produced under glass. This, to my mind, is not so much due to inherent difficulties in the crop itself as it is to the fact that so many inexperienced people undertake to grow it.

Looking back over the past fifteen years, it is of interest to me to note that of all the men who were successfully growing the violet ten, twelve, or fifteen years ago, there are very few of them left at the present time. Some of these good people have branched out into other lines, but the greater portion of them have quit the business entirely. There are new growers coming on all the time, however, so that the market is not lacking for a supply of the flowers. Altogether it may be said in this connection that the trade in violets is practically holding its own. There has been no great increase in the demand for the crop, but there has been a wholesome and legitimate growth of the market, largely due to the increasing population in our cities and the demand for a flower, which, when fresh and sweet, is always marketable. There is one peculiarity about the violet that will always make it more or less in demand, and that is, the season for it is circumscribed within certain definite months. The carnation and the rose have long seasons; the chrysanthemum a short one, and the violet somewhat longer but still short when compared to the first two crops. By the middle of April or the first of May the season for the violets is over and then they disappear until the following October, so that there is a freshness and keenness regarding the demand for them each recurring Autumn.

Having now pointed out some of the essentials and fundamentals connected with the business, it is desirable that we shall consider the important factors which have to do with the success or failure of the work when it is conducted on a commercial basis. It is, of course, important that there shall be some kind of a house in which to grow violets. In the earlier days the violet was produced almost exclusively under sashes and in cold frames. As the demand for the flowers increased, however, it was found impracticable, especially in our northern clim-

- (1) Bed construction, showing (a) ordinary wooden raised bench; (b) angle iron construction with terra cotta bottoms; (c) solid beds with 4-inch concrete walls, beds 18 inches deep. Note relative cost of each.
- (2) Solid beds with concrete walls. Beds 18 inches deep, containing 6 inches of soil. Beds of this kind cost less than wooden benches.
- (3) 12-foot violet house, showing raised wooden bench on one side, solid bed on the other with concrete sides. See text for relative cost.
- (4) Solid bed with concrete wall construction, showing method of running heating pipes through center of bed.

ates, to grow the crop in this way. Gradually there was evolved from the cold frame the common dug-out, a modification of the cold frame to the end of sinking a path in the center of the frame so as to give sufficient head room for the worker to handle his plants and gather the flowers without being exposed to the weather. It was considered necessary to keep the plants close to the glass, hence the evolution of the violet was slow. Gradually, however, the sash were raised and the houses were made higher on the sides. Coincident with this development came the change from the growing of the plants out of doors during the Summer to planting under glass and growing them there the season through. I think probably the spot disease had more to do with indoor growing than any other one thing.

The Houses.

There are, of course, all kinds of houses. It is astonishing in this day of greenhouse construction work that there should be establishments devoted to the growing of an important crop, such as some that are in evidence. The violet does not need a great amount of light during the hot months, and even in Winter where the sun is bright it is often essential to have some shade; hence the grower, if he is in the violet business alone, does not need to give so much heed to the question of light as with some other crops. One of the primary items of expense connected with violet culture is the picking of the flowers, hence it is necessary that due attention be given to convenience in getting to the plants, both for the purpose of picking and in order to have access at all times so as to take the necessary steps to prevent the inroads of disease and insects.

A violet house may be any length or any width. Our preference is for houses from 100 to 150 feet in length, 12 feet wide, 7 feet to the ridge and running north and south. This form of construction is comparatively inexpensive and enables the utilization of one walk in the center with beds on either side easily reached from the walk. It is not necessary here to go into a full description of the questions of heating, ventilating, water conveniences, and so on. The violet does not need a great deal of heat, and if the house is so piped as to maintain a temperature of from 40 to 50 degrees when the outside temperature is zero, it is all that is essential. Our preference is for hot water heat for the violet, for the reason that it frequently occurs that only a very little heat is necessary and this can be secured by a comparatively small fire in our boilers.

Cost of Bench Construction.

At this time it may be well to call attention to some recent work we have been carrying on with a view to obtaining information regarding the cost of bench construction. With the prices of lumber constantly increasing, it is becoming an important matter to find substitutes for this material. As a rule we do not advocate the growing of violets on benches. In some cases, however, it is necessary to do this. Even if solid beds are used, wood, or some substitute therefor must be used for the sides. The illustrations show some concrete construction work, also some bench construction of iron and terra cotta, also wooden bench construction. The object of this experimental work is, first, to determine the relative cost of the different kinds of constructive ma-

terial, and second, the difference in growth of crops when produced on solid beds as compared to raised benches. In this particular case the crop is carnations, but the same statements will apply to the violet, and in fact, work along this line has already been done with the violet. As already explained, it is settled in our mind that solid beds are more desirable for violet culture than raised benches. Whether this is true of carnations we are not yet ready to say.

Regarding the cost of construction of the different kinds of beds, we have definite figures at hand. In order to present these figures in an intelligent way the illustration has been prepared showing the cost per square foot of bed space for the three kinds of construction; namely, raised wooden benches, solid beds with walls of concrete, 18 inches high and 4 inches thick, and raised beds with iron frames and tile bottoms. The relative cost, it will be seen, is for the wooden benches 12 1-2 cents per square foot of bed space, 11 cents for the solid beds with concrete walls, and 17 cents per square foot for the iron frame benches with tile bottoms. The cost per plant for the carnation is 9 cents per plant for the wooden benches, 8 cents for the solid beds with concrete walls, and 12 cents for the iron frame benches with tile bottoms. The cost per plant for violets is six cents for the wooden benches, 5 1-2 cents for the solid beds with concrete walls and 8.6 cents for the raised beds with iron frames and tile bottoms. Thus it appears that, taking the first cost of construction, the solid beds with concrete walls are the cheapest. There is no question as to their durability. Wooden benches under ordinary construction will begin to rot out the second year and by the third or fourth year will have to be in large measure replaced.

Soil for Violet Growing.

Almost any good loam soil will be found suitable for the violet. We prefer rather sandy loam to one in which clay predominates. Soils running from 12 to 15 per cent. clay give about the right physical properties. A soil that will grow a good crop of potatoes—250 to 300 bushels per acre—will furnish the basis for a good violet crop, provided there is sufficient organic matter in it. We prefer in all cases to have some of this organic matter in the form of rotted turf, hence it is our practice to secure sod and allow this to rot down. To four parts of well-rotted sod soil we add one part of thoroughly decomposed stable manure. We have no preference in the matter of manure as to whether it is from cows or horses. If it has been well handled, not fire-fanged, thoroughly decayed, we have never been able to see any difference one way or the other. Horse manure, however, is perhaps preferable, as it is more easily handled. We do not add any chemical fertilizers, nor do we advocate them where good decayed manure is available. Florists are prone to err on the side of using too much of this sort of material. Our experimental work, extending over ten or fifteen years on various crops, leads us to believe that as a rule there is more harm done through the application of bone and similar fertilizer than there is real good secured. This may seem a somewhat broad statement, but it may be supported by experimental evidence. Another important consideration in the matter of soil is to have it thoroughly worked over before it goes into the beds, and if practicable to let the frost work through it. To accomplish this we prefer to secure our soil in the Fall, stack it 14 to 18 inches high and let it thoroughly freeze. This freezing destroys many grubs, nematodes, and other pests, which are apt to be destructive the following season unless care is exercised.

As one of the important factors connected with the foundations of successful violet growing, too much stress cannot be laid upon the necessity for a change of soil each year. I feel convinced that many of the failures in growing this crop may be traced directly to the non-recognition of this important matter. The soil looks so good in the Spring and it is such a job to take it out and put in fresh material that the grower is prone to procrastinate and either try it over again for another season or else only remove a portion of it. We have always advocated the use of not less than 6 inches of fresh soil each season, believing it far cheaper to expend a few dollars in the preparation of good soil than it is to cut down the crop of flowers, either through starvation or the cumulative effect of diseases and insects.

Plants for Stock.

The house and soil in readiness, it becomes important to secure first-class stock. Before taking up this question it may be well to briefly mention the

fact, already very well known to most of you, namely, that there are comparatively few varieties of the violet. The Marie Louise is the standard double; the Lady Hume Campbell is second, with strains of each of these which have been locally developed. These cover the category of the double sorts. Of the singles, there are quite a number, but it is not necessary to take up the variety question at this time, as space would forbid. In the securing of stock it is highly important that attention be given to the origin of the same. We do not advocate the use of divided crowns. Plants from stock of this kind are not as a rule as vigorous or as thrifty as cuttings rooted in sand. Sand rooted cuttings, therefore, we consider most desirable for propagation purposes. When one has the work already established and wishes to develop his own stock, cuttings should be made from the middle of February until the latter part of March. It is of fundamental importance to give careful attention to the selection of cuttings. We have shown that the average yield of the violet plant can be materially increased by proper selection. Four years' selection of the plants increased our average yield from about fifty flowers per plant to more than ninety. This selection work was done by marking in the Fall the most vigorous plants, and keeping a record of the blooms from each throughout the season. By the time the propagating season comes around it can be determined which of the plants marked are giv-

kept free from weeds and constantly cultivated. Growth begins at once and is rapid, especially if the plants are under glass and are kept fairly well shaded.

(To be Continued.)

Phormium Tenax.

The following report has been prepared by Consul Robert P. Pooley, of Jamestown, St. Helena, for the information of those who might be interested in the establishment of the phormium (New Zealand flax) industry in the United States.

For a successful start in the phormium industry the services of a New Zealand expert should be secured. Plants should be raised from suckers, planted 6 feet apart, 1,250 to the acre, clear of trees. Plants grown under trees look as good as others, but the fiber is weak. Plenty of sun is necessary. The plants must be fenced against cattle and goats, but sheep do not eat the leaves. Growing from seed is a tedious process, as the young seedlings, being very delicate, require constant care lest they be soon destroyed by grubs.

It is hardly possible to calculate the acreage under phormium in St. Helena. With the exception of about 300 acres planted with suckers in the last two years the plants in the island have existed for the last thirty years. There are probably sufficient mature leaves to supply the government mill, which

Greenhouse Plant of E. J. Byam, Rome, N. Y.

ing the most flowers and the best ones. Cuttings from these plants would propagate the valuable characteristics. By this selective process our increase in yield was brought about as already indicated. The illustration showing a portion of a house of pedigreed plants is interesting from the number of blooms in sight. From this small house of less than 800 plants there was picked at one time more than ten thousand flowers.

In a talk of this kind it is, of course, impracticable to give the many little details which are of the greatest importance in laying the foundation for the successful production of the crop. The manner of putting in the cuttings, the care to be exercised in keeping them from wilting, the prevention of insect attacks, especially red spider—all these things are of the highest importance in getting a foundation stock which will produce the flowers the coming season. It takes considerable time for the violet cutting to root, and for this reason it is more difficult to get good healthy stock than it is even with the rose and carnation. All these matters the grower will have to learn by experience. Our usual practice is to root the cuttings in benches, using bank sand if it is practicable to secure the same. There is a disease of the violet, which we will refer to later and which has its inception usually in the cutting bench, through the medium, I think, of improperly washed sand. Bank sand is usually free from the fungus carrying the disease, hence the recommendation for its use. After the cuttings are rooted they are transferred to small flats, each holding one hundred plants. The flats are about two and a half inches deep and are filled with prepared soil which is well sifted. The plants may stand in these flats until they are ready to be set in the beds, any time between May 20 and June 20. After the plants are put out it is then only necessary to see that they are carefully watered and looked after, the ground

consumes from 90 to 100 tons monthly, for three or four years, the object being to make this available supply last until the suckers put down last year are fit for reaping. Leaves, under favorable conditions, are ready for reaping four years from the planting of the suckers. In three and one-half years there will be sufficient phormium in St. Helena to supply three mills.

A 15-acre drying and bleaching grass field adjoining the mill is necessary. About 35,000 gallons of water, running through the mill, are used daily, as thorough washing, drying, and bleaching are essential to obtain good fiber. [Further details of the St. Helena government mill machinery equipment are contained in the report, which may be consulted at the Bureau of Manufactures.]

E. J. Byam, Rome, N. Y.

It was about seven years ago that E. J. Byam, Rome, N. Y., built his first house, 18x36 feet. The glass has been added to as the demand increased until now he has 25,000 square feet of glass. A general stock is grown for the retail trade, but a large part of the glass is devoted to roses, carnations and violets, with bulbous stock in season. He has two large tubular boilers of 150 horse power placed last year, a fine dwelling house, barn, horses and wagons, and is located in the finest part of the city. Mr. Byam is experiencing a steady increase of trade.

QUIZ.

ROSA POLYANTHA MAMAN LEVAYASSEUR. This new rose has scarcely been put into commerce ere its place in the list of fine varieties is assured. It resembles Mme. Norbert Levayasseur in most of its features, but is a better bloom. Its tint is tender pink, and the blooms appear in great abundance. For groups, edging to rose and other beds, as well as for growing in pots it is a very valuable variety. — Horticultural Trade Journal.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

Albany, N. Y.

EYBES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Boston, Mass.

WAX BROS., 143 Tremont St. Orders for New England States receive our careful attention. We are located in the theatre and shopping district. Telegraph and mail orders solicited. Satisfaction Guaranteed. Established twenty years.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2840 and 4065.

Chicago, Ill.

HAUSWIRTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Dayton, O.

W. G. MATTHEWS, FLORIST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Denver, Colo.

THE PARK FLOREAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Care give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 6297 Plaza.

Retailers desiring a share of out-of-town trade should be represented by a card in this column.

FOR THE RETAILER

[All questions relating to the Retail Trade will be cheerfully answered in this column. We solicit good, sharp photographs of made-up work, decorations, store interiors, etc., for reproduction here.—Ed. F. E.]

Wedding Decorations.

About the usual number of weddings have taken place in New York since Easter, and the principal florists have all had their share of them. The tremendous supply of flowers that has been arriving in this market makes it an easy matter to satisfy customers, at the same time allowing a handsome profit for the florist.

Grace Church has been the scene of many pretty weddings this season, and is possibly the finest church in the city for decorative effects. The following description will give an idea of its treatment for these occasions. The chancel being very lofty, large palms are necessary. Tall stumps, well made up with the large cabbage palm leaves, made a splendid background; in front of these were arranged fine specimen growing palms, placed in triangular formation so as not to interfere with the view of the bridal party. Large plants of margerites, hydrangeas and Azalea mollis were massed here and there, the margerites forming the background, followed with the hydrangeas in colors from white to deep pink, and finishing with the Azalea mollis of every shade and color. Cibotium Schiedel and white and pink spiraeas were arranged so as to immediately face the guests, the entire width of the chancel. This arrangement was kept very low so as not to obstruct the view. Bunches of lilies and white snapdragon were arranged at every other pew, up the center aisle. The pillars of the church were festooned with heavy laurel roping nearly a foot in thickness, giving a rich, massive effect.

The House Decoration.

The entire first floor was decorated for the reception of the invited guests. The stairway leading up from the main hall was covered lightly with wild smilax with large bunches of Mme. Abel Chatenay roses tied with ribbon at the newel post and clusters of the same rose arranged on the balustrade. A large mirror in the hall was done with asparagus and Mme. Abel Chatenay roses. The bride received under a large open fan. This being formed of a large wire frame covered lightly with strings of asparagus, Killarney roses being tied in a large cluster at the handle and allowed to radiate from this point to the outer edge, the general effect was that of a large hand-painted fan, invisibly supported from above, no pedestal being used. A large specimen palm stood on either side of the fan; in front of these were large bushes of Dorothy Perkins rose. There were several bare spaces on the walls; these were filled in with baskets of Killarney roses, the baskets being exact reproductions of the ones used by the peasants in France, which they carry on their backs. The baskets were suspended from the picture molding with pink ribbon, large bows of which mingled with the roses. Garlands of pink roses were hung in front of the mirrors, and on either side of the mantels plants of Dorothy Perkins rose in standard form were stood. The fireplaces were filled in with Queen Alexandra daisies. The doorways were festooned with wild smilax and long sprays of pink snapdragon. Specimen palms were placed in convenient places around the room.

The dining room, which is done in dark oak, was decorated with white flowers, the fireplace being filled in with pot-grown spiraeas. On the mantel were two handsome vases; these were filled with long branches of Wistaria sinensis alba, which were allowed to fall gracefully over the mantel.

The buffet table was decorated with white lilac and Adiantum Farleyense, with white sweet peas on the table arranged in tasteful design. The chandelier immediately above the table was entwined with white wistaria.

The Bridesmaids' Bouquets.

The bridesmaids carried bowl-like baskets filled with a pretty combination of Franz Deegen and Mme. Caroline Testout roses and lily of the valley tied with pale yellow silk ribbon. The bridal bouquet was a creation of white orchids and lily of the valley; broad silk ribbon was used to tie with. The shower effect was not used.

D. RAYBUN.

The Art of Selling.

Read by F. E. Palmer, Brookline, Mass., before Boston Gardeners and Florists' Club, Tuesday evening, May 19, 1908.

The important, in fact the fundamental, element in a successful sale is that it should be of advantage, or profit, to both parties. This simple proposition has, I fear, an unimportant place in the mind of the average salesman; it is nevertheless true and should be made the basis of every transaction between man and man. Any

One of Wolfskill's Flower Store Windows, Los Angeles, Cal.

exchange of services which necessarily involves loss to either party can not be called legitimate business.

A second basic principle in all commerce, and one that should be understood by both buyer and seller, is that demand precedes supply.

In the process of evolution from the simple barter of goods between our forefathers to the complexities of trade in modern civilization, the foregoing two axiomatic truths have become somewhat obscured. Derangements have also crept into the body politic which have aggravated the confusion, and reversed the natural order of things until the man who sells has come to be looked upon as the obsequious servant of him who buys. This attitude has become by custom so much a second nature that we take it for granted the seller is always under obligation to the buyer, and that labor shall forever bow the knee to capital. Volumes have been written, and more doubtless will be, on this important phase of economics before the subject is exhausted, and no more fruitful study could possibly invite the consideration of business men, especially salesmen.

A Friendly Relationship Necessary.

Consistently with the above principles the relationship between buyer and seller should be entirely of a friendly nature, and the appreciation of this fact constitutes the primary lesson in the art of selling.

In some simple kinds of trade little is required of the salesman but to hand over the article called for and take the amount determined upon as payment. In such cases

little special knowledge is required, and certainly no determination of values. When, however, it comes to the selling of flowers, plants, seeds, shrubs and trees, the supplying of decorative schemes—from the simple bunch destined to cheer a sick friend to the elaborate display for ballroom or dinner table—the simple potted plant or the varied collection for the garden, the mysterious seed package, or equally doubtful dormant tree and shrub, then the salesman comes in touch with one of the higher requirements of humanity and the satisfying of these aesthetic needs becomes indeed a fine art. In such cases how many elements can enter into a sale, possibly every one of which may have to be supplied by the intelligent salesman! Most likely the purchaser has a very vague picture in mind as to what he wants, also an equal uncertainty as to the amount to be expended. Imagine a customer in such a frame of mind, also somewhat fastidious of taste and exacting in requirements, and it will readily be seen that a very different problem is presented than in most other commercial transactions.

Some Essential Requirements.

Perhaps the first requirement of a salesman will be that delicate tact which makes his patron feel at ease, and will so gracefully convey information or correct an error—but not the slightest sting of confusion or mortification will be felt. This trait in a salesman, or in fact in any man, is one of the rarest assets.

Next to tact comes enthusiasm, that earnest spirit of service which quickly discovers the customer's needs, cheerfully gives information, evinces a willingness to show every flower in the place if necessary and is never tired out. This quality is as rare as tact and generally goes with it, perhaps being born in a man rather than acquired. Add to these the ability to arrange the flowers artistically so that a very common thing may become one of beauty, to deftly and rapidly pack and tie the box in order that the flowers may not suffer, and that time—which up to this point has been used to advantage—may not be wasted on mere details. It is easy to conceive, as the customer is courteously dismissed, the satisfying effect that all this intelligent effort has upon him. Not only has he been educated and pleased but the value of a simple dozen of roses has been enhanced in his eyes possibly one hundred-fold. In this way a value has been created and credit has redounded both to the house and to the salesman.

Stress has been laid on the philosophical side of the art of selling rather than on its material and technical aspect. This is because of the firm belief that the qualities mentioned, besides conducing to the elevation of the florist's and other kindred businesses, have an immediate and cash value, and that higher ideals will ultimately prevail in trade relations. Indeed the day of the "Deaconing" of the apple barrel, the sanding of sugar, watering of milk, "salting down" of flowers, and general misrepresenting of goods is happily passing away.

The Art in a Nutshell.

Perhaps the following epitome will serve to convey the writer's thoughts in a pointed and more easily remembered form.

It is not such a good practice to "soak" a customer as to satisfy him.

It is better to size him up as to his needs rather than as to his ability to pay a big price.

It is more to the advantage of both parties that good, fresh stock be sold than to entertain the delusion that a customer will come oftener if the goods perish quickly.

Common decency dictates that equal courtesy be extended to every patron regardless of the size of his pocketbook.

Success depends more on absolute reliability than on a glib tongue and a plausible story.

It is taken for granted that a salesman should be well informed on the technical and scientific details of his business, although this knowledge has been lamentably absent in the florist's trade.

Selling a certain line of goods at or below cost as a "leader" to attract the public is not legitimate business, the object being to mislead buyers into the belief that all other goods in the store are equally low priced.

Any other action having as its prime object the ruin of a competitor is pernicious.

The giving away of flowers is no part of selling and should be charged up to advertising.

Finally, to one desirous of perfecting himself in the art of selling, no better lesson can be learned than from a careful study of his own experiences as a buyer. It is safe to say that he will find himself attracted by the cordial, friendly greeting, especially if his name be remembered, the prompt offer of service, and the manifest truthfulness of all information given.

The third International Botanical Congress is to be held at Brussels, Belgium, from May 14 to May 22, 1910.

Our London Letter.

BY A. HUMBLEY.

THE NURSERIES. Although it is only recently that W. H. Page of the Langley Nurseries, Hampton, has become known as one of our best exhibitors of American carnations I find he has been growing them for a considerable time, and was previously a large grower of the English Winter-flowering varieties. After seeing his various exhibits I was anxious to see how they were grown, and on visiting the nurseries I found Mr. Page most willing to give all details of their treatment. And it was quite evident that all practical details were well understood. I found many large houses filled with plants in the most robust health. All were grown in pots. The best crops of bloom were on plants two and three years old, of which there were upward of 50,000 grown in 7 and 8-inch pots; or some might have been in rather larger sizes. I found that though Mr. Page imports all the newer varieties he is not yet willing to give up the old favorites and he ridicules the idea that Mrs. T. W. Lawson is worn out and can be dispensed with; two houses, over 100 by 30 feet, filled with plants of this variety, full of buds and flowers of the best color and quality, fully proved the fact that it cannot yet be dis-

SCHIZANTHUS WISELONENSIS. A very pretty compact growing pink variety of the above is now coming into the market. The plants are barely a foot high and are covered with flowers of a soft rosy pink. It appears to last well, and should become a popular plant. Those seen were grown by Mr. Sweet, who is so well known as one of the best cultivators of flowering plants, and was the first to put verberna Miss Willmott on the market. It is probable that the schizanthus will be grown as extensively as the verberna another season.

AZALEAS AT THE GHEENT QUINQUENNIAL EXPOSITION.

It was natural that at this show, held in the home of the azalea, a magnificent display of this popular plant would be presented. Our English contemporaries reproduce photographs of large banks and beds of azaleas, composed of plants of various sizes, all full of flowers. The Horticultural Trade Journal says: "The pyramidal form of training azaleas is becoming very popular. Not only were there several good groups of well-flowered plants, but in the nurseries that we visited they were strongly in evidence in various sizes. Undoubtedly this system of training will renew interest in azaleas, the sales of which have considerably declined in

Wagon Train of William J. Palmer & Son on a Trip from the Greenhouses at Lancaster, N. Y., to the Buffalo Store—A Distance of Ten Miles

carded. Comparing Aristocrat, though some of the blooms may be of better quality it is not such a good yielder and the habit is far from being as good as that of Lawson. The white sport was equally good, and Mr. Page has also had further sports of the types of Melody, Winsor, Prosperity, and Striped Lawson, or sports corresponding in colors to these varieties. Enchantress has also sported; on one plant noted there was a pure white bloom open, and another of the normal color. Mr. Page remarked that it was only from the three-year-old plants that he had found any sports worth notice. Taking the past few months My Maryland has been the most profitable white variety. Queen Louise is grown, and the center of one house was filled with large plants, some of which were from five to six feet high. A continual succession of blooms has been kept up since last October, and there was a promise of plenty more to follow. White Perfection is another which is grown. As a crimson President Roosevelt is favored, as it keeps up a better succession of bloom than Harlowarden, which, after one crop of flowers is cut there is a long interval before another follows. Enchantress is largely grown and in going through one house I noted some had three good blooms on each stem. I also noted that some of a deeper color were labeled for stock. In a house of Britannia my attention was called to a sport, the flowers of which were a pretty shade of pink; if perpetuated, this will make a useful variety. The above sorts are at present extensively grown, but Winsor, Afterglow and other varieties receive attention and large numbers are propagated.

ROSES.—These are another feature and about 20,000 are grown in large pots, Captain Hayward, Mrs. John Laing, Mrs. Sharman-Crawford, Liberty and Frau Karl Druschki being the varieties most favored.

our own country within recent years. We hope to see a revival, especially with the pyramidal trained plants, as they are more ornamental and useful for decorative purposes. Fan-shaped azaleas are quite a novelty; for certain positions they are decidedly useful. These were exhibited by several firms, some showing finely trained plants about two feet wide at the bottom, and the same in height, with flowers on each side. Others were somewhat one-sided with the flowers predominating on one side only. For windows and certain other positions the fan-shaped plants have many advantages over the usual circular untrained plants which are usually sold. Of course, the trained plants come in more expensive than the ordinary azaleas of commerce, but considering the advantages to be derived from them, nurserymen will do well to give them a trial.

The following awards were received by August Haerens of Somergem, Belgium, at the recent quinquennial exhibition in Ghent: First for the finest group of Azalea indica of all shapes and sizes, put up on 50 square meters, by acclamation of the jury. Over 300 plants were used in the group; first (golden medal) for group of 50 azaleas, fan shape, with felicitation of the jury; first (gilded medal) for 25 Azalea Vervepanna alba; first (gilded medal) for the finest specimen azalea; first (golden medal) for the 12 newest specimen azaleas; second (golden medal) for 100 new azaleas; second (silver medal) for 6 new azaleas.

As to the fan-shaped azaleas, it is strange that they find no more favor in America, while on the Continent everyone likes them at sight. Naturally, they cannot be cheap, as they require too much care and labor, and take up as much house room as do the pyramids. Mr. Haerens intends to go ahead with them and will grow from 300 to 500 every year.

August Bülker & Sons, New York, are American agents for Mr. Haerens.

GRAFTED ROSES

FINE STOCK. READY NOW

Killarney, Carnot, Kaiserin Augusta Victoria, Uncle John, from 2 1/4 in. pots, \$2.00 per dozen; \$15.00 per 100. from 3 in. pots, \$3.00 per dozen; \$18.00 per 100.

Chicago.

News Notes.

Peter Reinberg celebrates on Thursday the twenty-fifth anniversary of his wedding. The arrangements include high mass at St. Gregory's Church, which will be elaborately decorated for the occasion. Mrs. Marshall Field rose is to figure very largely among the flowers used. In the evening a reception at Mr. Reinberg's residence, 3445 North Robey street, is to be given for relatives and friends. Mrs. Reinberg, who was formerly Miss Mary Kronenberger, is well known on the north side for her philanthropy.

E. H. Hunt is meeting a good demand for the Wittbold post molds and clamps for cement benches; an outfit of these accessories is evidently considered a good investment.

New fancy ferns are making their appearance in the market. There are still some rather heavy supplies of the cold storage stock in the city, which will now be hard to move.

Pink double stocks of extra fine quality have been prominent on the counters of the A. L. Randall Company of late, and they have sold especially well.

At the annual meeting of the Municipal Art League held at the Art Institute on Tuesday, Jens Jensen, superintendent of west side parks, delivered an address on "The Use of Sculpture in Gardens."

Work has been commenced on a new store for Schiller the Florist, at 906 West Madison street, opposite the present business location. A greenhouse 150 feet long is to be built in connection with the store.

A new catalogue issued by the Foley Manufacturing Company has just been distributed among the trade. Illustrations of the establishments of many prominent florists throughout the country make the book particularly interesting.

Vaughan's Seed Store is offering a fine lot of bay trees to the trade. Three carloads of the trees arrived at the establishment last week.

J. W. Breakey is now occupying his handsome new store at 3909 Cottage Grove avenue.

J. A. Budlong is cutting some grand carnations just now, Aristocrat being particularly fine.

John Woodward has started a nursery and florist's business at Old Albuquerque, N. M., and is arranging to make a specialty of carnations.

J. H. PEPPER.

The illustrations of the Wittbold watering device, appearing in last week's number in connection with the article on Peter Reinberg's establishment, were inadvertently used in this connection; they belong to an article which will be published later.

Cincinnati.

Trade at a Standstill.

Business is not good and there is plenty of stock. The life and bottom seem to have dropped entirely out. Of course, next week we may sing another tune.

The weather man is dishing us up some pretty hot ones—84 degrees in the shade and this is not calculated to do stock much good.

There is nothing new or exciting to report, except that Julius Baer's delivery auto ran over a four-year-old girl on May 16, killing her; but it was purely an accident and no blame is attached to the driver.

News Notes.

D. Augspurger of D. Augspurger & Sons, Peoria, Ill., was a visitor the past week selling plants to the trade. Martin Reukau, traveling salesman for H. Bayersdorfer & Company, Philadelphia, was also in the city looking after the interests of his firm. He reports a good trade all Spring.

A. Mirring of East St. Louis, Ill., had a busy time of it during the hailstorm Sunday, May 10, and reports his loss 500 feet of glass and lots of damaged plants.

George Ostertag, superintendent of parks, is at present acting park commissioner in the absence of Commissioner Scanlan, who is away on his honeymoon trip. The wedding took place last week Tuesday.

P. Schneider, manager for the Oakland Floral Company at Kirkwood, reports that he has resigned his position and will leave the place July 1. Mr. Schneider will get married, and, after a trip to Europe, will start in business for himself in the southern part of the city. If he has the success with carnations and sweet peas obtained the past season at Oakland, he will find a ready market for his stock, as he reported at the club meeting Thursday that his Enchantress all through the season brought him 5c.; Mrs. T. W. Lawson and Lady Bonifant, 3c.; his sweet peas, 7c. per square foot. From a space of 430 feet he cut 67,000 sweet pea blooms. This consignment was handled by C. A. Kuehn.

Walter Retzer, vice-president of the St. Louis Seed Company, stated at the club meeting that his firm distributed 16,000 packets of seed to as many children on their "free seed day," held recently. The firm has had an extra run of trade, owing to so many seeds being washed out by recent rains.

J. P. Ammann reports that he has bought out the retail establishment of Mrs. Dietchy at Alton, Ill., the price being \$6,000. He will run this store to sell his surplus stock from his Edwardsville place. Mrs. Dietchy will manage the store for him. Mr. Ammann's stock was much sought after and will be missed from this market.

Walter Weber of J. H. Weber and Sons is sending to this market a fine lot of roses of all varieties. The firm has been very busy this Spring handling nursery stock. Frank, who has charge of the business end, says he will take a good delegation from here to the convention of the American Association of Nurserymen, to be held in Milwaukee, June 10 to 12.

Emil Schray, executor of the estate of the late William Schray, has posted notice to those who have interest in the estate that he will make a final settlement in the Probate Court, St. Louis, on the first Monday in June.

Those who have the Memorial Day exercises in charge this year announce a new feature—the throwing of flowers upon the river on the trip to the barracks in honor of the sailors who have been buried at sea. This should create an extra demand for flowers.

The St. Louis Horticultural Society had a booth at the Charity Carnival at Forest Park Summer garden last Saturday. The net proceeds were turned over to the carnival. Donations came from all the local florists and good prices were realized. The booth did a large business.

Florists' Club Meeting.

The May meeting of the Florists' Club was, as expected, poorly attended, as the planting out season is on for good and the majority of the regular attendants were kept busy at home. Members from outside of the city who were present were A. S. Halsted, Belleville; Henry Johan, Collinsville, and J. P. Ammann, Edwardsville. President W. C. Young, Secretary Bentzen and Treasurer Weber were absent. Vice-President Augermuller opened the meeting with fifteen members present. J. J. Bencke acting as secretary. After the regular routine business was disposed of the pottery committee, which was given until the regular May meeting to complete the \$10,000 subscription, failed to report and was discharged with thanks for its efforts in trying to raise this large fund.

The trustees who have the annual picnic in charge reported through Chairman Schoenle that no arrangements had been made as yet. They were given full power to act and make all arrangements as to place, date and full program and to re-

port at the June meeting. The White City amusement garden, near Belleville, was favorably spoken of as the place to hold the outing. On recommendation of A. S. Halsted the trustees will visit and inspect the place next week. The members had a general talk on Easter trade, and all seemed well pleased with the business done. The question box brought the meeting to an interesting close. The remainder of the evening was spent in a nearby cafe where lunch was served.

St. Patrick.

Pittsburg

Trade and News Notes.

Cut flowers were plentiful the past week. Roses were offered at from \$15 per 1000 up, and carnations at about the same price. Too much outdoor stock is a great deal to blame for these conditions. Some very fine white lilac is shipped from the East—the best ever handled in our markets—and brings a fair price. Iris and several sorts of narcissi are also good.

Plant trade is pretty active, although the weather is most unsuitable—entirely too much rain, which prevents any outdoor work. Prices will be lower this season; almost all 4-inch pot plants are offered at \$1 per dozen. Only a little more than a week before Memorial Day, and it will require some hustling to get rid of stock.

One of our department stores, which handled many thousands of h. p. roses, Holland grown, at \$1 per bundle of 10, is now offering them at 50c.—certainly a bargain, which hurts the legitimate trade. Decorative plants, such as palms, rubbers and large ferns, are selling fairly well and are used more than ever before for porch and veranda plants.

Visitors the past week were E. S. Faucourt of the Pennock-Meehan Company, Philadelphia, and S. S. Skidelsky, who spent several days in the city. The latter is much interested in the coming Fall show at Chicago and is working hard to get as many exhibitors as possible. I fear that very few from Pittsburg will make any display, but a few expect to be there.

George Blind of Blind Brothers is the happiest florist in town; his wife presented him a bouncing boy last week—their first child.

William Hamilton, who resigned the superintendency of the North Side parks a few weeks ago, was invited by a few of his florist friends to a dinner this week.

E. C. REINEMAN.

Philadelphia.

Around Town.

"Peace" Day was celebrated in all the schools on Monday, May 18, and all the children and their teachers wore a white carnation. Nearly 200,000 white carnations were required.

W. E. McKissick is making great preparations and laying in some very fine stock in expectation of a busy Memorial Day business. He is showing some new crop dagger ferns and finds an increasing demand for these.

S. S. Pennock left Tuesday for a short trip among the trade and expects to be gone several days.

J. Jensen, 3840 Lancaster avenue has a very attractive display of plants and reports a fair business.

Some very fine white flowered penonies were seen at Pennock-Meehan Company's this week; also fine pink and early red varieties.

Robert Crawford, 233 South Eleventh street, says business has been good with him since Easter. He has a neat store, and last week gave all his lady customers a pocket shopping list, which was greatly appreciated.

P. M. R.

Newport, R. I.

Trade News.

Mr. Meehan, in last week's notes, did well to call the attention of your readers to the usefulness of *Polygonum cuspidatum* for planting in damp places. With us we have found it excellent for planting in shady places; even under pine trees it seems to thrive and do well. It also stands the salt spray and heavy winds of the seashore; in fact it succeeds under such conditions better than any plant that we know of; and being a herbaceous perennial the tops do not have to stand the rigors of the winter.

CARNATIONS and Novelties in DECORATIVE PLANTS
Market and 49th Sts. PHILADELPHIA, PA.

It succeeds best when transplanted late in the Spring.

W. Scott Sisson, formerly with the George A. Weaver Company, has started in the nursery business at his farm in Portsmouth, R. I. He proposes to grow on principally evergreens of the more choice varieties, but intends to give his dahlia plants the same attention as heretofore.

At the Forrest Avenue Nursery Henry Wilson reports the best Spring trade in four years. He caters principally to a clientele that calls for heavy stock, extra well grown, and he spares no expense, either in labor or material, to produce just such stock.

The Mason-Keller wedding on June 3 is to be somewhat of a fashionable affair and will take place at the home of the bride on Hallidon Hill. The floral decorations are to be entirely of white lilac and orchids, the bouquets of the same materials. The decorations are to be arranged by Ziegler. A. McL.

Success with House Plants

BY LIZZIE PAGE HILLHOUSE.

A complete text-book and guide to the care, cultivation and propagation of all plants in the garden and the home.

The volume is written by a woman for women, in plain, concise language, easily understood, and the book has the special merit of giving directions which can be readily followed, the methods prescribed being of the simplest, and the material suggested to be used easily within reach of all.

12mo., 232 pp.; profusely illustrated, with complete and ready reference index to all plants enumerated. Price, Cloth, \$1.00; Paper, 50 cents.

To Retail Florists. The old thought, that it was dangerous for a customer to know much about the care of plants, has passed away, being superseded by the newer and more intelligent one, viz.: that the more successful a customer is with plants, the greater quantity will he or she buy.

We offer Special Inducements to all who wish to handle this book. It is a good seller.

PAUL BRUMMER, Corona, L. I., N. Y.

GERMINATION—Germination is the first act of vitality in plants. Its immediate causes are the presence of moisture, atmospheric air, and a certain elevation of temperature of about 32 degrees, varying, of course, with species. Heat excites the vitality of the embryo, and enables it to take advantage of the agents with which it is in contact. In order that this process may take place, it is necessary that the plant be excluded from direct light. The supply of this, and the other necessities mentioned, must be properly regulated, and in doing so the nature of the soil must be attended to. One of the most important points enabling seed to grow into strong and vigorous plants is draining. Undrained soil is always cold and deficient in the supply of air, preventing a constant renewal of food to the roots. Well-drained soils carry away superabundant moisture, allow a constant supply of fresh fluid and nourishment to penetrate to the roots and consequently contribute to their health and vigor. Putting broken pieces of earthenware into the bottom of the pots to be used, is an example of drainage.

It is the same in the ease of sowing seeds. The ground must be properly prepared for their germination, else the sowing will be unproductive. The ground must be made properly level. Very often seeds are sown too deep, the consequence being that the seeds never grow.

Important internal changes take place in seeds during germination. Starch is converted into dextrine (sugar) by oxidation, and diastase becomes soluble in consequence of the considerable amount of heat which is evolved. During these changes the seed is swollen, the embryo enlarges, ruptures the integument, protrudes, and the growth of a new plant commences.

The seeds of annuals should never be sown until the ground temperature reaches from 45 to 50 degrees. In many plants the cotyledons are gradually raised above the surface of the ground by the growth of the caulicle, after which they become green and act as leaves; but it also sometimes happens that the cotyledons never escape from the seed-coat, but remain buried within it. In that case, the base of the cotyledons is obliged to lengthen as well as, or exclusive of, the caulicle. In dicotyledons (pea, bean, etc.), the bases of the cotyledons extend beyond the seed and skin, then separate and allow the plumule (which lies between them) to rise perpendicularly. In monocotyledons (chry, palm, etc.), on the contrary, the lengthened base of the cotyledons contains concealed within it both radicle and plumule, which eventually burst through the sides. D. M.

THE WEEK'S WORK

Timme's Timely Teachings.

Greenhouse Cut Flower Crops.

The instances when growers find it to be to their interest to prolong the term of productiveness of one or the other variety of Winter-flowering stock to the extent of having the end of one season overlap the beginning of the other, are rare exceptions to what is wisely practiced at properly conducted establishments. If any variety of carnation, rose, sweet pea, snapdragon or mignonette, grown expressly with the object in view and the hope at heart of its yielding a rich harvest in cut blooms from late in the Fall until early Spring, failed to do so, and only now with a belated promise blooms up its reputation of being a profitable thing to grow, the best of pickings yet to be looked for will not suffice to prove it. And again, a variety or kind of cut flower stock that fully came up to expectations the previous Winter is naturally far enough gone by the time Spring work begins to be with-in easy hail of the dump; and there it should go, save such deserving to be carried over for another season, as ferns, smilax, asparagus, callas, some few sorts of roses, etc. In their case, whether to remain where they are, or to be reset in fresh soil, a rest of more or less extended duration or the gradual ripening off of roots or wood is an absolute necessity, but proving of little avail if begun too late or when stock is made to do overtime away into the hot season after a long Winter's incessant activity. Most other kinds, requiring a yearly renewal by young stock, should have been thrown out before this, few of them yielding paying crops of bloom up until the close of May or for Memorial Day demands. Run down remnants of cut flower stock, littering up a bench or part of a bench here and there in places where all kinds of plants in pots, pans and trays are grown for a retail trade and every inch of bench room is of twofold value, are a sight especially distasteful to anyone having faith in orderliness as needful in what-ever pursuit.

The Renewal of Indoor Stock.

Among other reasons which speak for a timely clearing out of cut flower stock and benches is the advisability, or indeed the necessity, of early replanting for the ensuing season. To this end preparations should now be well under way. Many a bench, after being emptied of the old soil, will be found to stand in great need of being thoroughly overhauled and repaired or to be replaced by a new one. All this takes considerable time and before the new soil is all in and the restocking far from being completed, the grower often comes to the conclusion that he isn't the early bird at all that he supposed himself to be when he began. The benching of chrysanthemums as soon as benches are to be had in readiness for the purpose means success with many of the varieties as now grown for the general wholesale market as well as for the exhibition table. The argument against all indoor culture of carnations would possess little force, could growers come soon enough to the rescue of their young stock by planting it into the benches. The same exposure to untold hardships, resulting in the hardening of fibers and stunting of growth, goes on to impair the value of young plants of whatever kind kept for any great length of time in flat trays or small pots awaiting their turn to be planted out in beds or benches. The making of new plantations should therefore not be delayed after this date any longer than can possibly be helped if the young stock is at hand and in proper condition.

The Soil.

There is no question as to the wisdom of making a distinction between the soil good for one species of plants and that bringing best results in the culture of another. Holding this view the less experienced in practical plantmanship are very apt to place too great stress on this particular point, for the time forget-

ting that there are other details of far greater importance which, if rightly attended to, make for best results in the cultivation of indoor crops, as, for instance, perfect health of the young stock to be planted, the proper way of planting it, good aftercare, ventilation, moisture and temperature. Excepting ferns, eucharis, some kinds of hardy bulbs, gardenias, Primulas Forbesii and obconica and a very few varieties of roses and carnations, which all at least do better, if they do not absolutely require a specially prepared kind of soil, differing more or less in character from what the most successful of growers consider good soil for nearly all and everything they plant, no distinction is made in preparing compost for cut flower stock. But that this preparation should take place some time before the soil is used and that it must be done in a thorough-going manner, no good grower denies. Sod, cut to the thickness of not over three inches, piled up and allowed to stand for five or six months, would need no other preparation to be good soil, if used alone. Barn-yard manure, added to it when cut and piled up, in the proportion of one load of fresh manure to two loads of sod, will, after five months of gradually progressing decomposition, change the proportion to one-fourth of partially decayed manure to three-fourths of sod, now at a point of decay, still showing its fibrous texture unimpaired. This compost, to be right for immediate use after five months standing, requires to be turned several times during that period, each time to be piled up again into flat heaps, more and more exposing every particle of the mass to severe freezing during the Winter, but a good shoveling over during March or April, with a few shovelfuls of sharp sand intermixed, suffices to render it good soil for nearly all bench crops, since it is again well worked over by being brought in, in May or June. It is in most cases a better and certainly safer plan to rely upon the application of additional fertilizing matter in the form of mulches or liquid stimulants later on, when they are actually required, than to have the soil over-enriched into which the small plants are to be set out. Nor will newly planted stock require the quantities of water that well-established and fast growing plants do, especially when a crop of bloom is in sight. Good drainage in bench culture does much toward carrying off future trouble caused by excessive moisture.

Dahlias.

Throughout the latter part of last season anyone fortunate enough to have a good field of dahlias to cut from, saw them sold readily at the market and heard the cry for more. Good blooms of whatever type, including single-flowered and pompous, are likely to fare as well this year as last, so say wholesale cut flower men. In plant sales, also, all sorts of dahlias figured prominently last Spring, and the call for them this year so far shows no shrinkage in demand. Rooted cuttings, potted up into 2½ or 3-inch pots are the best stock for retailing and also the best for planting at the grower's own place, if wanted to produce flowers for cutting. Ordinarily well-tilled garden ground not necessarily the very best position will bring better results, more flowers and these of a clearer color and firmer stem, than very rich, deeply worked up soil. Perfect form and pure color, preferably the delicate pink shades, more than the question of type or class, is what sells them. It is time to begin planting out, for to keep the earliest propagated, fast growing young plants in good shape much longer is almost impossible, and the risk of seeing them damaged by late frosts from now on is not greater than any run by delaying the planting while the young stock is in the best of condition. Dahlias want lots of room; three feet in the rows and four feet between rows is none too much. FRED. W. TIMME.

(97) Snapdragon for Winter Flowers. Would you please inform me when to sow snapdragon in order to have flowers in Winter. Are they to be grown out in the field or inside? When will they start to bloom? N. N.
New York.

Sow the seed of snapdragon any time now; as soon as the seedlings are large enough, plant outdoors in well prepared soil. Encourage growth as much as possible all through the Summer. Lift the plants in September and plant them in the greenhouse, keeping them growing without any check, and they will flower the following Winter, commencing probably in late November or early December.

(98) Growing Ilex crenata from Seed. Can Ilex crenata be raised from seed, and if so, which is the best way to do it? Also, how long would it take to have salable plants from seed, provided, of course, this mode of culture can be followed? E. R.
New York.

—This holly should be treated as other hollies are: Save the seed in Autumn, mix it with soil in a box and bury the box level with the top of the ground outdoors. Let it remain there until the following Autumn, then take the seed out of the box and sow it either outdoors or in a greenhouse. The plants should appear in the Spring.

It takes an "age" almost to get salable plants from seeds of the common holly, but as Ilex crenata appears to grow faster, it might not be such a long time to wait. Try cuttings under glass in August or September. J. M.

REVIEW OF THE MARKET

NEW YORK.—The cut flower business shows no improvement over last week; in fact, it is worse, if anything, and there is a very heavy supply of nearly all kinds of stock coming in. The heaviest consignments of lilac seem to be over, and the supply reaching the market daily now is mostly of local-grown stock. While it is more perfect in quality than has been the rule, it is a very difficult problem to get rid of it at satisfactory prices. The green goods dealers are handling a lot of dogwood in large sprays just now, and this is finding great favor as window-dressing material for the retailers. Take the lilac and dogwood together, and it can easily be imagined what a hard matter it is to sell the greenhouse-grown flowers at anything near reasonable prices. Narcissus and tulips from the East are coming in in quantity, but sell very slowly. Orchids are quite plentiful just now, and 25c. each will buy a good grade of Cattleya Mossiae. Lilies and callas are still quite numerous, and prices continue very low; probably never before were so many callas grown for this market as has been the case this year, and it is unfortunate that values on them have been so easy for the last three or four weeks.

Carnations continue very plentiful, and many good flowers are selling at 50c. and 60c. per 100. Roses are hard to move, and while \$4 or \$5 per 100 is the asking price for high-grade stock, little is disposed of at these figures; when clearances are made at all they have to be at speculators' prices, which bring averages down very materially. Sweet peas and snapdragon are plentiful, and prices are lower if anything than they were a week ago. Peonies from the South are coming in regularly, but so far do not seem to take very well. Gardenias are extremely plentiful just now; many of the indoor-grown blooms seem to have been injured in the center from the heat last week, and it has been a difficult matter at times to pick out a few dozen really first-class blooms. In addition to the local-grown crop, quite a few are arriving from the Southwest.

CHICAGO.—The market this week is dull and uninteresting. There is plenty of everything and buying is exceedingly light, making prices anything but firm. Arrivals of peonies are quite light and flowers as a rule show the ravages of late frosts. The problem of the peony supply for Memorial Day is an acute one; if instead of the continuous rainy weather of the month so far the next few days are fine and warm, there will probably be a sufficiency to meet requirements; but if dull weather prevails it is extremely probable that the supply will run very short. Roses are plentiful and cheap, all grades having a downward trend in the price lists. Carnations are much too plentiful, and really fine stock can be obtained at the minimum quotations. Sweet peas continue a good commodity, although outside grown stock is figuring somewhat largely. Lilies are not sought for very much; and lily of the valley is spasmodic in its movement. Violets are no more, with the exception of a few coming from local growers, and these are on their last legs. Lilac is coming in in huge quantities, and its price is hard to establish. It sells at anywhere from 2c. to 15c. a bunch according to quality, but as most transactions are of the bargain clean-up kind this range of prices cannot be taken in a guiding sense. Bulbous stock is passing, and such as is coming in is not disposed of very easily. Cape jasmine is still a glut, and some of the wholesalers have asked their shippers to discontinue sending. Orchids continue scarce and arrivals are insufficient for the demand. Gladioli is arriving freely, and the better sorts appear to move well, the prices for top stock reaching a dollar a dozen. J. H. P.

PHILADELPHIA.—Business has slackened up somewhat after the rather brisk spurt of last week. Prices are more settled at present than for some time. The stock seen at the commission houses is of excellent quality. Roses are bringing fair prices. Carnations are in demand. Sweet peas are everywhere and bring about 25c. to 75c. Cornflower is now coming in. Peonies are bringing from 4c. to 8c. and some very nice stock is shown.

Great preparations are making for Memorial Day trade which, it is expected, will extend in extent that of former years. Already some good orders have been received. P. M. R.

INDIANAPOLIS.—Flower beds, porch boxes, hanging baskets, vases and the many kindred designs from circles to fancy scroll work and U. S. flags now occupy the center of the floral arena. The disinterested or perhaps more dignified retailers are content with receiving batches of funeral work, or speculating on a more remunerative June business, as counter trade and decorating are conspicuous by their absence. A hot spell early last week forced thousands of cut flowers upon the market, for which there was little sale. Many varieties have bloomed too vigorously and are of poor quality. Carnations, particularly, are either very small or suffer from being overfed and heated; 50c. to \$2 per 100 is the price for them. Richmond roses surpass all others in quality at present; \$4 to \$8 per 100 makes them profitable for the store man. Kaiserin Augusta Victoria and La France are also good at \$6 to \$7 per 100. French and Spanish lris, Spiraea Van Houttei, snowballs and peonies are most acceptable for beautifying the flower shops, but are not profitable otherwise. The commission houses are handling thousands of Cape jasmines at \$1 to \$1.25 per 100. Callas, Harrisii and candidum lilies are always in the market at \$10 to \$12.50 per 100.

Tomlinson Hall Market reports a brisk business in the bedding line. Prices are about the same as have obtained in former years. I. B.

BOSTON.—The market this week has shown quite an improvement and business is gradually getting over the stagnant condition that has been prevalent. Next week marks the day that has the largest flower trade of any in the year in this city. This year the prospects are good, and there is no doubt the sales will be larger than on any previous similar occasion. Of the roses now coming in Killarney and Richmond remain leaders. American Beauty are of good quality. Other roses are very plentiful and sell at very low prices. Carnations continue to come in in fine shape although some of the varieties begin to show the effects of the warmer weather. Lilies yet are plentiful; so is lily of the valley. Sweet peas remain rather scarce. Pansies are abundant but are used quite extensively. Gladioli are of fine quality. Marguerites are seen in large numbers, but are fine flowers at this season. Lilacs are now in full swing and are in demand. There is a good call for hardy cut ferns and other evergreens. J. W. D.

NEW BEDFORD, MASS.—The cut flower trade has been very good the past week or so. There has been a brisk demand for carnations; 35c. per dozen retail is the general price. Good roses retail at \$1.50 per dozen. Sweet peas bring \$1 per hundred blooms. Tulips out of doors are in full bloom now, and present a gay aspect. Carnation plants are now being set out in the field by the growers. S. S. Peckham will plant somewhere around 35,000; he houses about 15,000 of these and the remainder he grows for the trade.

Garden work is in full swing now. A good call is noted for tomato plants. Ten-week stocks for Memorial Day will be in fine condition; and from present indications there will be plenty of lilac and other outdoor flowers.

HORTICO.

ST. LOUIS.—There is very little to say regarding the market and the retail trade. The wholesalers seem much discouraged, as business and prices are at a low ebb, and Memorial Day is close at hand. With it comes the closing of the schools, from which quite a lot of business is looked for. Monday morning, May 18, all of our wholesale houses were loaded up with stock. We shall refrain from quoting prices, as consignors would be disappointed at any we would mention.

The plantmen are complaining that there is too much rain, which interferes greatly with their work.

ST. PATRICK.

CINCINNATI, O.—Christopher Wingate, better known as Kit Wingate, a florist, favorably remembered by patrons of the Cincinnati flower markets of some years ago, and also by the old-time rifle marksmen of this vicinity, died suddenly on May 9, in Orange County, Fla., of paralysis, in the 74th year of his age.

THE ELM CITY NURSERY COMPANY, NEW HAVEN, CONN.

THE NEW FORCING HYDRANGEA

Hydrangea Arborescens Grandiflora Alba

THE ELM CITY NURSERY CO.

SELLS at sight. This new plant is to be very popular for forcing especially for Easter. It forces with the greatest ease. Immense heads of purest white. The plants we offer can either be grown on in pots or set out in the field through the summer. Delivery June 15th from 3 inch pots well established.

\$8.00 per 100.

\$75.00 per 1,000.

FIRMS WHO ARE BUILDING.

Items for insertion under this heading are respectfully solicited from our subscribers. They are published free of charge.

MASPEETH, N. Y.—Louis Stessel will build a greenhouse, 18 x 75 feet.

WHITINSVILLE, MASS.—The Pine Grove Conservatories will add another greenhouse, 128 x 29 feet, to its plant.

COFFEYVILLE, KAN.—The Forest Park Floral Company will increase their greenhouse plant to accommodate the requirements of their growing business.

CHANGES IN BUSINESS.

The Florists' Exchange will be pleased to publish under this heading all changes occurring in the addresses of firms connected with the trade as well as notices of concerns or individuals just starting in business. All such items are inserted free of charge.

SAN FRANCISCO, CAL.—The Sievers Floral Company has opened a new store at 1255 Sutter street.

GREEN BAY, WIS.—Charles DeClerc has opened a downtown store at 107 North Adams street.

WEST GROVE, PA.—Daniel H. Green is now sole proprietor of the plant formerly operated under the style of Green & Baylis. There are 12,000 feet of glass and two acres of valuable land. Mr. Baylis, with his sons, has purchased and is now running the establishment of Benjamin Conell here.

KEOKUK, IA.—Articles of incorporation have been filed by the Gate City Seed Company, with \$30,000 capital stock in shares of \$100 each. The officers are A. M. Davidson, president; W. D. Burt, vice-president, and H. E. McCoy, secretary and treasurer; these officers also being the directors. The object of the corporation is to be the buying, selling, raising, etc., of seeds and the company's place of business is to be Keokuk.

ELIZABETH, N. J.—John Walsh, aged seventy-five years, a gardener of this city, died in the Elizabeth General Hospital on May 18, 1908, where he had been for some weeks.

BOWLING.

NEW YORK.—Following are the scores rolled at Thum's bowling alleys May 15:

J. A. Manda	167	172	—
Marshall	124	179	165
Berry	117	97	132
Shreiner	152	137	122
Donaldson	150	135	166
O'Mara	108	107	126
Kessler	112	156	127
Matthews	150	92	130
Shaw	143	115	112
Traendly	108	96	—
Totty	119	—	—

The first two games count on the Traendly prize and also the Marshall prize.

BUFFALO, N. Y.—Undernoted are the scores rolled by the members of the Buffalo Florists' Club this week:

Neubeck	148	157	176
Stephan	178	174	165
Striet	137	134	121
Brucker	119	108	—
Sandiford	178	156	182
Eiss	98	—	—
Boettger	135	187	204
Grever	117	106	176
Sangster	124	112	—
Swell	81	98	—
Mansfield	156	174	175
Lyall	80	90	133
Spiedel	151	145	108

Lockport, N. Y.

Cold and rain have been the weather conditions for the past two weeks. Business has been very slow except for funeral work.

F. G. Lewis has all of his carnations planted out.

Mrs. Oliver has planted out about an acre of asters, which is rather early for this locality.

Geraniums are looking well, but are a little small for this season, as they have been standing still during the late dark weather.

Tomato plants seem to be damping off in large numbers; E. B. Lewis, who grows about 1,500,000, has lost a great many. Asters in flats, both in the frames and in the houses, are also damping off. It makes no difference whether they are kept dry or wet, they go just the same.

LOCKPORT.

Horticultural Society Show.

A very pretty exhibition of orchids, flowering shrubs, etc., was assembled for the annual show of the Horticultural Society of New York, held in the Museum Building of the New York Botanical Garden on May 13 and 14. The newly organized addition to the Horticultural Society (the orchid section) was extremely beneficial in helping toward the exhibition, as several prominent growers brought rare flowers and plants for competitive purposes, and the orchid growers themselves will, no doubt, be the recipients of great benefits by being connected with the Horticultural Society in the matter of proper classification and naming of varieties, as well as bringing their products to the notice of the public at large more prominently through affiliation with that body.

In the class calling for collection of specimens of flowering trees and shrubs, E. R. Pierson Company, Tarrytown, N. Y., carried off the first prize, the second going to W. McCollum, Islip, N. Y. In the winning exhibit were specimens of *Azalea amona*, *Cercis canadensis*, *Tamarix indica*, prunus in variety, *corchorus*, two varieties, *viburnum* in variety, *forsythias*, *andromeda floribunda*, *Rhodotypos kerrioides*, *Elaeagnus longipes*, and the red-flowering dogwood, *Cornus florida rubra*.

F. Weinberg, Woodside, L. I., obtained first prize for collection of succulents, among which were some spineless cacti of his own raising, *Gertrude Padrock*, also of Woodside, L. I., was second in this class. For collection of cut blooms from greenhouse or stove plants, H. A. Siebrecht & Son, New Rochelle, N. Y., were the only exhibitors and were awarded first prize. In their collection were flowers of *Allamanda nobilis*, *Ixora javanica*, *Clerodendron Balfouri*, *anthurium* in variety, *imantophyllums*, *Medinilla major*, *Acaulyma Sanderae*, and a yellow chrysanthemum labeled Spring Beauty.

A. M. Kirby, Jersey City, N. J., won first prize for collection of cut blooms of hardy bulbous plants with tulips and narcissus. For a vase of cut roses containing twenty-five flowers, H. A. Siebrecht & Son were the winners, with blooms of *Mme. Abel Chatenay*. There were no other exhibitors in this class. The Julius Roehrs Company were awarded a certificate for their rose, Newport Fairy.

For collection of orchids, open to amateurs only, the prize was awarded to Clements Moore, Hackensack, N. J., who, by the way, is a commercial grower and would not seem to be eligible for competition in an amateur class. For group of orchid plants in flower containing not fewer than ten species, Julius Roehrs Company, Rutherford, N. J., was first; Lager & Hurrell, Summit, N. J., second; a special being awarded

SPRINGFIELD, O.—The Florists' Club has addressed a communication to the municipal authorities requesting the passage of an ordinance regulating the planting of trees, and the appointment of a tree commissioner. Such action in our opinion will serve to correct many faults in the present haphazard practices in the tree planting, and result in practical benefits to our citizens as well as to aid materially in the ultimate beautification of our city.

The letter was, on motion of John M. Good, referred to the finance committee. It is expected that the council will take action soon and lend its hearty co-operation to this project.

ALTOONA, PA.—Myers Brothers have installed a new refrigerator in their store.

to Joseph A. Manda, Orange, N. J., and a similar award to H. A. Siebrecht & Son.

The gold medal of the society was awarded to J. T. Butterworth, South Framingham, Mass., for a beautiful plant of Cattleya Mossiae, variety Mrs. J. T. Butterworth. The flower of this variety is probably the largest that has ever been found on a cattleya of this species, and the distinguished honor given to the plant by the society met with the general approval of orchid experts who viewed the plant. A silver medal was awarded to Julius Roehrs Company for Brasso-Cattleya Digbyana x Mossiae. Lager & Hurrell received a silver medal for a lycaste, the result of a cross between Lycaste Skinneri and L. Deppii. A bronze medal was awarded to H. A. Siebrecht & Son for a plant of Cattleya Skinneri alba. J. A. Manda was awarded a bronze medal for a plant of Laelia-Cattleya McNabiana. W. A. Manda, South Orange, N. J., received a bronze medal for Cymbidium eburneum Lowianum. Dr. J. M. Kitchen, Orange, N. J., was awarded a special prize for collection of orchid flowers.

These medals are donated by the Horticultural Society to the orchid section by whom they are awarded, this section having complete autonomy, and conducting its own internal affairs.

The Week's News.

Next Wednesday evening, May 27, will be ladies' night of the New York Florists' Club, and the affair will be held in the club rooms, corner of Twenty-third street and Eighth avenue, in the Grand Opera House Building. Chairman W. Rickards of the house committee is making elaborate preparations for both an excellent musical program and for a luncheon to be served. Every member who intends taking ladies to this grand affair should at once notify Mr. Rickards, care of Rickards Brothers, seedsmen, 37 East Nineteenth street,

tailers should want such an exorbitant price as \$5 per dozen. Of course, explanations followed regarding the difference in the length of stems of roses and the great variation in their value.

Our readers will, no doubt, remember that a few weeks ago we mentioned the death of Mr. and Mrs. Bond of Newark, N. J., who died of typhoid fever, supposed to have resulted from eating oysters. Information comes from Trenton, N. J., that the State Bureau of Shell Fisheries, which has been investigating that particular case, has reached the conclusion that there was no foundation for the suspicion that the oysters carried the germ of the disease. The certificate of death furnished by Dr. John F. Haggerty gives the cause of death as cerebro-spinal fever.

On Saturday next comes Memorial Day, and at the present writing it does not seem that there will be such a large supply of cut flowers from hardy shrubs as has been the case in some years. There will probably be some peonies in, though not a great many; and the supply of lilac should be almost over by that time.

George Salford, wholesale florist at 43 West Twenty-ninth street, is handling a novelty in the shape of pink lily of the valley. The color is against it, however, as it does not sell very rapidly. Mr. Salford expects to move in a few days to his new quarters at 43 West Twenty-eighth street.

A. J. Guttman is located at 31 West Twenty-eighth street, and not at 32, as we stated last week.

Frank S. Hicks & Company are about settled in their new quarters at 39 West Twenty-eighth street and are much pleased with their new location.

Some rumors are about regarding a desire being abroad to put the Greek flower peddler out of business. It seems in some quarters he is looked upon as a detriment to the proper retailing of cut flowers. One wholesale dealer remarked this week that the Greek buyer was of equally as much importance as any of the buyers from the larger stores, and if it had not been for the Greek peddler the violet crop could not have been handled during the season just past. Rather than put the Greek peddler out of business, it would be more fitting to honor him in some way or other; in fact, the wholesaler referred to suggested that the Rhinbeck violet growers erect a monument in their town to the Greek violet peddlers of New York City.

Buffalo, N. Y.

News Notes.

William Scott died on Tuesday morning, May 19, 1908, after an illness of two years. Mr. Scott suffered a paralytic stroke last week for the second time. His death will be a great loss to his many friends and to the Buffalo Florists' Club. Always willing to offer the beginner good advice, as well as the advanced, his presence was strongly felt when the time came that a sturdy hand was wanted to guide and to promote the best interests of the trade.

Miss Margaret Reichert of Genesee street has given up the florist business to embark on the sea of matrimony; Norman Pilkey being the lucky man.

Prospects are looking very bright for several orders for June decorations.

Roland Cloudsley is a busy man these days getting his new store in running order; he has the well wishes of all.

At the regular weekly roll of the Florists' Club several members distinguished themselves as bowlers. W. H. G.

Detroit.

Trade Notes.

The local market does not hold any features of special interest. Roses and carnations range in price about as last week. Sweet peas are coming in of better quality and stock finds ready sale.

The demand for boxwood and bay trees is very good. Large beds of pansies in the public parks are stimulating the call for pansy plants; one of these beds contains 1,000 plants of an azure blue color.

A large decoration for a wedding, done in palms and apple blossoms, was the principal feature in large jobs last week.

Carnation plants are going into the field slowly, inclement weather holding up this work. Several florists have started to replant their rose houses.

FRANK DANZER.

The Weathering of Coal.

This subject has been under investigation by the Engineering Experiment Station of the University of Illinois, and a bulletin thereon has recently been issued. The authors after a historical review of the subject state that:

"Judging from the opinions of practical engineers and scientists, the present methods of coal storage without doubt often result in much loss from fires of spontaneous origin and more or less by a deterioration in fuel value of the coal itself. The leading factors entering into the cause of these losses have been pointed out as being (1) the kind of coal as to its volatile combustible content; (2) the presence of occluded inflammable gases in the coal both before and after mining; (3) the presence of pyrites or other sulphur compounds; (4) the size of the coal; (5) the presence of moisture; (6) the temperature; and (7) the accessibility of oxygen to the coal."

Having considered the subject under the above headings, the authors are led to the following results:

"(a) Submerged coal does not lose appreciably in heat value.

"(b) Outdoor exposure results in a loss of heating value varying from 2 to 10 per cent.

"(c) Dry storage has no advantage over storage in the open except with high sulphur coals, where the disintegrating effect of sulphur in the process of oxidation facilitates the escape of hydrocarbons or the oxidation of the same.

"(d) In most cases the losses in storage appear to be practically complete at the end of five months. From the seventh to the ninth month, the loss is inappreciable.

"(e) The results obtained in small samples are to be considered as an index of the changes affecting large masses in kind rather than in degree, but since the losses here shown are not beyond what seems to conform in a general way to the experience of users of coal from large storage heaps, it may not be without value as an indication of weathering effects in actual practice."

BRISTOL, R. I.—Richard H. Dunbar has reported to the police that a number of boys recently smashed about \$40 worth of glass in his greenhouses.

GLEN ST. MARY, FLA.—The Glen St. Mary nurseries are preparing to build a packing house, 70 by 116 feet, this Summer.

ABOUT THE HEAT THAT GETS AWAY

YOU know that the longer the fire travels, constantly coming in contact with the water-ways, the more the heat is harnessed and the less goes up the chimney. So far so good—but of still greater importance is the extracting or absorbing of the greatest amount of heat *directly* in the combustion chamber *when the burning gases are hottest*. This is what is accomplished by the "Burnham" cross-fire channels with their side flue openings, which

channels are surrounded on three sides by extra deep water-ways. The heat that these deep water-ways fail to absorb is then practically all taken up by the fire travel in its journey three times the boiler's length. So these are the reasons why, for greenhouse economy, you can't beat the "Burnham" hot water or steam. Burn hard or soft coal. Send for the new boiler catalog.

Trade and News Notes.

Instead of being cold and wet it has changed to wet and warm, and while it is what is called nice growing weather it certainly does not allow much planting to be done. The bedding out trade still waits, as do the growers for the opportunity of planting out carnations, which operation is scarcely begun, although usually the second week in May sees this job finished.

Owing to a brisk funeral trade the cut flower business has been active these last two weeks, and with Memorial Day only a week or so away we expect business in cut flowers to remain fairly good and anticipate a bustling time the remainder of the month.

Raleigh Wells, greenhouse manager for the Central Nursery Company, was recently married to an estimable lady of a village close by.

James Fraser at Mountain Home has now entirely recovered from a recent illness, which, though short, was severe while it lasted.

H. A. Fisher & Company say their branch store in Battle Creek is proving a very satisfactory investment.

S. B.

Indianapolis.

Current Events.

Baur & Smith are enjoying a heavy shipping business for their bedding stock.

Berterman Brothers Company are laying cement walks and otherwise improving their East Washington street plant.

The Smith & Young Company (Carl Sonnenschildt and Herman Junge) have disposed of their Stratford greenhouses to Ernest Rieman & Company. Mr. Rieman is not a newcomer in the flower business, as he has been associated with his brother, Henry, the South Side florist, for many years and has an enviable reputation as a grower. Smith & Young intend adding more glass to their Cumberland plant and locating their residence there; 25,000 feet of glass figured in the transaction.

The City florist, Houston Tall, has his planting well under way; an unusually good grade of plants is being used by the city this season.

Only the late peonies will be available for Memorial Day, as many are now ready for the market.

Visitors: A. C. Brown, Springfield, Ill.; Wm. Elverson and Mr. Shaw, Pittsfield, Mass. I. B.

TAKE NOTICE

That we are manufacturers of clear Gulf Cypress Greenhouse Material, free from sap and no defects.

We are jobbers in Boilers, Pipe-Fittings, Glass, etc.; in fact, everything necessary for the complete Erection, Heating and Ventilating of Greenhouses. Let us quote you.

TALKS ON GREENHOUSE MATERIAL. No. 3

THE average man when purchasing material for a greenhouse gives but little thought to the cutting of material ready to erect. Each firm that he figures with offers to cut and fit the material ready for him to set it in place, also offers to furnish blue print plans, but the man who is buying doesn't have the faintest idea of what system is going to be used in cutting his material or how it is to be fitted. The cutting of material so that it will set in place properly without any troubles is of great importance. It means something to you to have everything fit while it belongs without any trouble - you can't afford to have your men make this piece a little shorter or that one a little longer when you have paid out good money to have it made right in the first place. Oftentimes many dollars can be saved just on the erecting of the greenhouses if you are sure to get your material from a firm that takes pains to do things right. It costs money to do things right and the cheapest price cannot call for the best goods - a low bid often means the highest when you figure the extra cost for erecting. We have the most perfect system for cutting material and guarantee it to fit perfectly.

If you want to know more about our way of doing things, send for our 96 page catalog. Sent anywhere on request.

THE HOLLY STANDARD ELECTRIC CIRCULATOR

Peters & Son of Hempstead, L. I., say: "Your circulator, new model, installed for us last December gives perfect satisfaction. It heated without half trying, our three large greenhouses. We figure that in one more season it will nearly pay for itself in saving of coal. No fear of frosts now!"

No greenhouse is perfect without it. No greenhouse is out-of-date with it.

Patent Applied For

Why My New Curved Iceless Eave is Far Superior to Anything on the Market Today

- 1st. No sash bars encased in iron, thereby eliminating all danger of bars decaying.
- 2nd. Can be used in conjunction with iron frame construction, thereby doing away with that very objectionable feature, "columns."
- 3rd. Roof bars with drip grooves, which act as conductors to carry away the condensation: **Result**, the driest roof ever used for greenhouse purposes.
- 4th. **THE MOST IMPORTANT OF THEM ALL.** The very small increase in cost over the ordinary style of construction which makes it possible to be used for commercial as well as private purposes.

FOR ATTRACTIVENESS

The U-Bar house with its curved eaves, wide glass spacing and light framing members, makes a greenhouse that is head and shoulders above any other. Their very attractiveness identifies them. Then there is great strength, lightness, durability, productiveness and low cost of maintenance in their favor.

The ideal construction for private estates, parks, public institutions and florists' showrooms.

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION. George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

NEW YORK. Henry Nungesser returned from Europe last week, this having been his 45th voyage.

ST. PAUL, MINN. L. L. May & Company's store is the beehive of the West. Between the nursery and the seed and flower departments there are no idle hours here.

MINNEAPOLIS, MINN. The well-known conservative house of Northrup, King & Company, has a good word regarding the season's trade. Contrary to general opinion the firm thinks the excessive rains have been injurious to the business. A glance at their store shows activity in every department, in spite of storm and discomfort.

ST. LOUIS, MO. The trade here has been uniformly good throughout the season. Schisler-Corneli Seed Company say they have had a satisfactory business. The Tinsley Seed Company are having a good trade, which is rapidly increasing. They think the business has been increased by climatic conditions. A long continued rainy season has caused much seed to rot in the ground, which has to be replaced.

BIRMINGHAM, ALA. The Amzi-Golden Company are now settled in their roomy, new warehouse, made necessary for their largely increased business, which Mr. McVey is handling with skill and industry. Their specialties are cotton seed, cow peas and collards; they also do a large business in fertilizers of their own formula. They tell the same story as is told throughout the South—a good trade and with better profits.

CINCINNATI, O. The two McCullough seed houses are about as lively twins as are to be found in the commercial world. While they are wide-awake and ever ready for business they are not competitors for the detriment of the profit end. The same energy, intelligence and strict business methods, with results following, are to be found in each of these well-known seed houses. Each speaks well of trade conditions, which they think have suffered from the long continued rainy season.

MEMPHIS, TENN. Otto Schwill & Company report an increasing trade along all lines. Their specialty is the trucker, or market gardeners' trade than which none is more critical. They handle the best and have a most satisfactory trade. They also do a general bulk seed trade, which is fast increasing at the South.

The Ellithorne Seed Company, whose specialty is the box-trade, have an increasing business in this line. Mr. Ellithorne is absent from home looking after the trade in general, which those in charge say has been remarkably good.

ALBANY, GA. The Alexander Seed Company since its reorganization two years ago, when a seed house took the place of a drug store, has been doing a healthy trade, which is gradually increasing and indicates a good business future.

The N. L. Willet Seed Company is another seed house that had its birth in a drug store, but is now doing a regular seed trade, in an exclusive seed house. This concern, while conducting a regular seed trade makes a specialty of Southern grown seeds, which are chiefly used in the South. The firm speaks well of trade conditions, and of its box trade in particular.

COLD STORAGE LILIES. LILIAM LONGIFLORUM GIGANTEUM (re-packed). 6 to 8 inch bulbs, 400 in a case, \$8.50 per 100; \$75.00 per 1000; case of 400 for \$30.00. 7 to 9 inch bulbs, 300 in a case, \$9.00 per 100; \$85.00 per 1000; \$25.50 per case of 300. 9 to 10 inch bulbs, 200 in a case, \$14.00 per 100; \$130.00 per 1000; \$26.00 per case of 200. FISCHER'S GRAND PURITY FREESIA. This is the finest Freesia ever offered to the trade and the only one worth growing. The flower buds are of very large size, of glistening whiteness, and of thick heavy substance, making its keeping quality superior to all others. The stems, always stiff, can be grown two feet and over, making this magnificent Freesia one of the finest decorative flowers. It can be used entirely alone in this respect or with other long-stemmed flowers. The greatest care is taken by us to keep this beautiful Freesia pure and free from all danger of mixing, by carefully picking off all seed pods; not allowing one to ripen and drop its seed in the ground, where it would surely grow the next season and work disaster, as it does not come true from seed. So beware of buying stock that has been increased from seed. You will always find Purity here in all its purity. Send in your orders early, for last year the orders far exceeded the supply. This year we hope to fill all orders and offer first and second-grade bulbs for sale. Send for Price List. Delivery in early July. RUDOLPH FISCHER, Santa Anita, Cal.

Stokes Seed Store.

219 Market Street, PHILADELPHIA

FREDONIA, N. Y. A patent has been granted to E. D. Obertriffter of Risley street, Fredonia, for a valuable improvement in the cases used in the seed business to display garden and flower seeds. Mr. Obertriffter will organize a stock company here to manufacture the devices covered by his patent. The chief point in the patent is a box suitable for shipping the seeds, which also contains a set of movable trays, that automatically lift up into tiers when the box is opened. The tiers rising in symmetrical rows form an excellent place to display not only seeds, but medicines, or other goods done up in small packages. Obertriffter is an employee of the Lake Shore Seed Company of Dunkirk.—Buffalo Commercial.

RICHMOND, VA. T. W. Wood & Sons have had one expression regarding Spring trade, which is entire satisfaction, as have all other seed houses that aim to secure the best grades of seed for the market gardeners' trade, as well as the grass and field seeds. The best only will hold the trade at remunerative prices, which is the secret of their increasing trade.

Diggs & Beadle, who among the younger in the trade are striving for a place on top, say business is steadily increasing and that they have been obliged to enlarge their space by removing their offices to an upper floor. They do a strictly retail trade.

T. J. King & Company are doing a unique seed business in this city; unlike any other seed house, their plan is to send boxes of seed to be paid for when seed is sold; it seems to work well, at least they are satisfied, and intend working along the same line in future. Surely if energy well applied merits success, they should be entitled to it.

Seed Trade Notes.

Strange as it may seem the extremely and continuously rainy weather that has prevailed all through the month has not curtailed the usual small cash over-the-counter trade of May to any appreciable extent. To sum up the whole matter of the May trade in a few words, it can be said with much satisfaction that not for many years has an equally good average business been done by the seed trade as a whole.

On the other hand, the extreme scarcity of so many standard seed stocks, as is now so very apparent, must have curtailed what would otherwise have been a record-breaking business. There is, of course, no way to even approximately estimate the volume of business that has been, so to speak, lost by the larger wholesale firms through their not having the needed seeds for their wholesale customers in the quantities desired, but it would seem safe to say, that at least double the amounts of such standard seed stocks as Burpee's bush Lima beans, Country Gentleman sweet corn, white Southport Globe and red Wethersfield onions and practically the entire list of yellow varieties of field corn, could have been disposed of had the seeds been forthcoming. The shortages in seed potatoes, onion sets, and field corn have been very acute; and in field corn especially the extreme shortages are a very serious matter, the effects of which will extend into another year, by keeping field corn seed stocks at a high price. The result of these shortages, especially in seed potatoes and field corn, is already beginning to be reflected in large advance sales of the seeds of mangel-wurzels, carrots, turnips, and such field crops as can be advantageously planted all through June and the first half of July.

Owing to the rainy weather of the past ten days, the demand for the above noted seeds has only just begun to make itself manifest; but now that favorable weather again gives a

chance to finish corn planting, a very urgent call for the seeds mentioned will surely at once become apparent. All seeds for late planting will be found to be of especial value this year.

American Seed Trade Association.

The topics that will be discussed at the convention at Detroit this year at the twenty-sixth annual convention, June 23, 24 and 25, are of interest to all seedsmen. There will be interesting reports from committees in regard to seed legislation, both State and National.

Thousands of people annually pass through Detroit that do not know they have the right to a ten days' stop-over on their tickets without extra charge. This applies to all tickets to or from any point in the United States or Canada, provided same is within the final limit of said ticket. Passengers desiring this privilege will make application for same to conductor or train auditor, and the latter will endorse coupon "Off at Detroit," date and sign same, and advise passengers that immediately upon arrival at Detroit the ticket must be deposited with ticket agent at the depot arrived at. The latter will furnish a receipt for ticket.

There will probably be very low rates offered to the convention of the National Education Association at Cleveland, so if any members wish to attend the latter they can use the above stop-over privileges to good advantage.

The management of the Hotel Pontchartrain promises to make us comfortable and would like to hear in advance from as many as intend to engage rooms. The rates offered are \$2 each for two in a room or \$2.50 and upward, single, without meals. Other hotels are near and eating houses numerous.

C. E. KENDEL, Sec'y.

Subjoined is the program:
"Theoretical and Practical Seed Breeding," by Dr. W. W. Tracy, U. S. Department of Agriculture.

"Farm Practice Investigations in Clover Seed Production," by C. B. Smith, U. S. Department of Agriculture.

"The Use of Forage Plants as Soil Improvers, in the South," by Henry W. Wood, of T. W. Wood & Sons, Richmond, Va. "In the North," by J. E. Northrup, of Northrup, King & Company, Minneapolis, Minn.

"What Effect does a Commercial Depression have on the Garden Seed Business?" by E. C. Dungan, of William Henry Maule, Philadelphia, Pa.

"Practical Education in Horticulture," by Dr. A. C. True, U. S. Department of Agriculture.

"The Effect of Low Prices on the Production of High-Grade Stocks," by C. N. Keeney of N. B. Keeney & Son, Le Roy, N. Y.

"Fire Insurance," by McCullough of J. M. McCullough's Sons Company, Cincinnati, O.

"Disclaimer Discussion," (Executive Session) led by Leonard H. Vaughan of Vaughan's Seed Store, Chicago, and S. F. Willard, of Comstock, Ferris & Company, Wethersfield, Conn.

"The American Trade Mark Law and its Importance to Seed Growers and Merchants," by Edward T. Fenwick of Mason, Fenwick & Lawrence, Washington, D. C.

The officers for 1907-1908 are: President, George S. Green, Chicago; first vice-president, Marshall H. Durvea, New York; second vice-president, F. W. Bolgiano, Washington; secretary-treasurer, C. E. Kendel, Cleveland, O.; assistant secretary, Leonard H. Vaughan, Chicago.

List of Committees: Executive—Henry W. Wood, Richmond, Va.; C. S. Burge, Toledo, O.; Leonard H. Vaughan, Chicago; Charles N. Page, Des Moines, Ia.; Watson S. Woodruff, Orange, Conn.

Membership—Albert McCullough, Cincinnati, O.; S. F. Willard, Wethersfield, Conn.; W. P. Jones, Hartford, Conn.

IMPORTS OF SEEDS, May 19.—J. W. Hampton, Jr. & Company, six cases plants, McHutchison & Company, 22 tubs laurel trees; Julius Rochrs Company, nine cases plants; 40 tubs laurel trees; C. B. Richard & Company, six cases plants; 101 tubs laurel trees; Vaughan's Seed Store, 17 cases plants; F. B. Vandegriff & Company, five packages grass seed; Carrillo & Baldwin, seven cases orchids. May 21.—H. M. Baker, 400 bags clover seed, May 22. H. M. Baker, 216 bags clover seed, Lehn & Pink, 12 packages seed, May 23 and 24. Maltus & Ware, one box five plants.

European Notes.

"The rain, it raineth every day," and yet the supply appears to be inexhaustible. We are fairly sodden in every direction and while trees and weeds appear to revel in it our young seedlings look very sick. London, which has been en fête this week with W. Atlee Burpee, Alex. B. Scott and the great Franco-British exhibition, has been simply deluged, with the exception of the day of the Royal Horticultural show, while from all parts of Northern Europe come reports of disastrous floods and a temperature that recalls a bitterly cold November.

Let me again emphasize the fact that we are on the way to a season of serious shortages in all the useful lines, and that the stock of reliable seed on hand is ridiculously small. Emphasis might also be laid on the lateness of the season and its probable effect upon the harvest, but on this point it is not wise to prophesy, for a few fine hot days would make a marvelous change.

I learn from a well-informed Britisher that Alex. B. Scott of Sharon Hill, Pa., who by the way is a brother-in-law of W. Atlee Burpee and who came over to testify in the famous Dickson lawsuit, brought with him 12 blooms each of roses White Killarney and Mrs. Jardine, which were cut at Sharon Hill on April 2 and arrived on this side in such excellent condition that they formed the table decorations for dinner on two successive days after their arrival.

It is satisfactory to know that the lawsuit in question ended in favor of the justly famous Newtownards company.

Time sits lightly on the genial squire of Fordhook, whose cheery optimism makes a splendid tonic; doubtless it is the result of his persistence in taking in all the good things of life that come in his way. He is in splendid health just now and reports that Mrs. Burpee has derived very great benefit from the trip.

The Noble Horse Chestnut Those who deery the use of the horse chestnut as an ornamental tree, and there are writers who do, should see the grand specimens our lawns display at this season of the year. Trees 50 feet high, broad in proportion, presenting from the ground up large verdant leaves and great panicles of white flowers. No tree on our lawns exceeds the horse chestnut in magnificence; and even after it has flowered it is still one of the most imposing trees in a large collection. It is not every place that suits a horse chestnut. It is of no use to plant it as a street tree. The heat of such a position is against it. It needs being in cool soil, such as that of a lawn usually is, and the air of a lawn is not as hot and dry as that of a street. Green grass covered ground to grow in and a deep soil, and you get the most beautiful of trees.

In this connection may be mentioned the beauty and desirability of the red-flowered horse chestnut, *Aesculus rubicunda*. It is a smaller tree than the common one, *A. hippocastanum*, which our notes have referred to, but a well-formed one, and when in flower it is one of the most admired of trees. *Aesculus rubicunda* was supposed to be a species, the native place of which was uncertain. Some of our older botanics, Wood's for one, make no mention of it as a native tree, while European works mark it "North America." Has any record of it in a wild state been made? Bailey makes it a hybrid between the common horse chestnut and a buckeye, and calls it *Aesculus carnea*.

Mentioning this reminds us to say that the *A. hippocastanum*, universally called European horse chestnut, is, really, a native of Northern Asia, but the name European will stick to it just as English walnut does to the *Juglans regia*, which is not a native of England. The double flowered "European" horse chestnut is a beautiful tree and, as with all double flowers, they are more permanent than single ones. This and all varieties of horse chestnuts are increased by budding or grafting them on the common stock. Seeds of the common one for sowing must be kept in soil from the time they ripen until sown or they quickly spoil.

Varieties of Box Nearly all the varieties of box in cultivation are of the common sempervirens, the others being of Japanese origin. There are of the sempervirens type *rotundifolia*, *deussata*, *myrtifolia*, *Hardwickensis* and a score of others, all well enough in their way and essential in large collections, but after all, what is a better one than the old type itself, *sempervirens*, which usually goes under the name of *arborescens*? Either in its natural form, or as a standard, it is an uncommonly handsome shrub and when given deep soil and enough of moisture at the root the green of its leaves is very cheering. And how it endures city life! All it asks is plenty of moisture and good soil, moisture overhead as well as at the root to keep down red spider, and it will flourish in situations in the city where other evergreens would not live. Box bushes were found suitable for our plantings many years ago, judging by the very fine specimens in many old gardens, and their use is growing in favor and will continue to do so, as their general well doing everywhere becomes more noticed.

Variety of Hibiscus Meehanii The new *Hibiscus syriacus* named Meehanii by the P. J. Berckmans Company is attracting much attention, because of its pretty variegated foliage and its handsome satiny lavender colored flowers. These flowers are single, and when expanded are well set off by the pretty foliage in the background. This variety has been in a few collections for some years, but it is only lately that its value has become more apparent, through the notice given it by the above named firm. The flowers are single, and though of satiny lavender color as a whole, the center is crimson—a good combination.

There is another variegated leaved one in collections called Buist's variegated. It has dark crimson double flowers, but with the singular habit of expanding but half way. No flower opens to its full extent.

The hibiscus family is in much favor with planters, for the reason that it can be planted late in

Spring as it pushes into growth almost the last of all kinds, and then has its period of flowering in late Summer, when almost all other shrubs have done blooming. *Hibiscus althæa* and *Rose of Sharon* are all names under which this shrub goes.

Tree Guards Those who plant trees and fail to place guards around them usually have their work for nothing, referring to street trees or those exposed to the attack of animals or boys. It is really distressing to see young trees in many of our cities, trees set without tree guards; hardly one in a row will be seen in good condition. Either boys will have cut them with knives or hatchets or horses have knawed away the bark.

Because of the great loss of trees in this way florists and others who plant city trees now invariably call attention to the necessity of placing a wire or other kind of guard around them, and offer to furnish them as part of their contract, and they find customers are usually more than willing that guards should be placed around the trees. Such guards can be had of small mesh wire, rust proof, and with a circle of rubber hose or similar material placed at the top to prevent the wire chafing the

specimen, such as seen in photograph reproduced in sturdier growth and for this reason it makes a bush of a harder nature, which we will hope it has.

Hibiscus Syriacus Buist's variegated althæa, or the Buist's Variegated, commonly called, and referred to elsewhere, has long been a favorite with gardeners. There is a beauty of variegation and of growth differing from those of the few other variegated leaved ones known. And then it has the curious habit of never opening fully its dark red double flowers. Some persons say it is prettier with its half opened buds than it would be with them fully expanded, and they may be right, as the half opened flowers, set off by the variegated foliage, are decidedly pretty.

The bush illustrated was photographed just as the flower buds had opened as far as they would, so the general aspect of the bush when at it best can be seen. This althæa was distributed by the late Robert Buist, from his nursery on the Darby Road, Philadelphia, but whether it originated with him is not known.

Not only is this variegated althæa desirable as a

Buist's Variegated Hibiscus Syriacus.

bark of the tree when the latter sways with the wind. If the rubber is not on when the guards are purchased, it is easily adjusted, getting an old greenhouse hose and cutting it to the desired lengths.

Prolonging the Magnolia Display Of the magnolias of the Japanese and Chinese section, from which we get so much enjoyment in early Spring, the *stellata*, *conspicua*, and *Soulangiana* are certainly the best. The *stellata* leads in earliness; next to it are the two others named. Just as all these are over, or are about on the wane, the *Lennei* opens its blooms, and this practically ends the list of the reliable sorts, for *ovata*, or *purpurea*, under which name it is better known, is not reliably hardy.

Lennei is not nearly as well known as it should be. It has large, cup-shaped, rosy red flowers, and these are not all open at once, but appear one after the other for some weeks. This note is written May 29, *Magnolia stellata* has been out of flower for over three weeks, *M. conspicua* for two weeks and *M. Soulangiana* has just disappeared, while *M. Lennei*, though it has perfected the most of its flowers, is still full of blossoms. Nurserymen should get up a better stock of the last named, for all who love magnolias would need it if available.

It is a pity that *M. ovata purpurea* is not hardier. When on an orchard its wood ripens better, and then it is harder than usual, and with age and with hard wood its hardiness increases. The newer one called *Soulangiana nigra*, appears to be much of a *purpurea*, but it has a rather

it is also used to advantage as an edging to beds of shrubs, and even as an ornamental hedge. Owing to its rather liking a close pruning every year it is well fitted for these purposes, soon clothing itself afresh with vigorous shoots full of beautiful variegated leaves.

All althæas are the better for a good pruning every Winter or Spring—Winter if the shoots are wanted for propagation, as the flowers are wholly from the shoots made the same season, so no harm is done no matter how far back the shoots are cut.

Those who have grounds to plant would find credit come to them by planting these variegated althæas, as they stand the sun splendidly, which is what so many variegated shrubs will not do.

The correct name of this shrub is *Hibiscus syriacus*. It has been known as *Althæa frutex*, and its most common name to-day is althæa, although *Rose of Sharon* belongs to it as well.

JOSEPH MEEHAN.

National Flower Show.

New chrysanthemums from the famous hybridists of France have been sent to America to be grown for exhibition at the National Flower Show which will be held at Chicago, November 6 to 15. E. G. Hill of Richmond, Ind., has received consignments of chrysanthemum novelties from Calvat of Greenoble, and Noun of Paris, and more are on the way to him from Rozan-Bouchardat, a famous expert.

ENORMOUS ASPARAGUS Seed of Same
I have a few pounds of this famous seed for sale. Seven stalks have been cutting to a bun in this season of this Asparagus. This seed is all selected from mammoth stalks. If you will plant this seed now you can have thousands of plants for forcing this winter. You can save three quarters of the price of the plants if you will plant the seed.
WARREN SHINN, Woodstock, N. J.

LIKE THE BEE

So is Godfrey Aschmann, the Philadelphia Hustler, Never Idle

Secure Bargains Now for Decoration Day

Come and see for yourself. Look around, then think what wonderful work has been done since Easter. Is it possible? Yes, Aschmann together with his trustworthy family and employees who stand him faithfully by, get it done. They do like the bee that carries the dust from one flower to the other. You, what you have seen, carry the news to your neighbors. Every hole and corner now full, ready for immediate shipment.

From the lands afar, where the choicest are, I gather the plants I supply; Or grow my own, with care unknown, So the best are the ones you buy. Then send in your orders and see your trade grow. None can surpass Aschmann's, wherever you go.

GERANIUMS. S. A. Nutt, John Doyle and mixed colors, 4 in. pots, \$7.00 per 100.

AGERATUM, dwarf blue, best bloomer, 4 in., \$7.00 per 100.

BEGONIA Vernon, finest strain, as dark as blood. Seeds of this beautiful variety picked by myself from specimen plants in Zurich, Switzerland, 4 in. pots, \$8.00 per 100; 3 in., \$5.00 per 100.

BEGONIA, new Improved Erfordi, the true variety. Seeds are gathered by myself in Europe; nothing can beat this beautiful variety, either in brilliancy or in blooming, as it is always in flower Summer and Winter. 4 in. pots, \$7.00 per 100; 3 in., \$5.00 per 100.

SALVIA or Scarlet Sage. I only grow one variety, and that is the true Clara Bedman or Bonfire variety, of medium tall habit. A whole bed planted in mass is a sight to see when in blooming. It looks as if the whole bed is on fire; hardly any leaves are visible. This variety decorates all the gardens in the capitals of England, France, Germany and Switzerland. The seeds of this novelty are collected by myself in Switzerland; therefore, I can supply the pure stock. 4 in., \$7.00 per 100.

HELIOTROPE, 4 in., \$7.00 per 100.

FUCHSIAS, best varieties, 4 in., \$7.00 per 100.

CANNAS, 10 best French sorts, including the dark-leaved varieties, large plants, 4 in., \$8.00 to \$10.00 per 100.

COBEA Scandens, 4 in., Sc.

IVY, Hardy or English, 3 feet high, 4 in., ataked up, 10-12c.

VINCA VARIEGATA, 4 in., \$10.00 per 100; 2 1/2 in., \$5.00 per 100.

COLEUS, Golden Bedder, Verschaffelti, Queen Victoria, 2 1/2 in. pots, \$3.00 per 100. Fancy varieties, \$4.00 per 100.

GERANIUMS, Mme. Sallerot, 2 1/2 in., strong, \$4.00 per 100.

FLOX DRUMMONDI GRANDIFLORA, 2 1/2 to 3 in., \$3.00 per 100.

LOBELIA Compacta and Trailing (Crystal Palace), 2 1/2 in., \$3.00 per 100.

JOTTINGS FOR FLORISTS

BY EDWIN LONSDALE

Aquilegias commonly called columbines, are now in bloom, and are for the most part very beautiful. They are among the most graceful flowering hardy herbaceous plants we have. When in bloom they seem to dance with joy with every passing breeze. Personally I prefer those varieties having flowers with spurs, such as the native Rocky Mountain species, chrysantha and cerulea and the white type of the former.

One of Burbank's so-called achievements was, by repeated selection, the establishment of a strain of columbines which produced flowers without spurs. A lesson as to what may be accomplished by selection, is taught by what Mr. Burbank has done in that direction, thus by taking away grace and beauty from the flower, instead of striving for something which might add to its charms—a decided case of misdirected endeavor!

All the Rocky Mountain columbines and their variations make excellent pot plants, after they have been allowed to grow large enough outdoors to fill at least a 6-inch pot. They may readily be forced into bloom for Easter in the gentle forcing temperature generally maintained in a carnation house, and may just as easily be retarded for Memorial Day if kept in a cold frame or pit and shaded as occasion requires.

Everybody admires pansies, and for a Spring outdoor display they have few equals and no superiors. It may not be generally known that the foundation for the present numerous distinct types and varieties was laid by a woman, no longer ago than 1810. While it is very much more interesting to have a bed of mixed pansies for general purposes, there are times when in large gardens an effort has to be made for distant effects. There are only a very few among the long list that may be used for that purpose, and those are the whites and yellows, and generally, those with dark-colored "eyes" are to be preferred. Emperor William is also much in evidence where a straight color effect is wanted. It is blue with a darker center. There are two distinct varieties being offered by different seedsmen. The older type, which is of a lighter color, is, to my fancy, the more desirable. The other is a deeper purple, and, possibly, may be considered richer in its coloring. It is certainly darker, but not so telling in the distance.

Lord Beaconsfield is a great favorite with many people; the upper petals are of a lavender shade, while the lower ones are of a rich velvety purple. In my mind's eye an effective way to use this distinct type would be to have it occupying the center of at least three lines, and yellows and whites; one variety on either side. Some plants producing fine flowers among the "fancies" are of a straggling habit. Those of a more compact form of growth are to be preferred as producing neater effects.

Large numbers of rose plants are disposed of to eager patrons on or before Memorial Day for cemetery planting. These plants are the most appropriate for that purpose possibly, and at the same time are frequently the least satisfactory, for the reason that, in many localities in the United States the rose slug, a hungry and translucent larva, that is so destructive to the green tissue of the rose leaves, transforms the rose bushes very soon into what is known as *cycasporionensis*! Powdered white hellebore, applied soon enough, either as a dust or as a liquid when it is mixed with water, will quickly kill the slugs. In order to have the most satisfactory results the insecticide must be applied before the damage is done. Too often the seriousness of the trouble is not noticed until it is too late to save the bushes from their unsightly appearance. This is owing to the intervals occurring between the visits of those who are the most directly interested in the welfare of the plants.

What a boon it would be to all concerned if cemetery superintendents everywhere could see their way clear to assume the responsibility of destroying all insect pests affecting roses and other plants growing in cemeteries, thus, really making "God's acre beautiful."

Your contemporary "Horticulture" says under the heading of Philadelphia for May 16, page 639 * * * "The presence of much mildewed stock of Killarney emphasizes our note of last year in propagating only from outdoor grown stock. Plant no Killarney propagated from indoor stock if you would escape mildew." That sounds quite authoritative, and one would naturally think it is all right. It would be interesting to learn some of the details of propagation recommended, whether from hard wood cuttings or from plants that had been growing outdoors for some years, and in due course brought into a greenhouse and the young growths made under those conditions used for propagating purposes—either for grafting or cuttings—to produce "own-root" plants. If grafting be recommended, is the manetti used as the preferred stock? The manetti has been outdoor grown for nobody knows just how long, and that should be sufficient to give the cion sufficient vigor, one would think. Of course, there might be an added advantage by growing the plants that are to furnish the cions outdoors, also.

There are two distinct methods of grafting that may be used in the production of young rose plants. That in general use nowadays to increase the number of plants to be used for the production of flowers in Winter is to use the selected growths from plants that are being forced for cut flowers at the time the grafting process is in operation, and using stocks that have grown outdoors, but have been potted long enough and have been growing in heat a sufficient length of time to have some root action, thus preparing them for the work that is cut out for them. Another method is to use the dormant wood for cions that has been grown outdoors. It is not necessary for me here to go into all the details of grafting roses and roofing rose cuttings; it is up to the writer of the words quoted to give all the data, so that same may be compared with what is in force in some other places where roses are grown. We have some Killarney roses growing here that have done well, but it is only on a small scale. Our plants were bought and delivered on April 27, 1906. They were not planted until September 12. The reason they were planted so late was because the house they were to occupy was not ready before that date. The contract for building same was not awarded until on or about July 27. Under existing conditions the plants gave an excellent account of themselves during the Winter season of 1906-7. In due course we rooted some cuttings from the growth made indoors, and the old plants were carried over and replanted June 27, 1907, and a portion of the old plants were carried over in a solid bed without replanting. Here were Killarney rose plants treated in three different ways all in one rose house, namely: Old plants without replanting, old plants replanted and young plants on own-roots that had been propagated from growth that had been made under glass—and under all the varying conditions no mildew is to be seen, nor the effects of mildew on the old foliage, as may be observed by examination to-day—May 25, 1908.

ALYSSUM Maritimum, fl. pl. The best white-flowering plant for bedding purposes; dwarf, compact and uniform, being propagated by cuttings; fragrant and perpetual flowering. 3 in. pots, \$4.00 per 100.

GLECHOMA VARIEGATA. A most useful plant for baskets, vases, etc.; hardy and desirable for growing in shady places, etc. 3 in. pots, \$4.00 per 100.

One-half inch, 75c.; ¾-inch, \$1.00; 1-inch, \$1.25; special positions extra. Send for Rate Card showing discount of 10c., 15c., 25c., or 35c., per inch on continuous advertising. For rates on Wants, etc., see column for Classified Advertisements.

THE NATIONAL FLOWER SHOW, under the auspices of the S. A. F. O. H., will be held at Chicago, November 6 to 15, 1908. William F. Kasting, Buffalo, N. Y., is chairman of the show committee.

Wood Preservation for Horticulturists.

During the coming year the Government will extend its experiments in wood preservation to cover an entirely new field—the work of treating greenhouse timbers.

Decay takes place very rapidly under the conditions of high humidity always found in greenhouses and horticultural buildings. The timber at present employed in the construction of such buildings consists for the most part of the naturally durable and relatively expensive kinds, such as select cypress and white pine. By a preservation treatment other cheaper and less durable species can probably be successfully substituted for them, and this can be done at a low cost.

In the treatment of greenhouse timbers several problems must be solved. For instance, it is desirable that the wood used in greenhouse construction be painted white in order that it will reflect as much light as possible. Consequently, a preservative must be used which will allow the treated timbers to hold a coat of white paint. Again, no preservative can be used which will in any degree affect the growing plants. It is probable, however, that these difficulties can be overcome, and the completion of the investigation will be watched with interest.

The investigations in wood preservation by the use of creosote, which is nothing more than the dead oil of coal tar and of zinc chlorid, is considered of such importance by the Government that one branch of a bureau in the United States Department of Agriculture—the "Office of Wood Preservation" in the Forest Service—is given over entirely to the work of experiments in co-operation with railroad companies, mining corporations and individuals who desire to prolong the life of the timber which they use. Advice and practical assistance are furnished all who request it of the Forester at Washington.

THE AMERICAN PEONY SOCIETY.—The sixth annual meeting of the American Peony Society will be held on June 18 and 19, 1908, at the State College of Agriculture, Cornell University, Ithaca, N. Y.

A. H. FEWKES, Secretary.

Our London Letter.

BY A. HEMSLEY.

THE ROYAL HORTICULTURAL SOCIETY.—At the last meeting some of the large growers did not come out quite so strong as usual; probably this was owing to the fact that just now is a busy time at home, and a fortnight later the great Spring show at the Inner Temple Gardens follows. From all I hear this will be a bigger affair than ever.

I must still repeat that we are short of choice novelties this season. The most useful plant before the floral committee at the last meeting was *Asparagus filicinus*. This came from the gardens of Sir Trevor Lawrence, Bart. It is an Himalayan species introduced by C. Sprenger, and in some respects resembles *Asparagus Sprengeri*, but the branches are produced horizontally from an upright stem, and have a flat spreading fern-like appearance, and the small bell-like flowers hang down. The leaves much resemble those of *A. Sprengeri*. It may be quite hardy, but succeeds best in a cool greenhouse.

RAMBLER ROSES were a great feature. The White Dorothy Perkins is certainly one of the best white Ramblers we have. Messrs. Rochford & Sons exhibited a new double sport from Cant's Blush; it was named Gertrude Rochford, and should prove a valuable addition to this class of roses. Tausend-schön is another which has been well shown by several growers; and I must once more say that *Hawatha* is one of the greatest favorites we have. I have noted some splendid specimens in the market. The new hybrid tea Joseph Lowe has been well shown and it is certainly a fine rose, but I am doubtful if the color is quite what will suit most florists. Yet if some one would give it a start it might come to the front.

IN CARNATIONS I find Marmion is one that is in great demand both by private and trade growers. Blooms of this variety and the pink Malmaison make the highest prices of any carnations on the market; but if *Enchantress* was not so overabundant it would realize better prices for choice work. Florists now go in for Winsor or *Fiancée* as they are seen at every small store.

IVY-LEAVED PELARGONIUMS are being extensively used again this season. As a pot plant we have nothing to equal Galilee; I have noted plants from different growers which make from 15 to 18 shillings per dozen, grown in 5-inch pots, about 15 to 18 inches high, with about a dozen good trusses of bloom on each and plenty of buds to follow. H. Ward sends me blooms of a sport which are of a pretty shade of lavender or mauve; he tells me that he has a stock of about five dozen plants all of which are true to color and equally free as the parent Galilee. From another grower I noted plants which were called the Improved Galilee, the flowers being larger and of a rather more pleasing shade of pink. The old favorite *Madame Crousse* is most extensively grown and holds its own against all new comers. The ivy-leaved and the zonal have, to a great extent, taken the place of the show or decorative varieties.

CLUB AND SOCIETY DOINGS

AMERICAN ASSOCIATION OF NURSERYMEN.—At the annual meeting to be held at Milwaukee, Wis., June 10, 11, and 12, 1908, the following papers will be read and discussed:

How can the Nurseryman best Assist in the Civic Improvement Movement, by J. Horace McFarland, Harrisburg, Pa.

Is it Good Policy on the part of the Nurserymen to send out Cheap Lists at the end of the Season? by J. M. Pitkin, Newark, N. Y.

A few Points on Improvements, by Judge Eugene Stark, Louisiana, Mo.

Semi-Tropical Thoughts for Nurserymen, by H. H. Hume, Glen St. Mary, Fla.

The Great Southwest, by John S. Kerr, Sherman, Tex.

Cost of Growing Stock, by H. L. Bird, Benton Harbor, Mich.

The Pecan, by H. D. Simpson, Vincennes, Ind.

Elements of Success in the Nursery Business, by J. B. Pilkington, Portland, Ore.

List of Desirable Fruits for my State and are Recommended to the Planter, by C. M. Hobbs, Bridgeport, Ind.; J. Van Lindley, Pomona, N. C.; Geo. H. Whiting, Yankton, S. D.; C. J. Maloy, Rochester, N. Y.; A. Willis, Ottawa, Kan.; E. W. Chaffin, Winchester, Tenn.; W. E. Hoikes, Huntsville, Ala.; Peter Youngers, Geneva, Neb.; F. A. Weber, Nursery, Mo.

In addition there is a long list of questions on subjects of great importance to nurserymen.

The committee arranging for the comfort of the members of the American Association of Nurserymen has arranged for accommodations at the Great Northern Hotel, corner Jackson boulevard and Dearborn street, to use that hotel as headquarters for those who may wish to stop off in Chicago en route to Milwaukee. The management would like to receive word from all those who may desire accommodations for overnight.

CARL CROPP, }
BENJ. E. GAGE, } Committee.

MORRIS COUNTY GARDENERS AND FLORISTS' SOCIETY.—The May meeting of this society was devoted to flowering shrubs, and three large groups of the flowers arranged for effect were staged by William Duckham, Arthur Herrington and E. Reagan. The F. & F. nurseries had hardy azaleas in pots, brought by Mr. Ottolander. John Downing, gardener to Dr. McAlpin of Brooklawn Farms, had *Begonia Lorraine*, which had been in continuous bloom five months, to show its possibilities. Arthur Herrington read a paper on "Hardy Shrubs," an able effort, fully appreciated.

At the next meeting Frank Eskesen will read a paper on "Fern Decoration," which will be illustrated by examples from himself and other members. There will also be a display of hardy herbaceous flowers. The schedule for the next flower show (October 29 and 30) is nearly ready. E. R.

OUR READERS' VIEWS

Memorial Day.

Editor Florists' Exchange:

I am glad to notice G. A. R.'s remarks on the improper use of Decoration Day for Memorial Day, which appeared in your last week's issue. Your correspondents in the various cities use the correct name, I see; but many advertisers do not. Decoration Day may mean much the same as Memorial Day; so would Stars and Stripes Day for Flag Day, but Memorial Day is the name, and the right one is what we all want.

G. A. R. No. 2.

A Monument to William Scott.

Editor Florists' Exchange:

As I gazed at the grave of the late William Scott, reflecting upon the various phases of human life, its aspirations, hopes, vanities and the end of it all—death and oblivion—an idea flashed through my mind, which I wish to submit to your kind consideration. Is it not eminently proper that William Scott's numerous friends and admirers everywhere should pay him the last tribute of respect by contributing their mites toward the erection of a monument to his memory?

Mr. Scott was ever ready to lend a helping hand to his brother florists, and by his brilliant pen and his wise utterances did much for the advancement of horticulture, a man who often sacrificed his time and his own interests for the sake of the general benefit to the trade. Surely William Scott deserves some recognition and gratitude at our hands!

The contributions need not necessarily be large, nor the monument elaborate.

A simple stone bearing the words, "To William Scott, from his brother florists of the American Continent," would quite suffice.

Why not do honor to him who so well deserves it? Let us all subscribe our dimes toward the Scott monument fund!

S.

Editor Florists' Exchange:

I was so sorry to read in your issue of May 23 of the death of William Scott of Buffalo. I had known him slightly for some years past in the capacity of judge at flower shows, and I am sure his loss will be felt on both sides of the border. I sympathize with his family.

GEORGE McNAUGHTON.

May-Flowering Tulips.

Editor Florists' Exchange:

I have read Mr. Lonsdale's remarks in reply to my advice to plant the May-flowering tulips. I was certainly under the impression when I read his former remarks in "Jottings" that the Dutch growers were selling inferior bulbs for A No. 1 stock, and so killing "the goose that lays the golden eggs." However, that is their business.

Such places as Girard College and the public parks ought to plant all the tulip varieties, and so educate the public.

Reflections on Current Topics.

Mr. Editor. I feel very much elated at the honor that has come to me in my declining days; for I notice that my alleged meanderings on this subliminary sphere are of its much interest and concern to trade paper correspondents as are the movements of such notables as the drummers and others of that ilk, who find it necessary to journey from home in a business way.

In a periodical noted for the veracity (?) of its representatives, I observe "Phil" of Philadelphia furnishes the following funny foundationless phantasm: "The street asserts that His Grace of York and Job were seen walking arm in arm on Chestnut street." That would indeed have been a high honor—for His Grace—but, I fear, "Phil" was in his usual somnambulistic condition, and is again the victim of a nightmare. The "street," both in Philadelphia and New York, it appears, has to stand sponsor for many of the ravings of that trade paper's reporters, who "see visions and dream dreams."

* * *

Speaking of "His Grace of York," by whom I presume is meant my old friend Edwin Lonsdale, I was greatly delighted to see his signature appearing at the end of a batch of interesting notes, from the Quaker City, in a recent issue of your paper. Now his writings are where they belong—in the leading horticultural trade journal of America. He will there have an appreciative and alert audience, men and women who welcome having placed before them, information beyond the recital of a too previous visitation of the stork, and other old woman gossip of that kind; and who want to read material that will assist them in the conduct of their business. And I venture to say, no man in America is better qualified to provide a horticultural literary feast than friend Lonsdale. The fact that Job has at times crossed swords with him (and may continue to do so) is nothing either to his or Job's discredit. Lonsdale is a foeman worthy of any man's steel; a careful writer, and he is a good opponent who can get the best of him. I congratulate "His Grace" on the wisdom of his selection of a medium in which to present his informative contributions to the horticultural-reading public; and also The Florists' Exchange in being that medium. Long may he wield his facile and instructive pen for your readers' benefit.

* * *

Here comes another old-time friend, Uncle John Thorpe, this time in the rôle of a Job's comforter. It is, indeed, a pleasure to get a cheering and encouraging word once in a while, in an Ismaelitic existence such as mine. *Nil desperandum* is an excellent motto; it has been mine ever since I began the undertaking of keeping the horticultural world straight, and I "never despair" of ultimately accomplishing my object. I can see great progress, even now.

Uncle John says that carnation Van Leeuwen, "whether father or mother, as presented, never ought to appear in the legitimate parentage" of Mrs. Thomas W. Lawson. Then why does it appear as such (and gone so long without contradiction) in that most excellent authoritative book, "The American Carnation," by Charles Willis Ward? I presume there are few men in America better posted on the history of carnations in this country than Mr. Ward; and it seems incredible that he would have so definitely given Van Leeuwen and Daybreak as the parents of Lawson—the former variety the pollen parent, the latter the seed bearer, were the statement not in accordance with the facts! I observe the originator of Van Leeuwen comes to the defence of his introduction in your columns; and I believe others than the raiser of that fine carnation and Dr. Lamborn, already cited by me, will be found who are willing to admit that Tidal Wave and Van Leeuwen are not synonymous sorts. The bulk of the real evidence yet submitted is, I argue, all in favor of Van Leeuwen. It is interesting to note, however, that Uncle John was the raiser of the progenitors of Silver Spray and Tidal Wave, from which strain the Lawson has sprung.

* * *

I see by an item quoted by you from an English horticultural journal that the present day Scotch gardeners are not deteriorating save in their "literary standing." This must be because the best "literateurs" have left their beloved country—a land regarding which Dr. Johnson said the Scotsman was never happier than when his back was turned toward it, or words to that effect—and have emigrated to the United States. Here they undoubtedly turn out articles "clear, terse, illuminating and original," that would rank with the best, either modern or ancient; as witness the unapproachable efforts of Birnie, Cameron, Duncan, the Ginger Jar man, "Traveler" and "others too numerous to mention." Scotland's great loss in this respect has surely been America's gain—or otherwise.

In common with the thousands of readers of the

trade papers throughout the country I was grieved to learn of the passing away of the amiable, talented, big-hearted William Scott of Buffalo. There was not a man of my acquaintance whose friendship I valued and whose ability I admired more than those of William Scott. Gifted far beyond the man ordinarily found among the craft, either as employer or employee, his writings on multitudinous subjects were always perused by me with pleasure and profit, while to know the man personally was to love him as a dear friend. No one familiar with Mr. Scott's career as a contributor to the trade press but greatly admired his extreme loyalty to the periodical to which he latterly transferred his allegiance, and to which in its early struggles he proved such a valuable aid; yet, strange as it seems, one searches in vain in the eulogies of his ability and the other minutie of his life work given in that particular journal, for one word of appreciation or one expression of gratitude for the services he rendered it when these services stood it in great, good stead. Alas for the estimate that some place on loyal, true friendship!

Speaking of Mr. Scott's writings for the trade press, I am glad to see it pointed out by one of your contemporaries that these writings "have been freely plagiarized." William Scott was an originator, those who have followed him along certain lines as instructors of the craft are but imitators, whose dry-as-dust, second-hand effusions lack the sparkle and glow that characterized the masterpieces of which they are but poor copies. The genius of the dead man—his thorough familiarity with every cultural and other detail on which he imparted information shone forth in every line he penned. No wonder then, as your contemporary says, "it is always easy to distinguish between the original and the imitation." Verily, this is an instance where imitation ceases to be flattery. Unlike some of our present-day instructors, too, William Scott knew his limitations; and was never backward to confess his inability to handle a subject, regarding which he had not the necessary knowledge to speak authoritatively. This fact is shown in his "Manual," particularly in the chapter dealing with orchids. He relied mostly on his own experience, rather than on the encyclopedias; and that originality is what made his writings of such great value.

American horticulture will long mourn the demise of her gifted son and able exponent. "Green be the grass above thee."

* * *

The story of the late Jacob Moore, as related recently in your columns, was indeed a sad one. To die in poverty after expending a fortune and working a life-time on horticultural experiments which were the means of giving several improved and profitable varieties of grapes to the world, is a fate sorrowful to contemplate, and makes one wonder why such things could really be. But the reward of the benefactor of the human race through any line of horticultural endeavor seems to be a mighty poor one, at best. Not long ago I read of the closing days of the career of John Claudius Loudon, the talented Scot, who in his generation was one of the most prolific writers on horticultural and landscape gardening subjects, and who probably did more to promote and advance the profession in the British Islands than any other man before or since. I was surprised to learn that Loudon died practically in poverty, leaving nothing to his widow and daughter save his good name, and an interest in his numerous works. After his death Mrs. Loudon began to write those useful volumes with which her name is associated, as a means of livelihood.

Not along the path of a creator of new plants nor of an author of horticultural books, therefore, does the "royal road to fortune" seem to lie. There appears to be, on the one hand, more money in the introducing into commerce of other people's novelties; and, on the other, in purloining material from the published works of others and supplying it to gardening publications at so much a column. Another of life's paradoxes; at least, so it seems to me.

JOB.

W. Atlee Burpee Abroad.

A letter received from Mr. W. Atlee Burpee, dated at Guernsey (Channel Islands), May 16, gives expression to the pleasure he is deriving from his visit to that beautiful island, as also that of Mrs. Burpee and Mr. and Mrs. Hugh Dickson, of Belfast, all of whom have fallen strongly in love with the place. Mr. Burpee says: "Never before have we had pleasanter drives or more charming or better-kept country hotels; never before have I realized to what extent fruits and vegetables were forced for market. To-day we have had delicious fresh figs (almost an orchard under one glass roof), cantaloupes, peaches, strawberries, green peas (best I have ever had in England or America), new potatoes and asparagus."

The Carnation Situation.

Editor Florists' Exchange:

I will again quote Mr. Lonsdale's text from your issue of May 9: "The surplus of carnation flowers is bothering the growers thereof quite a good deal." The "grower" and the "surplus" is plainly the subject under discussion; but in last week's issue of your paper he serenely switches off—in fact, he is a little evasive—leaving the grower and the surplus altogether out of the question and tells us how two firms, one in Philadelphia and another in Pittsburg, both presumably retailers, "dispose of large quantities of flowers," which, of course, they have bought after receiving the orders, and does not enter into the question of surplus at all. Seeing the retailer buys as he goes, the real surplus is something that confronts the grower only. That stroke of business done by the Pittsburg firm may look prodigious to the provincial florist, but it would look rather insignificant in any large center where the surplus is in evidence. Those 800 boxes, presumably sold at Christmas, would each contain, say, 8 roses, or if carnations were used, probably 12 flowers in each box. Of course, this would help, but it would not wipe out the surplus as I saw it in New York this Winter. That St. Valentine's Day sale of 1,200 boxes, each containing probably 50 violets, sent by the boys to the girls or vice versa, seeing it is leap year, is, I allow, "going some" if only for one day in the year, and would certainly, if triplicated, make quite a noticeable hole in the 250,000 violets which is, I believe, the daily average coming into the New York commission district during the height of the crop. Unfortunately, St. Valentine's Day comes only once a year; the violets come every day.

But, like Mr. Lonsdale, I am getting away from the point. Mr. Kift, that Pittsburg firm, or any retailer has a perfect right to advertise their stock at retail prices in the daily papers; it shows energy and enterprise on their part, but I submit that if either the wholesale grower or the wholesale commission dealer were to do the same he would be doing wrong. He would be antagonizing and working against the retailer whose legitimate right it is to disseminate our stock to the masses. The retailer could hardly be expected to buy what the grower or wholesaler had left after supplying the very people who ought to have been his customers.

Just a word about "Decoration Day." I think the term is all right. It is the day we decorate the monuments and graves of those who have "gone before." Their memory we have always with us; we "decorate" once a year. JOHN BIRNIE.

An Editor's Views on "Taffy."

One thing I did learn way down to the core—the folly of that sort of journalism which is based upon handling out taffy. People would come and ask us to give them "a few kind words," and we would forthwith proceed to mention "the beautiful and accomplished Miss Smith" or "our honored and highly respected townsman." I found that the more you handed it out the less they thought of you and the more they expected. When your supply of adjectives ran out, you were a back number. No! No! This "taffy" and all those bouquets of "kind words" simply soften the soul. I would not praise a man unless he did something so worthy that he compelled praise.—H. W. Collingwood, editor of Rural New Yorker.

AMONG THE GROWERS

Andrew McAdams, Chicago.

One of the best known and oldest established retail florists in Chicago is Andrew McAdams, who is located at 316 Fifty-third street, where he has a well-appointed store, and seven large greenhouses in which he grows along palms, ferns, rubbers, crotons and other foliage plants and a widely assorted line of bedding stock. Among the "little of everything," as he describes his line, was seen at the time of my visit some splendidly flowered Cattleya Mossiae, many of the flower stems bearing four or more blooms. He has quite a liberal benching of cattleyas and a few other orchids and finds them convenient stock to carry for his own requirements. He also benches quite a few oranges for their blossoms. One of the features of the establishment just now is the display made by two houses of geraniums, for planting out on orders from his many annual customers. Finer stock would be hard to find anywhere. In one of the houses is a large stock of a new geranium which originated here a few seasons ago. It is of the Bruant type of zonal geranium, and very similar, but the color of the flower trusses is somewhat darker and possesses more of an orange tint. It also has more foliage and is more compact. Another quality, and an important one, is that it never comes blind. It flowers continually, with trusses fully 6 inches across, and when at its best throws three or more such trusses to the plant. It has been planted in the garden front of the Chicago Beach Hotel for the past four Summers, and the management will have no other, so superior for the location has it proved over other varieties tried. Any florist who knows this situation will realize what conditions a bed of geraniums has to meet, but this new variety stands the wind and weather beautifully. It has not yet been named. J. H. PEPPER.

The Foundation of Successful Violet Growing.

BY DR. BEVERLY T. GALLOWAY.

(Concluded from page 714.)

Diseases and Insects.

The violet, like other crops under glass, has its troubles; in fact, it is generally believed that the violet has more than its share of difficulties of this kind. Taking up the diseases in the order of their importance, we will call attention to one which is familiar to every florist who has attempted to grow the crop, namely, the so-called spot. The spot disease is no longer a mystery, as it has been proved to be due to a fungus, the spores or reproductive bodies of which are nearly always to be found in the air of violet houses, only waiting the proper condition of the plant to infect the foliage. There is very little to be feared from spot if proper precautions are taken to keep the plants in health. It is a comparatively simple matter to produce this disease by artificial methods. Without entering into a detailed description of the life history and general work of the fungus, the whole matter of prevention has already been summed up by me, and I may be pardoned for repeating it here, as follows: "Keep the plants, at all times, in a healthy growing condition; rigidly destroy all diseased parts of the plants; never apply water to the leaves in such a way that they cannot dry in from four to five hours; keep the leaves free from dew; and avoid fumigation with tobacco, or if tobacco is used, make the smoke as light as possible." The question of keeping the leaves of the plant dry at certain seasons is of the highest importance. From the middle of August until from the first to the middle of October is the critical time for spot. This is when the crowns are growing rapidly, and the foliage is thick. Syringing should always be done at this season of the year on days when it is certain the leaves will dry off before night. Heavy fumigation with tobacco is absolutely certain to produce spot. It produces the disease by so weakening the plant that the fungus has an opportunity to invade the tissues. In this connection I may call attention to a simple experiment which shows how important it is to keep the plants surrounded by healthful conditions. As already stated, we can produce spot at will by spraying the foliage with water in which the spores or reproductive bodies have been placed. Now, if we spray the leaves of an ordinary plant out in the open and the plant soon dries off, there is no infection. If, however, we cover the plant with a bell-jar the air within this bell-jar becomes saturated and the leaves are covered with moisture. Within from 36 to 48 hours after such a plant has been

sprayed with water containing the fungus spores, the minute spots begin to show; in two or three days more the spots are quite prominent, then if the bell-jar is removed a whitish appearance develops, indicating that the fungus has been checked by the drying off of the plant. Within another few days the plant is speckled and spotted with a beautiful case of the disease. The foliage is now all trimmed off down to the base of the crown and a new set of leaves are allowed to grow. When these have fully formed, a second inoculation is made in the same way as before. The leaves are again cut off and allowed to grow and a third inoculation is made. The leaves are again cut off, but after this it will not be necessary to make any inoculation or even to cover the plants with the bell-jar, as the spores, always present within the house, will continue the inoculating process and the plant will become infected just as fast as the leaves appear. In other words, by this continued treatment, the plant has been weakened or it has been made to develop certain conditions which make infection constant. The same thing can be accomplished in a whole house of violet plants by improper treatment either through fumigation methods, watering, or improper ventilation.

The next disease to which attention should be called is one we have named stem-rot. This is the

New Zonal Geranium.

Grower, A. McAdams, Chicago.

malady which usually starts in the cutting bench, through the use of sand containing organic matter. At first the trouble is confined mainly to the young roots, but gradually it works up to the stem. At first there may be only a very small black speck, not larger than the point of a pin. This minute speck contains the fungus, however, and if this particular cutting is placed in the bed, the fungus will continue to grow as the plant grows. No evidence of the disease appears until pretty well along in the Summer when the plant becomes of considerable size and the demand for moisture on the roots is excessive. It will then be found that the plant is wilting during the heat of the day. Matters will go on in this way for two or three weeks until eventually the plant utterly collapses and dies. I have seen houses in which from 10 to 20 per cent. of the plants will die off in this manner. The disease may be in large measure prevented by proper selection of cuttings, rigid attention to the propagating bench, and avoidance of the planting out in the beds of any plants which show signs of the trouble.

A disease sometimes found on violet foliage when the plants have been improperly handled is known as edema or wart disease. This is a dropsical-like trouble that may be brought about by over-watering and by too dense shading of the plants. The tissues of the plant become gorged with water, and the foods not being properly assimilated, physiological conditions arise which result in the production of wart-like growths wherever there is any break or puncture. The bites of red spiders, the punctures of aphides, or even the breaking of the leaves through the handling of the plant, result in the formation of large wart-like growths. Proper at-

tention to light, ventilation and watering will avoid all these difficulties.

A disease very common in violet houses at certain seasons of the year is produced by another fungus known as botrytis. This botrytis induces a soft rot of the foliage, and sometimes a whole crown may be seriously injured. Over-watering, excessive wetting of the foliage, drips or leaks in the roof, improper cleaning of the bed, and failure to remove all dead or decaying foliage are apt to bring on this trouble, especially in damp cool weather.

Another malady similar to the foregoing, but produced in a different way, manifests itself on the edges of the leaves of the plants, which die and turn white. This trouble may be induced by a number of causes. Excessive use of fertilizers, excessive use of cold water on the roots, improper ventilation of the soil, proximity of a cold outside wall—all these things may check the root development and in consequence the edges of the foliage not being properly nourished will first wilt and then eventually die. The injury has always taken place a long time before it ordinarily becomes manifest. The statements made regarding the causes suggest the methods of prevention, namely, the avoidance of the conditions indicated.

Under the head of diseases we would now mention the so-called root gall or nematodes. This disease is produced by a minute microscopic worm which infests the roots, producing the galls. The nematodes live in the soil, and to have the plants free from them, the soil must be properly handled. Nematodes are not usually very injurious to the violet where the Winters are cold and where the soil can be frozen. It is in the more southern regions that the nematode is likely to prove dangerous. The freezing of the soil, as already pointed out, will prevent serious trouble from the pest. We have used sterilized soil, producing the sterilization with steam. On the whole, however, I do not consider it necessary to adopt this somewhat expensive process where the soil can be properly handled, as already explained.

Insects and Other Pests.

One of the most troublesome insects that attack the violet is the ordinary red spider. There is little use in attempting to destroy the spider after the plants are once badly infested—better by far throw the plants away. The whole matter of combating this pest may be summed up in one word—prevention. Prevent the cuttings from becoming infested, prevent the young plants, when set into the beds, from becoming attacked, and finally, see to it that the spiders are not allowed to obtain a foothold at any time upon the growing stock. Syringing is about the only safeguard. Where sufficient water pressure is not at hand, it is best to use a spray pump. We have devised a comparatively simple nozzle for spraying plants—one that will give a wide fan-shaped spray which will easily turn over the leaves, knock the spiders off and yet produce no injury to the crown. This nozzle may be attached to a three-quarter-inch hose, and if the pressure is over 30 pounds, it is all that is required. The fight against the red spider must be persistently kept up, as after the plants attain considerable size, say about the latter part of August, it is not practicable to treat them longer. When it is not found practicable to use water, as in the case of young cuttings or large crowns, which are badly infested, Ivory soap will be found a very effective remedy. A five-cent bar of this soap dissolved in three or four gallons of hot water makes a solution that is immediately destructive to the spider. The solution should be put on with the spraying nozzle and then washed off in about an hour.

There are other insect pests to which I will briefly refer. I will not pause, however, to discuss these in detail. These insects may be enumerated under the general head of cut-worms, saw-flies, gall-fly maggots, and leaf-cutting larvae of various kinds. Up to a few years ago aphides, both green and brown, were a serious drawback to violet culture. Thanks to the introduction of the cyanide treatment these are no longer to be feared. Cyanide gas, as is well known, is made by combining potassium cyanide, 98 per cent. pure, with commercial sulphuric acid. In the old practice it was usual to figure on about 0.15 of a gram (one gram equals 15½ grains avoirdupois) of 98 per cent. potassium for each cubic foot of space in the house. Now it is the common practice to use milder doses and to allow the gas to remain in the house all night. The quantity is a matter of experiment. For a house 12 feet wide, 150 feet long, 7 feet to the ridge, and 3 feet on the sides, we have used from three to four ounces of the cyanide, allowing the gas generated therefrom to remain in the entire night. So much has been written and published regarding the

method of generating and using this gas that it is not necessary for me to enter upon further details here.

Business Methods.

I cannot close this somewhat general talk on the subject of violet growing without reference to the business practices connected therewith. A man may be ever so successful in producing the flowers and furthermore, may be able to ward off diseases and insects and other troubles, but without ability to understand and apply good business practices to the handling of his crop, he will not be able to make very much of a success.

Violets, as a rule, are sold in bunches and the manner in which the flowers are picked, handled and bunched is highly important in the matter of getting them into the market. A violet is not a violet unless it is sweet. Tens of thousands of bunches of this beautiful flower, however, are sold which have no claim for being called violets except in color and general appearance. They lost their sweetness, and in consequence their best characteristic, largely by improper methods of handling. It is a great advantage to the violet grower if he is so situated that he can gather his flowers early in the morning so that they will be put on the market the same day. To gather them at night and get them into the market the following day will, in a measure, provide for a freshness, but much of the odor will be lost. Care and attention, therefore, in the gathering, bunching, packing, etc., is of the highest importance. Where the violets are shipped any distance it is very desirable to have special packing cases made in order that they may reach their destination in good shape.

Speaking generally, the violet, if properly grown, properly handled and properly marketed, will yield as good returns per square foot of space occupied as quite a number of other florist crops. The returns will not be so large as for roses nor for carnations, but they will be sufficient to enable one to make a respectable living and also something in addition.

A Double-Calyxed Carnation.

Editor Florists' Exchange:

The illustrations herewith show a red carnation seedling, which made its appearance with me some time ago. It has a duplex calyx and flower, and perhaps may interest my brother florists and carnation breeders. In my twenty-five years' experience in growing and breeding the carnation, I never before have seen or heard of one being produced like this. Perhaps others may have done so; if so, I hope this will bring out more about this class of flower.

Let it be a freak or not, Nature produces some wonderful things. I will give you a description of this carnation as follows: The size across under the petals is 4½ inches, which covers the outer line of the carnation measuring card. The photos are very poor and do not do justice in showing the flower to advantage. The make-up of the bloom is not over-crowded with petals; it has 99 of them, a full center, round, fringed like a double poppy; measurement over the top of flower 7½ inches. The depth of the bloom is 3 inches, stem 2½ inches in length; outside calyx 1x1¼ inches, inside calyx ¾x1¼ inches. The lower half of the stem is as thick as an ordinary lead pencil, the upper half stiff and wiry to hold the flower gracefully. One peculiar fact in connection with the calyx is that the stamens come out of the inside calyx and the anthers out of the outside one. The inner calyx is not visible at any time, neither when the flower is opening nor when it is fully developed. The inner calyx prevents this extra large bloom bursting. The flower, with stem, weighs 2½ ounces, more than double the weight, also the number of petals of the ordinary large carnation.

W. E. HALL.

Clyde, O.

A NEW VARIETY OF ROSA WICHURIANA. A novelty of the present year, that actually flowers freely twice in the year, is Frau Alb. Hochstrasser, which received the second prize at the rose show held at Mannheim, on September 28, last year, the exhibitor being Christoph Weigand of Soden in the Taunus. The plant does not flower as do others, by showing a few blooms at the second time, but the plant produces on new buds numerous blooms sometimes to the number of 200 on a plant in September and October. As will be understood by the second time of flowering the harvest of bloom is smaller than by the first, but the color, white with a pinkish tinge on the central petals, is perfect, judging by the illustration in Die Gartenwelt for April 18. The bloom is double, and of a breadth of three inches. Other climbing roses at the period mentioned are completely destitute of flowers. The cultivator must naturally remove all

the seed vessels after the first flowering. The plant is now being sent out, and at an enhanced price since receiving the second prize as the best German novelty and in commerce. Horticultural Trade Journal, Eng.

The Immunity of the Japanese Chestnut to the Bark Disease.

BY HAVIN MELFALE, PATHOLOGIST IN CHARGE OF THE LABORATORY OF FOREST PATHOLOGY.

The bark disease of the chestnut, caused by the fungus *Diaporthe parasitica* Murrill, has spread rapidly from Long Island, where it was first observed, and is now reported from Connecticut, Massachusetts, Vermont, New York as far north as Poughkeepsie, New Jersey, Pennsylvania, and possibly Delaware. It is no exaggeration to say that it is at present the most threatening forest-tree disease in America. Unless something now unforeseen occurs to check its spread, the complete destruction of the chestnut orchards and forests of the country, or at least of the Atlantic States, is only a question of a few years' time.

An Immune Variety.

Observations made by the writer during the past year indicate that all varieties and species of the genus *Castanea* are subject to the disease except the Japanese varieties (*Castanea crenata* Sieb. and Zucc.). All of the latter that have been observed in the field or tested by inoculations have been

Stems of Hall's Double-Calyxed Carnation.

Hall's Double-Calyxed Carnation.

found immune. This fact can hardly fail to be of fundamental importance to the future of chestnut culture. Although the nuts are distinctly inferior in flavor to the European varieties, such as Paragon, the Japanese chestnut is already grown on a large scale as a nut-producing tree. There are, however, many trade varieties of dubious origin. Some of these may prove later to be subject to the disease. Immunity tests of all known varieties of chestnuts have been undertaken.

Attempts will also be made to hybridize the Japanese with American and European varieties, with the hope of combining the immunity of the former with the desirable qualities of the latter.

However excellent as a nut and ornamental tree, the value of the Japanese chestnut as a forest tree is doubtful. It can be recommended only experimentally at present for forest planting. It certainly will not take the place of the American chestnut. The tree is said to attain a height of 50 or 60 feet in Japan. As seen in this country it is a handsome tree, dwarfish and compact in habit, and rather slow growing. It has hardly had time to show how large it can grow.

The immunity of the Japanese chestnut, together with the fact that it was first introduced and cultivated on Long Island and in the very locality from which the disease appears to have spread, suggests the interesting hypothesis that the disease was introduced from Japan. So far, however, no facts have been adduced to substantiate this view.—Bulletin 121, Bureau of Plant Industry, U. S. Department of Agriculture.

WORKMEN WHERE CAN WE FIND THEM? The only way in which America can rise to the situation is to give similar industrial training to her rising generations, beginning it at the earliest age at which the child can hold tools and throwing the door of industrial opportunity wide to every one of her sons, says American Industries. Right at our hand is an opportunity to raise up more and better mechanics than the apprenticeship system, even in its best estate, ever furnished. Let every boy from the age of nine or ten to fourteen give an hour every school day to the use of tools employed in the more important mechanical trades, under competent instructors. Thus we will get more and better mechanics than the old apprenticeship system ever gave us. We will have new supplies of skilled workers at home instead of having to look for them among our immigrants, and being of our own household they will know our tastes and needs better than aliens.

It would, we think, be an advantage to the horticultural profession, if even a fairly large percentage of the youths taught in our schools such subjects as nature study and gardening would look to horticulture as a means of livelihood, but so far few, if any, candidates in this respect have been evolved. [Ed. F. E.]

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

Albany, N. Y.

EYRES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Boston, Mass.

WAX BROS., 143 Tremont St. Orders for New England States receive our careful attention. We are located in the theatre and shopping district. Telegraph and mail orders solicited. Satisfaction Guaranteed. Established twenty years.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2840 and 4065.

Chicago, Ill.

HAUSWIERE, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Dayton, O.

W. G. MATTHEWS, FLORIST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Denver, Colo.

THE PARK GLOBAL CO., 1706 Broadway, J. A. Valentine, Prest. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of reasonable varieties of flowers always on hand. Wire me your orders.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of reasonable flowers always in stock; delivery facilities perfect.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unequalled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Retailers desiring a share of out-of-town trade should be represented by a card in this column.

FOR THE RETAILER

[All questions relating to the Retail Trade will be cheerfully answered in this column. We solicit good, sharp photographs of made-up work, decorations, store interiors, etc., for reproduction here.—Ed. F. E.]

A Memorial Day Window Decoration.

The accompanying illustration shows one of the store windows of H. R. Hughes, florist, 690 West Van Buren street, Chicago, decorated for Memorial Day. In connection with this occasion Mr. Hughes has distributed to his customers an illustrated folder, bearing the significant title "A Flower for Memory's Sake," the full text of which is as follows:

To my way of thinking, there is no holiday more deserving of observance than Memorial Day. We Americans are a busy people, but for the sake of those who were once our friends and relatives we can well afford to give up one day in the year to prove to ourselves that we have not forgotten them.

Particularly do I believe this custom should be impressed upon our children. If we would have them remember us when we are gone, we should show them by example that we have not forgotten those who have preceded us. Besides, when we fail to honor the dead who have been dear to us, it is but one more step to cease to honor the living.

In this respect the Japanese, and the Chinese especially, can teach us a helpful lesson in reverence. No Chinaman is too rich nor too poor to forget to lay a few blossoms frequently on the sepulchre of his forefathers.

We really owe our Memorial Day to the Southerners. When the war was over in the South in 1865, the widows, mothers and children of the dead soldiers gathered flowers and scattered them over their graves. In doing this they also included the graves of Northern soldiers who had fallen in the South and were buried there. When the news of these beautiful acts of courtesy reached the North, it touched the hearts of the people and did much to dispel the sectional feeling that the war had caused, while the example was followed in every community.

It was not until 1868, however, that any particular date was chosen for floral decoration. In that year General John A. Logan, Commander-in-chief of the Grand Army of the Republic, ordered that every Post in the country should engage in fitting ceremonies and scatter tokens of respect over the graves of dead comrades. Later, legislatures took it up, and now almost every State in the Union observes May 30 of each year as a day to express our love and respect, not only for our dead war heroes, but for every loved one who has gone before.

Observance of the day need not mean lavish decoration. It is not what we do but what we feel that measures the tribute; a single blossom dropped on the grave of one who once loved us proves to oneself that he is not ungrateful.

This is the history of Memorial Day in America, but we are by no means the first people to thus honor the dead. The custom of offering floral tributes has prevailed among almost every nation of any civilization since the earliest times.

Among the Greeks and Romans flowers were intimately associated with the honors paid to the dead. It was a universal custom for the relatives and friends of one who was dead to carry wreaths of flowers to the house or place of burial, and after interment the grave was kept constantly decorated with blossoms. Moreover, the springing of flowers from the tomb was welcomed as an assurance that the departed one was in happiness. Even the stern and warlike Romans were strict in floral observance of their Parentalia, which was analogous to our Memorial Day. For long years after death, friends and relatives of those deceased continued to decorate the graves of those departed. Marc Antony, dying, begged to have roses scattered over his tomb, and Ovid, the poet, writing from the land of his exile, prayed his wife to offer over his grave chaplets of flowers wet with her tears.

From the scene illustrated is a reproduction of the monument of General Sheridan which stands in Arlington Cemetery. This cemetery is located at Arlington, Va., just across the Potomac River from Washington. It is the resting place of thousands and thousands of Civil War veterans, both Union and Confederate. It covers the estate once owned by "Light Horse Harry" Lee, of Revolutionary fame, and is where Gen. Robert E. Lee spent his youth.

How to Build a Shower Bouquet.

The above information has been asked for by a subscriber to this paper, and while there are no hard and fast rules for making a bouquet, a few practical hints may prove useful.

Shower bouquets may be used for any or every occasion, but they are more generally carried by the bride, although we frequently receive orders where they are to be carried both by the bride and her bridesmaids, and not infrequently by debutantes and the graduate. The lily of the valley bouquet is perhaps the most popular for the bride; they are made entirely of that flower in most cases, but the introduction of pure white orchids, gardenias, or orange blossoms adds to the beauty of the bouquet, and incidentally to the cost, which is seldom a consideration in bridal bouquets. I find from 150 to 200 sprays of lily of the valley are sufficient for the bouquet itself, while from 50 to 75 will

Memorial Day Window Decoration of H. R. Hughes, Chicago.

make an effective shower. Where other flowers are to be employed the quantity of lily of the valley used will be correspondingly less.

Preparation of the Flowers.

It is necessary to stem or wire all the flowers for shower bouquet work. Number 22 wire is usually heavy enough for this purpose. Three or four sprays of lily of the valley and one or two leaves should be wired together, to form little bunches; enough wire must be left on the end to form the handle after all is bound together. The flowers should be kept well above the leaves while stemming, as the finished bouquet should be as white as possible. If the stemming is properly done, it should not be necessary to use other green to keep the flowers apart, as the additional foliage will only add to the weight.

After the flowers are all stemmed, the style of bouquet to be made must be decided—the "all round" or conical, "half round" or sloping, and the "Empire," which is an exaggerated form of the sloping bouquet, and not unlike a large "bouquet de corsage" with the addition of the shower.

The Construction of the Bouquet.

The flowers now being ready the building of the bouquet commences. Strong green thread or "florist's twine" is best to tie with, and the less used the better. A good method is to gather up the flowers and commence to form the bouquet before using any twine, and then use it very sparingly. The whole body of the bouquet can be finished with a half dozen windings.

When the stemmed flowers are used up, and the bouquet is of sufficient size, a fringe of fancy ferns should be added; this is to cover up all wires and only sufficient should be used for this purpose. Then comes the final embellishment. Maidenhair fern, Adiantum Farleyense, or Asparagus plumosus is the best for this purpose, and should be used generously so that none of the common fern will

show when the bouquet is finished. This should be wound tightly, so as to form a slim tapering handle.

The Shower.

The bouquet is now ready for showering. Narrow ribbon, or gauze, number 1 1-2 or 2, is generally used; twenty to thirty yards will be necessary for a good shower. This may be attached in two ways. Possibly the easier way is to take the end of the bolt of ribbon and form a number of loops, until the bolt is used up, the loops being about four feet in length; then fasten the ends remaining in the hand with a stout wire, leaving a long end. This is inserted into the body of the bouquet, and fastened at the handle, the other two bolts being treated in a similar manner. The loops should now be cut at the ends; the lengths being allowed to vary a little. They are then distributed around the front of the bouquet so that no two ends hang together. Now tie two or three loops in each ribbon, but leave enough space in the loop to insert the sprays of lily of the valley. It is simpler to tie all the loops first, as this lessens the danger of getting the shower tangled up. After they are finished, take one or two sprays of lily of the valley with about an inch of stem below the flowers, and insert through the loops so that the sprays will hang gracefully. A small piece of adiantum is often used, and I think it is an improvement; being easily fastened by pulling the loop taut.

The length of the shower is governed by the height of the bride, but it is better to have it a little short than too long. The bouquet is now nearly complete, except for the handle; this must be thoroughly dried off, and then well wrapped with tinfoil to keep the moisture from coming through. Over this is wound white silk ribbon; or a "kid" is sometimes used. These may be obtained from the florists' supply men, and are very neat and handy. It now only remains to tie a broad sash of white silk ribbon on the handle. A single bow, with good generous loops, and ends about the same length as the shower, gives an effective finish.

D. RAYBUN.

CONNECTICUT HORTICULTURAL SOCIETY.—The regular meeting of this society was held in County building, May 22, President Huss in the chair. It was "pansy night" and the numbers surely did themselves proud, as the display was by far the best ever offered in this locality and the attendance so large that there was barely standing room in the hall. P. Zuger, H. A. Pinney and Carl Peterson were appointed judges and the awards were as follows: T. B. Brown, for culture of pansies, diploma; John Gerard and O. F. Grizmacher, for collection of pansies, certificate of merit each; J. F. Huss, Amos Reynolds and E. F. McDermott received a hearty vote of thanks for their exhibits. The event of the evening was a paper read by John Gerard on "The History and Culture of the Pansy," giving the origin and history of the various families, and describing in a most entertaining way the improvement of this popular Spring flower. Mr. Gerard is making an

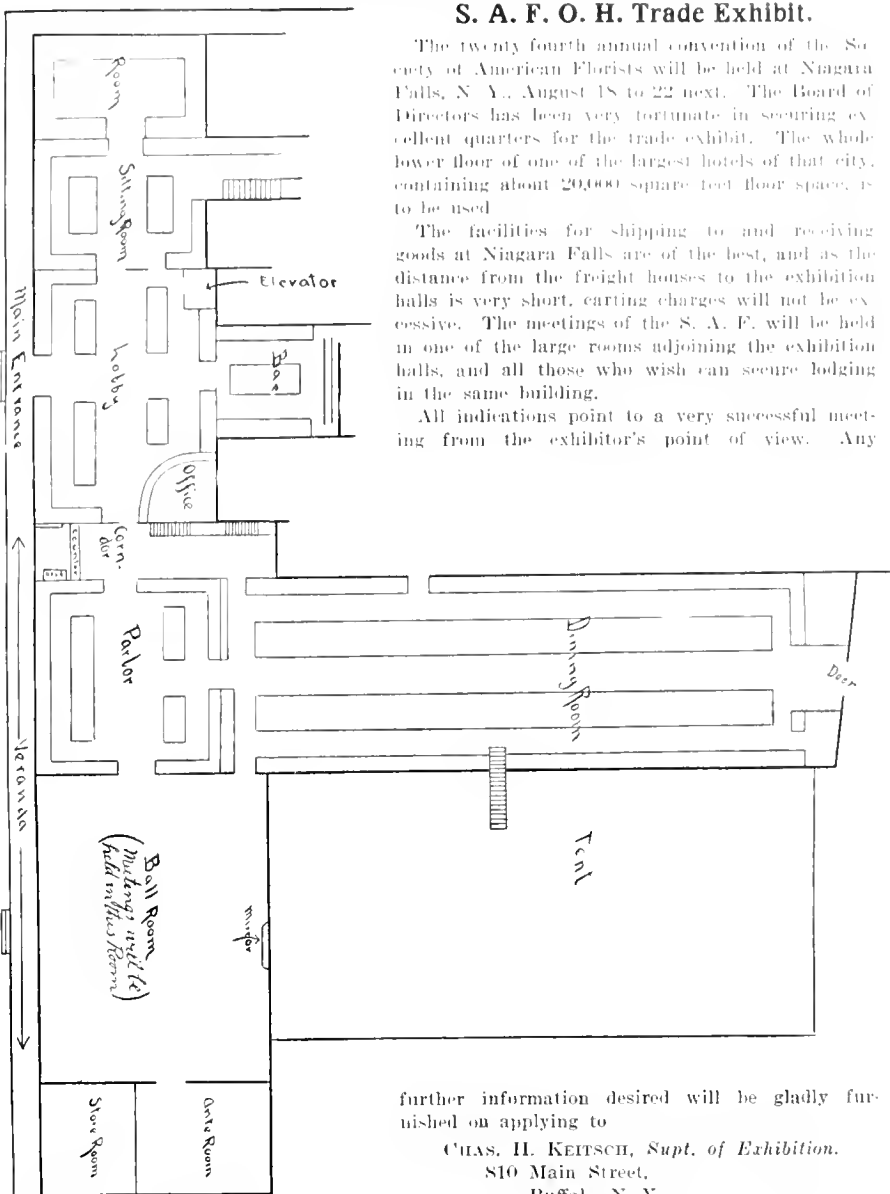

enviable record as a pansy specialist and in the course of his remarks gave many cultural hints which were highly appreciated by the members. The show was not entirely confined to pansies; a magnificent display of gloxinias was tabled by J. Chambers, gardener to the Rev. F. Goodwin. This exhibit gave every evidence of cultural skill and

S. A. F. O. H. Trade Exhibit.

The twenty fourth annual convention of the Society of American Florists will be held at Niagara Falls, N. Y., August 18 to 22 next. The Board of Directors has been very fortunate in securing excellent quarters for the trade exhibit. The whole lower floor of one of the largest hotels of that city, containing about 20,000 square feet floor space, is to be used.

The facilities for shipping to and receiving goods at Niagara Falls are of the best, and as the distance from the freight houses to the exhibition halls is very short, carting charges will not be excessive. The meetings of the S. A. F. will be held in one of the large rooms adjoining the exhibition halls, and all those who wish can secure lodging in the same building.

All indications point to a very successful meeting from the exhibitor's point of view. Any

further information desired will be gladly furnished on applying to

CHAS. H. KELTSCH, Supt. of Exhibition,
810 Main Street,
Buffalo, N. Y.

it was the opinion of members present that these were the finest gloxinias ever exhibited in this locality. Mr. Chambers was awarded a certificate of merit. P. Zuger represented the Park Department with a display of *Silene pendula*, which is being used most effectively for Spring bedding in the various parks. A. C., Jr.

Philadelphia. Pennsylvania Horticultural Society.

At the May meeting of this society, after the reading of the minutes, George C. Watson asked for a correction of the spelling of the appendage to Sander & Sons' form of Cypripedium Curtisii. The correction asked for was from nobilio to nobilior. Mr. Watson stated that he secured the information from Messrs. Sander's representative when on a visit to New York recently. After this satisfactory explanation, the correction was on motion agreed to.

A committee was appointed to make the necessary arrangements for the date of the peony, rose and sweet pea shows. If it was deemed expedient to hold all of them on the same date at the same time, the committee had the power to do so. The dates for these several shows have to be movable, because the seasons hereabouts vary in their earliness or lateness. If it is expedient to hold them all at the same time, the show will be that much more interesting to the members and their friends. The public is admitted free.

Mr. Watson made a motion that it was the sense of the meeting that the committee on awards, when examining the exhibits, give preference to hold all of them on the same date at the same time, the committee had the power to do so. The dates for these several shows have to be movable, because the seasons hereabouts vary in their earliness or lateness. If it is expedient to hold them all at the same time, the show will be that much more interesting to the members and their friends. The public is admitted free.

Incidentally it transpired during the discussion that in some societies, where the nomenclature is proven defective in an exhibit the committee on arrangements unceremoniously disqualifies same and that proceeding has a very salutary effect, because an exhibition of plants and flowers ought to be nothing if not educational to the public in nomenclature. It takes courage to carry out those high principles, but the effect is wonderfully beneficial to all concerned. One member stated that he had known of instances, where, in planting peonies, in order to secure the greater effect at the time of flowering, three roots of a given variety were planted together in a group; all three when they came into flower proved to be distinct from each other. This brings us to the reliability of the disseminators of stock that is dormant when delivered and is bought on faith alone. The only way to advance horticulture as it is entitled to, is to keep faith with the patrons thereof; a thoroughly satisfied customer is a customer for ever for the influence thus created never dies.

In the case of some plants experts and many others can see at a glance what the correct names are generally understood to be, but as regards peonies and some other plants they are collected together to fill an order, when they are quite dormant, or kept in cold storage, and there is nothing but the label to indicate what the name is supposed to be, and this is why so much confusion in the nomenclature of peonies exists.

In the collection of cut flowers on exhibition many were hardy herbaceous plants. The most imposing display was that made by Samuel Batchelor, gardener for Clement M. Newbold, Esq., Jenkintown. Among them were the hardy native Cypripedium pubescens, the deep purple Siberian iris, Phlox divaricata—a distinct form from that seen growing generally around Philadelphia, showing how variable this native phlox is. Distinct forms of columbines were also shown. The native Aquilegia cana-

ACHYRANTHES, red, nice, luscious plants, from 2 in. pots, 2 1/2 in. pots, 3c. ALTERNANTHERAS, red and yellow, from 2 in. pots, 2c., from flats, bushy, \$12.00 per 1000.

IVY GERANIUMS, from 4 in. pots, \$6.00 per 100. Cash, please.

FLORAL HILL GARDENS (G. F. Neipp, Prop.) CHATHAM, N. J.

denis—Sutton's hybrids and Sutton's pink—all of which are very interesting. A white form of Viola cornuti was conspicuous, so also were Dodecatheon Meadia, Boronicum excelsum, the Heuchera sanguinea, sometimes called red lily of the valley, Papaver nudicaule, the Iceland poppy and the apricot tinted flowers of Papaver pilsosum. Deep violet blue spikes of Lupinus polyphyllus showed to good advantage. The dark purple German iris, Black Prince also Iris Florentina—the fleur-de-lis, which is said to produce the orris root of commerce—were also in good form.

Among the May-flowering tulips were some fine parrots in Sam Batchelor's exhibit; also Gesneriana rosea. In two different entries was one variety under two names, namely, Margaret and Picotee. It was not the variety generally grown under the name Picotee. One beautiful variety labeled Beauty of America comes nearer to the true type of the picotee. It was certainly "picotee-marked," being very delicately yet decidedly penciled with pink on the edges of the otherwise white petals. There was also the Gretchen, a fine variety of a very delicate pink color. The two yellows—Bouton d'Or and Golden Crown—showed up well. There were quite a number of the dull colored bizarres enlivened with flakes and stripes of much lighter colors.

H. E. Michell Company offered prizes for May-flowering tulips, which were awarded as follows: James Hurley, gardener for James W. Paul, Esq., first, and Samuel Batchelor, gardener for Clement Newbold, Esq., second.

EDWIN LONSDALE.

Around Town.

Mr. LaGierse of 4653 Lancaster avenue has been very busy for some time with funeral work. This store is near a large cemetery and Mr. LaGierse does considerable cemetery work. He is very well known among the West Philadelphia people as the oldest florist west of the Schuylkill river.

H. Bayersdorfer & Company have received a new line of Italian pottery suitable for decorative purposes and table work. The coloring of this pottery is exceedingly fine and artistic.

M. J. Callahan, 3804 Market street, made a nice funeral design this week consisting of a large saddle composed of Killarney roses, lily of the valley and carnations. Mr. Callahan is assisted in this work by J. A. Eastwell, formerly with the well-known firm of Smith & Fetters, Cleveland, O. Mr. Callahan recently found it necessary to add another icebox.

Mrs. Anna Hursh, 810 Girard avenue, has a very attractive window display. Mrs. Hursh has been and is making up numbers of designs for Memorial Day. She is making a specialty of potted ferns, of which she has a splendid display.

S. S. Pennock-Meehan Company have about half of their force working part of the evening shipping out stock. Mr. Meehan is on duty with the men, giving his personal attention to all shipments.

Edward Reid has some fine fancy carnations and special American Beauty roses, and reports some good sized shipments to outside points.

W. E. McKissick is handling fine Killarney roses, asparagus and dagger ferns.

John McIntyre has put on another delivery wagon. He reports bright prospects for a good Memorial Day business.

Leo Niessen is showing some fine potted ferns and reports good trade in them at this time. Some excellent lily of the valley and American Beauty roses are also seen at this house.

P. M. R.

St. Louis.

News Notes.

Arnold Ringier, traveling representative of W. W. Barnard Company, Chicago, was in the city a few days the past week looking after the firm's interests.

Henry Ostertag of Ostertag Brothers reports an order for six hundred long-stemmed American Beauty the past week for the opening of the Third National Bank's new quarters at Broadway and Olive streets.

The sad news of the death of everybody's friend, William Scott, caused many expressions of regret among the trade in St. Louis, and all desire to extend their sympathy to those who are left to mourn his loss.

R. J. Windler has been very sick the past week, having undergone a painful operation. Miss Rose Windler, his sister, who has charge of the store, reports that he will be out in about ten days.

Charles Schoenle, Carl Beyer and W. Smith, trustees of the Florists' Club, will visit the different locations proposed for the yearly picnic. It would not be surprising if the outing should take place near Belleville.

The Bentzen Floral Company, Riesson Floral Company, Fred. C. Weber, George Waldbart and others had large designs for the opening of the Third National Bank Building last week. It was estimated that nearly \$1,000 worth of flowers were sent to the building that day.

Mullanphy, florist, Grand avenue, reports that he was awarded the contract to furnish the decorations for the Central High School and the Yeatman High School graduates. These decorations, including the bouquets, are generally very large.

Fred. Plant of the Plant Seed Company states that he had a good time at Chicago while attending the meeting of the Western Association of Seedsmen, held at the Auditorium Annex on May 16. He was the only representative from here who attended.

Grimm & Gorley's large delivery wagon was used by a bank the past week to transport \$50,000 in money to its new building. As no one would think of robbing a florist wagon, the plan was a good one, and was carried out successfully.

It has been stated around the wholesale houses that the bosses, Messrs. Kuehn, Smith, Augermuller and Berning, would assist their employees in the coming baseball game against the retailers at the Florists' Club outing in July. St. Patrick.

BROOKINGS, N. D.—Professor N. E. Hanson, horticulturist at the State agricultural college, expects to leave within the next few weeks for another trip through Russia and Siberia for the United States Department of Agriculture. He has been notified by Secretary Wilson of that department that assurances have been received that Congress will appropriate money for the expedition and he has been granted a six months' leave of absence by the board of regents. The object of Professor Hanson's trip will be to gather hardy grasses and cereals, particularly of the alfalfa family, and he expects to go over much of the ground covered by his previous trips.

MANCHESTER, N. H.—Bids for the placing of plants in the parks and commons of the city have been called for by the street and park commission, contrary to the practice prevailing in former years of dividing up the work among the several florists of the city, who had anticipated the same this year. They were surprised, it is said, on receiving the call for bids a few days ago. Several of the florists had gone to the expense and trouble of ordering the plants, expecting they would go right ahead with the work as in former years.

THE WEEK'S WORK

Timme's Timely Teachings.

Hanging Baskets.

Most people who buy ready stocked hanging baskets from their local florist, or order baskets to be filled, have but a vague idea as to the amount of attention required in the care of these swinging plant colonies during Summer. Immediate effect alone speaks loudest in proclaiming their value for garden, arbor or porch adornment, and endurance of beauty thus exposed to conditions adverse to even the toughest of living vegetation is rarely questioned. Florists, however, in filling baskets, should strive to meet as far as possible both requirements. Unless customers insist upon having this or yonder kind of plants used, though indeed unfit for the purpose, the selection of material should be wholly entrusted to the one who does the filling. No reputable plant grower's collection is so limited in variety of stock at this season as not to afford what is sure to combine durability and attractive appearance, immediate and long lasting. Baskets, most satisfactory in this the most unsatisfactory of outdoor plant disposals, are those stocked with the thriftiest of young flowering plants from small pots, any now showing bloom and sure to continue throughout the entire season, planted not too closely, into very rich old compost, not sandy nor of the stiff, baking kind, but rather soft and woolly to the touch. Anything soon out of bloom, though nice now, or greedily feeding plants, needing nearly all the soil for themselves, should not be used in the filling of baskets. Nor should those with delicate foliage or leaves gradually drying and dying off from the base up to the newer growth be employed. And, finally, baskets should never be swung to wind and sunheat before the plants have had time to become somewhat firmly rooted in the soil.

Vases and Boxes.

The filling of vases, window and portico boxes is work all florists, favorably located, are called upon to do every Spring, as much this year as ever in previous seasons, it would seem. Small urns, or narrow but deep vases, mostly of the reservoir type, holding one large plant, produce when thus filled the best effect. Hydrangeas, nephrolepis, dracaenas, agaves, phoenix and latanias in proportionately large specimens and many other rare and common kinds of foliage and flowering plants may here be used to advantage. Very rare specimens of palms, pandanus, dracaenas, agaves, etc.—that is, rare as to size and fine condition—we prefer to leave in their pots, lining the space between pots and the inner walls of the vases all around with moss. Less perfectly shaped plants of these species for the center of large vases, to be stocked with a collection of others, may be used. Here harmony as regards form and especially luxuriance of growth rather than color of foliage or bloom is sought, rather a riotous intermingling of vigorous plant life from crowning centerpiece down to the wealth of drooping and trailing green, than the hungry looking, formal flower bed, rigidly confined within the compass of a flat vase.

Rich and lasting color effects, on the other hand, must be aimed at in the filling of window boxes. Upright and trailing flowering plants that do finely all Summer, if planted in boxes and cared for in anything like reasonably decent manner, are not scarce, even if geraniums and vincas were expressly mentioned as not wanted in the order. When their use is not prohibited in this wise, we employ these two, that have so faithfully served the purpose for many a season, quite freely but not exclusively, there being lots of material to choose from among greenhouse plants and even annuals of many kinds, that might be used in the filling of plant boxes to advantage, where great variety is pleasing to patrons.

Geraniums.

To have all or the greater part of zonal and ivy-leaved geraniums in bloom when the call for them is highest may or may not be an indication of their having been under the best of good culture, but it shows its efficacy in enticing buyers, nevertheless. Reasonably tight planting into sandy, not over rich soil at every potting, the full light and an abundance of smartly circulating fresh air, all calculated to induce normally progressing growth, firm, short-jointed terminal development of shoots and branches, hastens the appearance of bloom and buds on geraniums. Anything like forcing, as a last resort, under sun heated, insufficiently ventilated glass will not have the desired effect. Neither does their coming into bloom in good season depend on early or timely propagation or untimely removal to frames after their last shift. Geraniums, by the way, are fast coming to the fore as Winter-flowering potted plants. For this purpose there are any number of single, semi-double and double-flowering varieties of old and new geraniums that permit of being worked into fine, most attractive specimens, a surprise to growers unfamiliar with any but the standard bedders. Cuttings may be rooted at any time; those struck in March and April and now in small pots will be sturdy, well-branched, flowering plants by Christmas. In the case of some of the newer English and Braunt varieties continuous culture under glass has led to the making of the freest flowering and altogether most perfect plants.

Nephrolepis.

A thrifty grower of plants after a prosperous clearing of stock in lively barter allows no room thus gained to remain unemployed for any great length of time. No better use at this season can he make of a bench or two than to devote it to Boston ferns, old and new. Let the bench be well drained, and cover the bottom with thinly cut strips of green sod, the grass down, of course. Four inches of compost on this completes the filling of the bench with soil. It should be of a sandy nature and tolerably rich in nicely crumbling old manure. Young stock, now planted into the bench, will by September and October attain the size most desirable in potted Boston ferns for retailing all Winter through. Light, direct and unrestricted, is necessary to keep the growth from becoming watery and soft, but fierce sun rays during mid-day had better be intercepted by a screen or frame device affording a measure of shade. When potting up in the Fall a somewhat heavier, less sandy soil should be used and any excess in firming it should be avoided.

Chinese Primulas

Provision for successive lots of primulas from Fall until Spring is made by the sowing of seeds at various times with intervals of from four to six weeks, the last to take place at about the last week in June. Sod soil in a well forward, turf-like condition and leaf mold, fit to be sifted, form after thorough intermixture and the addition of some sand a good medium on which to start the seeds. Kept covered with paper and evenly moist soon results in germination. The seedlings from this time on fare much better in partially shaded cool outdoor frames with sashes constantly opened a few inches at the back, or all around in fine weather, day and night than under the best regulated greenhouse conditions. A re-planting into the free soil of frame or boxes once or twice causes the seedlings to make a sturdier growth than the immediate potting up from seed pans. In their last shifts a soil containing less sand and leaf mold, but instead a moderate amount of thoroughly decayed fertilizing matter, should be employed in connection with well drained pots.

FRED. W. TIMME.

Stock You Need Now

COLEUS, from 2 1/2 in. pots. Golden Queen and Crimson Verschaffeltii, about 20,000 of each. We have also 25,000 plants of eight other good varieties. Price: \$2.50 per 100; \$22.50 per 1,000.

SALVIA, BONFIRE and SPLENDENS, from 2 1/2 in. pots, \$30.00 per 1,000.

The Week's News.

To-day (Saturday) will be a busy day for the retailers, more particularly those located near the cemeteries. It did not seem possible a week ago that peonies would come in in time for Memorial Day—that is, in quantities; but with the local supply of the old red variety, and the pink and white sorts that are arriving from a distance, there have been plenty of peonies for all. Other outdoor flowers that have been available this week are lilac, polygonum, iris and lily of the valley; these have all been in quite heavy supply, much to the disadvantage of greenhouse-grown flowers.

Surrogate Ketcham, of Brooklyn Surrogate Court, recently handed down a decision in the matter of the accounting in the estate of James Weir, Jr., the well-known Brooklyn florist, recently deceased, in which he upholds the action of the executors, the widow, Margaret A. Weir, and James B. Weir, in their management of the estate since the death of the senior member of the firm. On the accounting there was a question raised as to whether the estate was entitled to share in the money and book accounts in the hands of the firm and undivided at the time of Mr. Weir's death.

E. G. Hill, Richmond, Ind., sailed on the Etruria Saturday morning en route to Paris, France, where he will act as one of the judges at the international exhibition of roses in the open air, from June 1-15. All the newest varieties will be on display.

The many friends in the trade of John Young, wholesale florist, 51 West Twenty-eighth street, secretary of the New York Florists' Club, will learn with regret of the death of his mother, Mrs. Thomas Young, which occurred at her home in Passaic, N. J., on Friday morning, May 22, aged eighty-one years and eighteen days. The interment was in Cedar Lawn Cemetery on the Sunday following. Besides Mr. Young there are three other brothers left to mourn her loss—Thomas Young, Jr., retail florist at Forty-second street and Fifth avenue, New York; George Young, rose grower, Clifton, N. J., and William Young, also a grower at Clifton, N. J. There are also two sisters, one of whom resides in England. It is six years ago this month since the father died at an advanced age, going past the four-score mark.

Louis Goldfarb, wholesale dealer in cut flowers at Thirty-fourth street near the East River, is laid up at his home with a sprained ankle—a very painful and severe case. It was thought at one time that his foot would have to be amputated, as blood poison threatened; fortunately, the physicians got control of the injury and Mr. Goldfarb is on the road to recovery now.

Andrew Scott of Alex. McConnell's retail store, journeyed to Cincinnati last Saturday, May 23, in charge of a large number of funeral designs Mr. McConnell furnished for the funeral of a prominent resident of that city.

Another meeting of the Association of Retail Florists, recently formed in Brooklyn, was held at the Imperial Hotel on Tuesday evening.

The ruling of the express companies which recently went into effect, making a separate charge for empty boxes, is responsible for the establishing of a motor wagon service for the purpose of collecting empty boxes throughout the wholesale district for the different growers located on Long Island. The service is being put in operation at Valley Stream, L. I., and will cover all the intervening points between there and New York City.

Thomas Jones, the well-known orchid grower of Short Hills, N. J., has recently purchased a nice farm ad-

joining his present place and will make a nursery of it for the growing of flowering and decorative shrubs. Since embarking in the orchid business Mr. Jones has been eminently successful.

It is with deep regret that we learn that A. D. Rose, the well-known florist of Montclair, N. J., is confined to his bed with a serious illness. Mr. Rose has been in poor health for some months and has spent several weeks in the South hoping to be benefited thereby.

Andrew Scott, the well-known buyer for Alex. McConnell, sails with his wife on July 22 for a six weeks' vacation in Europe.

W. Van Kleeft, Jr., who has been here representing W. Van Kleeft & Sons, nurserymen, Boskoop, Holland, left for home to-day (Saturday) on the steamer Statendam.

David McKenzie, foreman for John Scott, will shortly set sail for Scotland, where he will spend a vacation at his former home.

Among recent visitors in town were Peter Bissel, Washington, D. C., and Patrick Welch, the well-known wholesale florist of Boston, Mass.

The rose show to be held in the New York Botanical Garden, Bronx Park, under the auspices of the American Rose Society and the Horticultural Society of New York, will take place on June 10 and 11.

The Krebs' place at Elmhurst, L. I., has been leased to Charles Peterson of Whitestone, L. I.

A. M. Henshaw's sister and her husband, Mr. and Mrs. George V. Britton, have arrived from England and will make a business and pleasure trip of the Eastern part of the country. Mr. Henshaw intends to take a little vacation while they are here and show them some of the country.

H. A. Bunyard, with the firm of A. T. Boddington, arrived home last Saturday from his Southern vacation trip.

Ladies' Night.

The ladies' night of the New York Florists' Club took place on Wednesday evening, May 27, and was one of the most successful affairs the club ever held. We did not have the opportunity to count how many were present, but we think we are safe in saying that the number approximated two hundred; this, too, in spite of the almost torrid weather. The chairman of the house committee, W. Richards, is certainly to be congratulated in the manner in which he so successfully carried through the affair. He was ably assisted by his lieutenants—Duggan, Manda, Fenrich and Schultz. The ladies were well taken care of in the way of refreshments, as the well-known caterer Mazzetti was engaged for the occasion, and a bounteous supply of all the good things necessary for a light collation, with plenty of liquid refreshments in the way of punch and lemonade, was provided and thoroughly enjoyed by all. For the male portion of the audience more substantial viands were offered in the way of roast turkey and beverages of all descriptions, both soft and hard.

A rather elaborate musical program was provided, and the selection of artists had been carefully done, resulting in a diversified entertainment, some part of which was sure to please everybody. The artists were Miss A. V. Brown, soprano; R. Mullen, tenor; Mr. Kreshover, violin soloist; Robert Young, a fifteen-year-old Scotch impersonator, a youth who evidently wants to follow in the footsteps of the great Scotch comedian, Harry Lauder, and who bids fair to make a success of it; and Baby Lanning, a little girl, seven or eight years old, who did some very fine terpsichorean feats, including both minuet and flag dancing.

Sergeant Cameron with his bagpipes and troupe of Scotch dancers was one of the favorites of the evening. The troupe consisted of Misses Jeanie Birnie, Flora Cameron, Maggie Sorlie and Robert Young. Another feature was a little girl named Baby Eleanor, who sang delightfully. The singing of a lullaby by Miss Brown, a duet by the same lady and Mr. Childs, and the character sketches by Robert Young were particularly admired and applauded, as also was the dancing of Baby Lanning.

FOR SALE

PIPE Good serviceable second hand with good threads and a coupling with each length, no junk—1 in. 3c.; 1 1/4 in. 4 1/2c.; 1 1/2 in. 6c.; 2 in. 6 1/2c.; 2 1/4 in. 10 1/2c.; 3 in. at 14c. and 4 in. at 19c. A New Labor-Saving Bench.

No, it is not another concrete bench in some form of modified mold or pattern, but an out and out, *cast iron bench*—a bench which the makers claim two men can erect 500 square feet of in a day, or half the time it takes to put up the same amount of wooden benches. To this great economy in time also add the tremendous advantage of its lasting indefinitely.

For many years the Lord & Burham Company has been tussling with the bench problem, endeavoring to secure an everlaster that would be practical as an

erection, right drainage and unlimited endurance. It must work out considerably cheaper than the well-built concrete bench, and has the advantage of being portable or adjustable to any general change in bench arrangement. With concrete benches still somewhat of an experiment, and their tendency to crack or crumble if not made exactly right, it would seem that this cast iron bench more nearly meets all the requirements. Think what the quickness of erection of such a bench would mean to the man whose house has been delayed and his crop is coming on! T.

For benches wider than 3 feet 6½ inches, center legs are necessary. Truss, modified main fitting and slotted cap are required.

expenditure for the florists. The great success of several beds having cast iron bottoms, which were erected for Superintendent Ballentine, in Mrs. F. F. Thompson's orchid house at Canandaigua, N. Y., was the first step that led to the firm's now fully developed and perfected entire cast iron bench.

Its construction is the simplest possible, one fitting doing practically all the joining. The sides, ends and bottoms are cast in separate pieces. To erect the bench, the legs are put in the socket of the main fitting and held in place by a set screw; the cast iron sides, each 4 feet 2 inches long, are bolted to the main fitting, the bottoms bolted to the flanges on the sides, and with the ends secured, the bench is complete.

At intervals of 8 feet 4 inches the

The main fitting, leg and base socket.

legs are braced with a crossbar connected by clamped fittings, which, being adjustable to any height, also form a support for the heating pipes.

For benches wider than 3 feet 6½ inches, a center leg equipped with slotted cap fitting to carry the cast iron truss, and a modified main fitting are necessary.

The sides of the bench are cast in lengths of 4 feet 2 inches, and are 5½ inches high and ¼ inch thick. A molding at the top adds to the strength and gives a finish. The bottom pieces are 1 foot wide and in various lengths. They are cast with ridges or trusses every 2 inches on the under side, giving them a strong reinforcement. The upper surfaces of the bottoms being perfectly clear, and all bolt heads countersunk, there is no obstruction for the shovel to catch on when removing the soil.

Here then is a bench made up of a system of units, admitting of various combinations and arrangements; one meeting the requirements of economy of

Detroit.

Trade and News Notes.

Business is moving along slowly. With the advent of numerous outdoor flowers the shops are all loaded down with goods. The continued warm weather has started inquiries for outdoor plants, but reports from those whose business it is to plant flower beds and fill vases are anything but encouraging. Still the season is young yet, and we all hope that this line of business may come up to that of years past.

The Lohrman Seed Company is now fully established in its own new build-

ing and enjoys the possession of much more convenient quarters and very light and attractive salesrooms. The firm's counter trade is far ahead of that of former years.

The young man reported some time ago as having defrauded several local florists through ordering floral designs and paying for them with forged checks, and who aroused sympathy by shedding tears profusely, earning for him the title of "tear artist," has been sentenced to imprisonment for four years.

Florists' Club.

The last regular meeting of the Florists' Club was well attended, principally on account of the death of William Scott of Buffalo, which sad news spread like wildfire among the craft early in the morning. The following resolutions, drafted by the secretary, J. F. Sullivan, were adopted:

"Resolved, That by the death of

With masonry walls, a fitting is made to clamp the cast iron sills. Where narrow center walks are necessary, to make working the benches easier, the walk is elevated as shown.

William Scott this club realizes that floriculture and horticulture have lost one of their best friends and most earnest advocates. He was always foremost in all movements calculated to advance the floricultural and horticultural interests of the country, and was a conspicuous contributor to the floricultural literature of his time; the great value of which is highly appreciated by thousands of persons engaged in the florist business. His cheerful disposition and most amiable nature endeared him to thousands of friends throughout the country by whom the news of his death will be

been equal to the demand. Nothing new in the line of flowers is on the market. Sweet peas are more plentiful and sell quickly. Owing to heavy frosts last month lilacs are not as abundant as usual and will nearly all be gone before Memorial Day.

E. P. Holm is staying at the greenhouses all the time these days, looking after the firm's outside planting orders.

O. J. Olson and A. Clausen returned a few days since from their trout fishing expedition well supplied with fine specimens.

W. J. Eldering of Overveen, Hol-

This is the clamp fitting which makes the crossbar.

Sides, end, bottom and main fitting in their relative positions, ready for bolting up. Note the strengthening ridges or trusses, running lengthwise of the inverted bottom.

End view of the side with its molding at the top and flange with slotted tongue every 7 inches, to which the bottoms are bolted.

received with the deepest sorrow. And

"Resolved, That this club shall send a floral offering to his funeral, conveying its deepest sympathy with his widow and family, also a copy of these resolutions." F. DANZER.

St. Paul.

Trade Notes.

Spring trade has been up to the average though the rainy weather has kept down the volume of business to a certain extent. Bedding out has fairly begun and every one in the trade is busy in that line. Stock has

land, and Horace Cheeseman of Vaughan's Seed Store were recent callers.

The Twin City Florists' Club meeting, held at Holm & Olson's store, May 19, was not very well attended, but a very interesting session was held. A resolution changing the constitution and by-laws was presented for ratification at the next meeting. A. Christensen of the Minneapolis Electric Company gave an interesting talk on "Plant Growing by Electric Light" and expressed the opinion that in the not far distant future the color of flowers under the influence of electricity would be changed at will by the mere pressing of a button.

VERITAS.

An eight foot bench. Note way heating pipes can be carried by the crossbearers.

And so you continue to connect the unit lengths of 8 feet 4 inches, until the bench is the desired length, and with the ends in place, your everlaster bench is complete.

The American Carnation Price, \$3.50
A. T. De La Mare Ptg. & Pub. Co., 2 Duane St., New York

REVIEW OF THE MARKET

NEW YORK.—Business continues rather quiet. The recent warm weather has had a very bad effect on flowers in general and roses and carnations in particular. There is an immense number of American Beauty roses coming in just now, and while 15c. each can be obtained for a few of them, it requires going through several hundred flowers to pick out twenty-five of the top grade; consequently, the general average on this rose must be a very low one. Bride and Bridesmaid are in nearly as bad a condition; they are opening very quickly and the majority of sales are made in straight slips at prices such as are quoted for No. 1 or No. 2 grades. There is as yet a heavy supply of carnations, and though it has been the week before Memorial Day—a week when carnations generally advance a little in price owing to the shipping trade—there has been no possible chance of increasing prices this week. Good blooms can be had at anywhere from 50c. to \$1.50 per 100, and, if bought by the thousand, even cheaper than that.

Cattleyas are quite plentiful just now, and prices are anything but firm. The supply of yellow narcissus and tulips has dwindled to nothing almost, but they are not missed, as there are plenty of other things to take their place. Peonies are coming in quite heavily; 50c. per dozen is asked for the red variety, officinalis, and for the best pink and white varieties \$1.00 per 100 has been obtained. A great many of these, however, have deteriorated in quality during shipment and have to be sold at a much less figure, which will reduce the average price considerably. Lilies are still plentiful and are not bringing half as much as they did this time last year. Cut Spiraea japonica and polygonum are in quantity, and for Memorial Day these two flowers are probably the most serviceable of any that are cut from outdoors. The demand for green material, such as asparagus, smilax and ferns, continues quite poor, and prices for these are yet low.

CHICAGO.—The market is suffering from an oversupply brought about by the extremely warm weather of the past few days. Roses and carnations have suffered principally. Most of the rose stock arriving is soft and open and goes for anything it will bring. Choice to select stock comes within the range of quotations on account of its scarcity. Carnations are very plentiful, but poor in quality, and after the best are taken from arrivals the rest go at any price obtainable for the different gradings. Clean cut transactions have been noted as low as a dollar a thousand. Lilies are not over plentiful, growers conserving their cuts for the holiday. Peonies are coming in quite briskly, with some showing of fine stock, prices running from 25c. to \$1 per dozen. The best stock, however, is being carried in the ice boxes, and appearances indicate that there will be a sufficiency for Memorial Day, especially as flowers grown nearby are coming in. Cattleyas are in much better supply; C. Mossie is most prominent, and good in quality. Large quantities of tulips are still arriving but show the effect of the weather, consequently are not taken. Sweet peas are plentiful, although the quality is no longer of the best, and prices naturally have dwindled. Iris, candidum lilies, cornflower, candytuft, daisies, and antirrhinum are plentiful, and move fairly well.

Memorial Day business is setting in lively, and there have been plenty of shipping orders booked. Without doubt there will be ample stock of all kinds for the requirements of the holiday, but with a continuance of the present weather really choice offerings will be on the short side.

Hardy ferns from cold storage have dropped to clearance prices on account of the appearance of new stock.

J. H. P.

CINCINNATI.—Business was the worst ever during the past week and the garbage cart was the best customer. There simply was no life at all, and thousands of carnations found their way to either the hospitals or the dump pile. Roses are not quite so plentiful, but what few we did have were not wanted. The outlook for the coming week is much better, and we hope to make up some of last week's losses. The extreme hot weather is ruining the carnations, and box after box arrives asleep. We must, however, take the bitter with the sweet and hope for better things in the future. E. G. G.

BOSTON.—Trade continues in a rather unsettled condition and while a good week is expected there are several features which will help to keep the local business from superseding former Memorial Day sales. Outdoor flowers of many kinds, especially the lilies, are now in their full glory and will continue so till the end of the week. Roses are still very plentiful and sell at from 50c. up to \$6. Some of the finer grades bring a little more, but some fine flowers bring very cheap. Richmond and Killarney continue to be favorites for the better class of work. Kaiserin Augusta Victoria and Souvenir du President Carnot are both now appearing in fine shape; these are still two of the best Summer roses. American Beauty do not have such a demand at this season; the extra fine grades bring as high as \$25, but there are very good grades sold at \$10 and \$15. Carnations are abundant and of fine quality; the colored and dark varieties have the best demand. The general price is \$1, \$1.50, \$2 and \$3, while some extra fine dark colored sorts sell for \$4.

Sweet peas are plentiful, selling at from 25c. up to 75c. and \$1. Lily of the valley from out of doors is abundant; it brings from \$1 to \$3. Lilies are plentiful but sell slowly; the general run of prices is \$4, \$6 and \$8. Marguerites are quite plentiful, but they sell well at \$1 and \$1.50. There are lots of candytuft which brings 25c. and 50c. a bunch. Antirrhinums are abundant at \$3 and \$6. Spiraea are always plentiful at this season, selling at \$2 and \$3. Gladiolus brings \$3 and \$6. Tulips of the late varieties are plentiful, selling at from 50c. to \$1.50. There is a good call for green goods; hardy cut ferns are in demand notwithstanding the prices are higher than last year. Asparagus Sprengeri sells well and there are lots of A. plumosus in the market. J. W. D.

ST. LOUIS.—Trade conditions in our market have not changed, and since my last report the rainy week has caused the florists to buy cautiously. There was really too much stock thrown on the market the past week and considerable was wasted at all of the wholesale houses, especially in carnations and roses; also a lot of outdoor stock which is coming in each morning. As to prices, we must say that these are very low, and in some cases would not look well in print. With Memorial Day at hand trade should pick up somewhat, and no doubt by Saturday the prices will advance a cent or two on fancy stock.

We are having too much rain to suit the greenhouse men; in fact, hardly a day has passed this month that no rain fell.

ST. PATRICK.

PHILADELPHIA.—The warm weather of the past week is to blame for the large quantity of cut stock seen in the local commission houses. Peonies are now very plentiful; the local condition of peonies is directly opposite to that of a year ago when the cold weather delayed their arrival until after Memorial Day. Prices on them range from 4c. up to 15c. for the very best. Some excellent carnations are to be had at 3c., but the ordinary grades run from 4c. to \$1.50. American Beauty are fine in some of the houses, but the demand is not great. Sweet peas go very slow. Asparagus in long strings seems to be in demand and some extra fine stock is shown. A large number of out of town shipments are reported by the wholesale houses. P. M. R.

INDIANAPOLIS.—The thousands of blossoms crowded upon this market find but little relief under conditions almost as stagnant as those of Midsummer. A temperature of 93 degrees in the shade has no mercy on the florist business at this season. Masses of carnations and other flowers, which, under ordinary conditions, would be available for Memorial Day, are barely able to withstand forty-eight hours of the present weather. The price for carnations varies from \$1 to \$2 per 100, at the buyer's option. Richmond, Kaiserin Augusta Victoria and La France are the best selling roses, at \$5 to \$7 per 100. Many shorts for funeral work are offered at 75c. to \$1 per 100. Harebell lilies and callas are frequently consigned to surrounding cities at \$10 to \$12.50 per 100. Sweet peas at 50c. per 100, and lily of the valley at \$2 to \$3 per 100 are the most satisfactory flowers for corsage purposes. Well-grown centaureas and Spanish iris find a sale quickly at 75c. to \$1 per 100. Fleur-de-lis (French iris) is seen on every hand and is of value for

decorative purposes only. The peony cut is about right for Memorial Day; any number of them are offered at \$2 to \$4 per 100. Home-grown, new crop fern leaves are in general use, as such a large percentage of the cold-storage ferns are not marketable. The bedding season continues at a merry gait, and the reports from this source are most encouraging. I. B.

FIRMS WHO ARE BUILDING.

Items for insertion under this heading are respectfully solicited from our subscribers. They are published free of charge.

BLACKWELL, OKLA.—John Heintz is building a rose house, 25x80 feet.

LITTLETON, COL.—T. S. Culp is preparing to erect a large greenhouse on Harrison street.

BOONE, IA.—Martin J. Lockard is erecting new greenhouses, and hopes to double his space next year.

MISSOULA, MONT.—The Missoula Nursery Company states that its business the past season has been very flattering; in fact, the demand has exceeded the supply, consequently the firm will require more greenhouses.

CHANGES IN BUSINESS.

The Florists' Exchange will be pleased to publish under this heading all changes occurring in the addresses of firms connected with the trade as well as notices of concerns or individuals just starting in business. All such items are inserted free of charge.

ST. JOSEPH, MO.—McGuire & Haefeli have moved into new quarters at 718 Felix street.

LOWELL, MICH.—E. J. Kinyon has erected a greenhouse and started in the florist business here.

OTTAWA, ILL.—Mrs. Fred. King has moved her florist store from 524 La Salle street to Madison street.

READING, PA.—Irvin H. Anderson has taken charge of the old Brookside greenhouses and is remodeling the place.

PROVINCETOWN, MASS.—I. & A. E. Biram are starting in business here as florists; a greenhouse is nearly finished.

MIDDLEBURY, VT.—Charles Bingham has purchased George Sheldon's greenhouse in Salisbury and will soon move it to his father's farm east of the village.

DES MOINES, IA.—The Guthrie-Lorenz Company has been incorporated, with a capital stock of \$3,000, to conduct a florist's business here.

MAYWOOD, ILL.—Harry G. Young, of Nineteenth avenue, has established a flower business near Mt. Carmel cemetery, known as the Mt. Carmel Flower Company.

STRETATOR, ILL.—Omar Fanning and his mother-in-law, Mrs. Ermie Eades, are preparing to build a greenhouse here. They will give especial attention to the growing of cucumbers.

WATERLOO, IA.—An organization to be known as the Waterloo Landscape and Nursery Company is to be established here. The company will have a capital stock of \$10,000 and the stockholders will consist of a number of prominent business men and will include nearly all the landscape gardeners in the city. The company will be authorized to do a general landscape business, handle nursery stock, do transplanting and the handling of trees of all kinds, etc. The following are the officers that will be in charge of the business during the first year: President, Walter Brown; vice-president and treasurer, C. R. Turner; second vice-president, Mark Wyant; secretary, C. H. Dietrich.

NORTHAMPTON, MASS.—In the appropriation bill recently signed by the Lieutenant-governor is an appropriation of \$34,000 for a new range of greenhouses of modern commercial type, with an attached teaching building for use of the floricultural department. It is not the intention of the college to engage in commercial floriculture, but a new range adapted to giving the students up-to-date instruction in methods of growing out flowers for the trade is badly needed.

Plant for Name.—T. H. S.—Eunymus alatus, a native of China and Japan.

Reading, Pa.

Jacob C. Bauder, 913 North Tenth street, reports business this year so far a little better than last season. He has an attractive store with plenty of light from all sides and the roof. The design work shown by Mr. Bauder was very fine, and there are some good orders on hand at this time for Memorial Day business.

Mrs. Clara Blockman, 116 North Ninth street, is having a good run of trade and is getting some nice orders for Memorial Day. She has been in about the same location for the past fifteen years and is ably assisted in her work by her daughter.

E. H. Beears & Son, 38 North Ninth street, report general good business; the orders for Memorial Day are coming in very nicely and trade is expected to be better than last year.

Visitors this week included R. Q. Shoch of W. E. McKissick; Mr. Jones of S. S. Pennock-Meehan Company; Arthur Niessen of Leo Niessen Company, and representatives of H. Bayerdorfer & Company and M. Rice & Company.

John Giles has one of the most attractive stores in town and seems to be getting enough work to keep his entire force going most of the time. The store is finished in white and gold, and is located in a busy part of the town. At this time he is working on some outside decorations at one of the local parks and is also making up a lot of Memorial Day designs. Mr. Giles is a member of the local Board of Trade and is one of the best known men in Reading. One of his greenhouses is connected with the store, which makes it very handy for him to cut stock as needed.

The Penn Flower Shop is located on the principal business street, and the frequent changing window display is one of the local attractions. The proprietor, Mr. Kellar, is noted for his courteous treatment of the traveling salesmen who visit his place.

H. J. Huesman of the Brookside Cut Flower store reports good prospects for Memorial Day. His greenhouses are located at Schuykill avenue and Greenwich street.

The seed store of Aug. W. Masser is now a most busy place, more so than in former years. Mr. Masser believes in getting the best to be had and charges accordingly, but he also gets the trade.

The Reading florists all seem to be busy, although the purchases are not as extensive as in former years, owing to the large number of people out of work. The street peddler is an unknown quantity in this town. The best trade at this season is in bedding stock and the sales have been very good. Most of the cut stock handled is shipped from Philadelphia commission houses, each of which sends a representative up here almost every week.

Showers were very plentiful most of the week and made local planting disagreeable and slow. P. M. R.

Washington, D. C.
Trade Notes.
Washington is suffering from a glut in peonies; the hot wave brought them out by the scores. In addition to those grown by the trade many of the country folk, who conceived the idea a few years ago that there was a fortune in peonies, entered into competition with the grower and the result is now being felt. Should such torrid weather conditions last there is a very slight probability of enough home-grown peonies to fill orders for Memorial Day, which, as a rule, relieves the market of an oversupply.

The sales of bedding stock have not been very satisfactory this season, owing, many think, to the general depression in commercial circles which seems to go hand in hand with the presidential election year; this applies locally to almost every branch of trade.
During the past few months some excellent improvements have been made by the respective florists who occupy stands in Center Market; chief among these are the well-arranged display stands of Harry Robey and F. H. Kramer.
David Bisset, Garret Park, Md., the well-known violet expert, has torn down his range of glass, water tower, etc., and is moving same and rebuilding at his new home several hundred yards distant. Mr. Bisset is arranging a model plant and will from present prospects, by Fall, be in a position to cut even more excellent flowers than before.
David Grillbortzer, Alexandria, Va., who was married recently to Miss Dreifus of that city and took an extended Northern tour, is back at business and receiving the good wishes of his many friends.
JAS. L. CARBERY.

Boston.

News Notes.
 Robert and Frank Edgar will withdraw from the W. W. Edgar Company June 1 and will run the new establishment on the hill under the firm name of Edgar Brothers. They will continue to grow plants and flowers for the general wholesale trade. The old place near the Waverley station will be continued by the W. W. Edgar Company, with H. S. Bartsch as manager.

Samuel Beck, who has been salesman for James Tulis of Sudbury for the past six years, has severed his connection with that grower. Mr. Beck intends to spend some time in New York before relocating.

H. Hanson of Malden and F. J. Dolansky of Lynn are each shipping a fine lot of well grown dracaenas which have a good sale for vase and box work.

Charles Evans has a fine cut of outdoor lily of the valley.

The sad death of his son, a young man twenty-two years old, by being struck by a train in Bridgeport where he was employed, came to Paul Reysik of the wire department of Welch Brothers last week.

Penn has a busy store on Bromfield street at all times. Design work is a specialty with him and he has been exceptionally busy lately.

Hoffman continues to make his store attractive with seasonal flowers. A neat sign in the window gives the European steamer sailings from New York and this city.

W. H. Elliott, Brighton, has an extra fine stock of young grafted roses in all the popular varieties. He is one of the largest growers in the country, and this year his plants are better than ever before.

J. W. DUNCAN.

Rochester, N. Y.

Trade Notes.

The last week was one of ceaseless activity in all branches of the trade; and with a continuance of good weather there is a prospect of good Spring sales.

The attendance at the last meeting of the Commercial Florists' Association, with Fred Vick as president, warrants the actions of some committees who are investigating the advisability of a Fall flower show. This project seemed to meet with general approval.

The cut flower market is naturally at a standstill, although good stock is somewhat scarce. No set price can be quoted on any one article, as the quality varies considerably.

Some effort was made to raise the price on bedding stock, geraniums, etc., but was not a success, some even selling below the usual figures. Whether the price will ever go up is a conundrum, but with increased cost of labor, coal, horse feed, etc., something will surely have to be done and that soon. Admitting, of course, that this is an off year, financially, what better time for a raise in price, when business is a trifle slow, and current expenses are even more than formerly? When some of us wake up one morning and find the sheriff at the door, we shall wonder why, but the reason will be apparent then as it is now to

New Items.

Tomlinson Hall market enjoys a better trade these days than the flower shops. The masses are accommodated there with thousands of bedding plants at 5c. to 10c. each.

Frank Lichtenberg, manager for Wolfskill, the Los Angeles florist, will leave for his home city in a few days. The Roepke & Rieman Company has taken possession of the Smith & Young Company's establishment, and has enjoyed a brisk business from the start. This is one of the few deals with which both parties are immensely satisfied.

John Rieman furnished a large order of red carnations to the Masons last week.

Canterbury bells, hydrangeas, feverfew, gloxinia and calceolaria plants are offered for Memorial Day.

John Bertermann and family have taken up their summer residence at Cumberland.

B. F. Hensley of Knightstown was a recent visitor. He is planning to erect three new houses, 28 x 200 each, this summer. A bright future is predicted for the West View Floral Company, of which he is the proprietor.

Chicago.
News of the Week.
The bankruptcy proceedings against the J. D. Thompson Carnation Company, Joliet, Ill., have been dismissed by order of court, the concern being declared solvent. At the hearing it was shown that the assets amounted to about \$60,000, with an indebtedness of less than \$11,000.
Miss Tonner, who has charge of the florists' supply department of the A. L. Randall Company, has been confined to her residence for several days through illness.
Extra long-stemmed Richmond roses are a feature of the daily receipts from Morton Grove, at Poehlmann Brothers Company's store.
The Des Plaines Floral Company, Des Plaines, is cutting some splendid Bride gladioli, and shipping it to the J. B. Deamud Company, where it is quickly disposed of.
The conservatory at Washington Park at present furnishes an excellent display of pelargoniums, calceolarias, and fuchsias, the exhibit of each comprising quite a collection of varieties. The large flower beds in front of the conservatory have been planted with bedding stock, and will soon be in their glory. The park borders are ablaze with flowering shrubs, and the excellent system followed in displaying the names of the different subjects makes the planting doubly interesting to visitors who appreciate an education of this kind and do not fail to take advantage of it.
The Albert F. Amling Company, Maywood, is building five 300-foot additional greenhouses, which are to be stocked with American Beauty roses.
Jensen & Dekema have a house of single and double stocks in all colors, from which a large daily cut is taken.

In their carnation houses quite a lot of benching has been done already. Field work has been hindered by the rainy weather, but all hands took advantage of the few fine days last week and planting is approaching completion.
August Ericson, of Bowmanville, is cutting heavily from a splendid crop of carnations. Boston Market, Enchantress, Mrs. T. W. Lawson, and Mrs. M. A. Patten are the varieties. Mrs. T. W. Lawson is in excellent shape, and the unfavorable comments made generally as to the passing of this variety could not be substantiated here. The flowers show excellent color, and are borne on very long stems. Two benches, side by side, form an object lesson as to the value of indoor and outdoor planted stock. One bench was planted with indoor stock, and the other with field stock. The former came into cut much earlier, and has produced better flowers. Both benches are looking grand, but even now the advantage of the indoor bench stock is plainly seen. The indoor stock furnished a fine cut for Thanksgiving, but the field stock did not make much of a show before Christmas. There are five 140-foot houses and a 116-foot house in the establishment, and an additional house, 34 by 116 feet, is going up this Summer.
At the establishment of J. A. Budlong considerable work was accomplished last week in the benching of early chrysanthemums.
H. A. Banske is cutting a nice crop of American Beauty, Richmond, Bride and Bridesmaid roses from his houses on North Western avenue. The stock in the benches appears to be in the pink of condition, and its uniformity of growth speaks volumes for the careful culture which is here prac-

used. Mr. Banske, not a believer in the policy of discarding tea roses after three or four years' growth, and some of his stock is pointed to as being ten or more years old, but, of course, having the soil in the benches replenished.
J. A. Peterson of Cincinnati was in town last week and, as usual, carried a fat order book away with him.
Much interest is taken in the big model now on view in Blackstone Hall in the Art Institute, showing the proposed improvements in Grant Park, and the Lake front. The improvements are extensive in character, and provide for an unusually liberal arrangement of trees, and open spaces for flower bedding effects.
Chas. W. McKellar reports a good demand for cuttleyas. He has some very fine C. Mossie arriving daily—large full flowers, excellent in color.
Vaughan & Sperry have just installed a commodious ice-box in their quarters at the Flower Growers' Market. The new box is a welcome addition to the firm's facilities for handling their peony business which is heavy just now.
Bassett & Washburn and Poehlmann Brothers Company have occasionally on their counters some blooms from a small stock of "Red Kaiserin" roses which they are trying out. The rose has all the characteristics of the white variety with the exception of the color, which is really a deep pink, something midway between the deepest tone of the Mrs. Potter Palmer rose and that of American Beauty. As a commercial variety it is quite promising.
S. E. Dangle, representing the Ellis-Chalmers Company of New York, is in town talking Plant-Blood to the trade.
Word has been received here that the East End Floral Company, Memphis, Tenn., is in the sheriff's hands.
The Poehlmann Brothers Company has benched several thousand carnation plants from 4-inch pots, the finest ever planted in their establishment.
Dominick E. Freres, salesman with J. J. Kruecher, was married on Tuesday, to Miss Mary Muno, daughter of John Muno, of High Ridge, Ill.
J. H. Pepper.

The horticultural books, some 350, together with catalogues, pamphlets, etc., on subjects pertaining to the trade, belonging to the late Edgar Sanders, have been donated by his daughter, Mrs. Victor, to the John Crerar Library of Chicago, where there is already a fine collection of books on horticulture. About 50 or 60 miscellaneous volumes have been given to the Newberry Library; while all his political and historical works on Chicago or Lake View have gone to the Chicago Historical Society. It was the hope of Mrs. Victor and the other members of Mr. Sanders's family that some arrangements could be made whereby the volumes relating to horticulture could finally come into the possession of the Chicago Horticultural Society, when that organization should have a library of its own; but as it was necessary to dispose of the books as early as possible, and no city library would accept them in trust, the plan carried out, and here referred to, was ultimately adopted.

GUTHRIE, OKLA. The house has ordered to engrossment the Hawkins bill relating to insects and diseases which are injurious to growing crops, nursery stock, fruit and shade trees, bushes, shrubbery, and vines, grains, fruits and vegetables, providing for the establishment and maintenance of quarantine regulations for the purpose of preventing the introduction and dissemination of the same and injurious plants and providing for the inspection and regulation of nursery agents.

NEWPORT, R. I. George W. Klotz, a former naval apprentice, has been arrested, and has confessed to breaking into the store of Henry J. Haas, florist.

SEATTLE, WASH.—David Shanks, a horticulturist and planter of the well-known Shanks orchard at West Seattle, died Sunday, May 17, 1908, at the family residence, 531 Thirtieth avenue, south. He had been suffering for about three months from cancer of the stomach.

Mr. Shanks was born of Scotch parents in Quebec, Canada, in 1846. He moved to California in 1883 and ten years later went to Seattle. On the uplands at West Seattle Mr. Shanks planted his orchard and brought his trees to perfection under the dry-culture system. The orchard is acknowledged as probably the finest west of the Cascades. He moved across the bay two years ago. He is survived by his widow and one son, George.

Pittsburg.

Trade and News Notes.

There was very little improvement in trade the past week, but the prospects for the coming week look fairly bright, as some nice orders for Memorial Day are booked. There will be considerable outdoor stock which will have a tendency to keep down prices on flowers grown under glass. The demand for flowers for the decoration of graves is increasing from year to year and will likely be good this week regardless of the dull times. Iris and peonies are in best demand among outdoor stock; some nice blooming branches of Southern magnolias and coral plants are very attractive, but rather frail. Carnations and roses are in good shape, the weather being very favorable with no great heat as yet, excepting to-day, the 25th, when the thermometer was trying hard to get near the nineties. The plantmen will have a busy week; the markets are full of stock, but trade is hardly as active as it should be and prices are lower than last season.

Faulk Brothers, florists in the North Side market, received an order for a most unique floral design to be placed on the grave of George E. Smith, who was well known as "Pittsburg Phil." among the followers of the race tracks of the country and whose home was in this city. It will be a floral horse, life-size, and will be made mainly of white carnations, requiring many thousand flowers to fill the frame. The wire frame was made by the Florists' Exchange and it was the first order for anything of that sort they ever filled. Faulk Brothers had the order last year for a floral horse-shoe about 8 feet long.

G. & J. W. Ludwig had a nice order for the decoration of the Music Hall in the Exposition building the past week, for the Frohsinn Singing Society, also for the exhibition of the children of the public schools.

The news of William Scott's death at Buffalo was quite a shock to our florists, for he was well known and well liked by all. E. C. Ludwig and Fred Burki sent floral designs to Buffalo for the funeral.

Frank J. Farney, traveling for the A. L. Randall Company, wholesale florists of Chicago, was a visitor the past week—his first visit to our city, which much impressed him. H. A. Bunyard also spent a few days in town.

F. Schreiber, who has been employed by G. & J. W. Ludwig in the North Side market for some time, left for his old home in Austria last week.

As a recognition of William Hamilton's 30 years of service in charge of the North Side parks some of his florist friends who have known him well tendered him a banquet last week—a very pleasant affair, much appreciated by Mr. Hamilton. Among those present were Messrs. Falconer, Negley, Semple, Loew, Burki, Langhans and Clark of the Pittsburg Cut Flower Company; Mr. Demas of the Florists' Exchange, Price and Fraser, private gardeners; Mr. Moore and Mr. Jones, foremen of the park conservatories; Bader, Randolph and Wyland, prominent growers; Mr. Frischkorn of W. C. Beckert, seedsman; G. J. W., E. C., and De Forest Ludwig and your correspondent. It was a very sociable gathering. Mr. Falconer acted as toastmaster and called upon everyone present to make a speech.
E. C. REINEMAN.

WOONSOCKET, R. I. — Simon Colitz, proprietor of the Rustic Flower Store, will on June 11 marry Miss Ida Caplan, daughter of Mrs. Esther Caplan, Roxbury, Mass. The wedding will take place at Mindt's Hall, Boston.

W. M. Riggs, Director.

Dear Mr. Pearce: May 20, 1907.
We have just received the larger Tobey heater, and within a few days we will install this and return the smaller one to the J. L. Mott Iron Works. We are turning over to our treasurer for payment, the balance due you, which amounts to \$200.00.
In concluding this transaction, I desire to express to you my hearty appreciation of the excellence of your work, and the honesty and courtesy of your methods. We believe that we have one of the best greenhouses in the South, and any time that you need a good word, I hope you will not fail to call on us. Yours truly,
W. M. RIGGS, Director.

Tested by Time and Proved by Experience

The United States Government never specifies an inferior article. Thirty years ago Uncle Sam became our customer. He is with us yet, and at every Army Post, and in many of the Post Office buildings in the United States you will find the

New Dunning Boiler

Minimum Fuel Expense because the high crown sheet of the ample fire box insures intermingling of oxygen with coal gas and combustion of this mixture at high temperature.

New Dunning Boiler—Portable Steam

Maximum Heating Results because three long vertical fire-travels insure absorption by water through large, vertical heating surfaces of every heat unit. No efficient heat goes up the flue.

The **NEW DUNNING** will prove itself if you give it a test in **YOUR Greenhouse.**

Wrought steel plates, long lapped and hot riveted. **No Corners** to deaden heat. **No Flat Surfaces** to gather sediment deposits. **No Tubes** to obstruct flame and impede water circulation. Easy to set up—Portable or Brick set—easy to operate, easy to pay fuel bills for. Guaranteed in every particular.

Send for our 38th Edition Illustrated and Descriptive Catalogue, a plain, common sense explanation of the **NEW DUNNING BOILER**

Read! Read! Read!

Every Particle of Heat

is absorbed from the gases in the "Spencer" Heater owing to its superior combustion travel. The numerous tubes passing through the intense heat, split the water up into thin small streams instead of holding it in one large body of water over the crown sheet. These tubes are made of knolled wrought charcoal iron, the highest price tubes in the market.

The "Spencer" has the most thorough combustion, is the quickest heater and gets more heat out of less coal than any other heater made.

Investigate it before laying in your coal supply and save money.

Send for Catalogue, also ask for our Greenhouse Catalogue "The House of Greatest Sunlight."

Talks on Greenhouse Material

No. 1

How to select the best material for the construction of a greenhouse, and the time it takes to paint the same. Now you should be know that it takes more paint for rough lumber than it does for smooth lumber and it takes much longer to put it on too. If your greenhouse material is not nicely machined and perfectly worked you are being money every time you move your paint brush in any new saw stroke. You can get perfect material from us, and you won't need to use a gallon of paint to a sash bar on either. Now look into this item of paint and see if you haven't lost a few dollars here and there that you thought you saved by buying low priced goods. This is only one argument, but there are a hundred more we can tell you of if you want to know them. Get one of our catalogues and then let us talk the matter over.

TAKEN FROM OUR CALENDAR

JUNE'S the dream month, a fellow can't help it when the sky is so blue and the birds are so care-free—who wouldn't be happy if singing all day and flitting about was all there was to it? But don't you fool yourself; they're busy all right, mighty busy getting their nests ready. Why don't you take a pointer from them, and get your benches ready and wiring frames up? We have the most complete, practical thing going, in the way of bench fittings, the kind of thing you've been looking for.

Then our wiring frames are all that a good, handy-to-put-up, last-forever frame should be—use these things and you, too, will sing like the birds.

Speaking of benches—there's our new all Cast Iron Bench—you can put it up in half the time it takes for a wooden bench and it will last every bit as long as concrete—and in some cases is even better. Send for particulars and prices.

LORD & BURNHAM CO.

FISCHER'S GRAND PURITY FREESIA

This is the finest Freesia ever offered to the trade and the only one worth growing. The flower heads are of very large size, of astonishing whiteness, and of thick heavy substance, making its keeping quality superior to all others. The stems, always stiff, can be grown two feet and over, making this magnificent Freesia one of the finest decorative flowers. It can be used entirely alone in this respect or with other long-stemmed flowers.

The greatest care is taken by us to keep this beautiful Freesia pure and free from all danger of mixing, by carefully picking off all seed pods; not allowing one to ripen and drop its seed in the ground, where it would surely grow the next season and work disaster, as it does not come true from seed.

So, beware of buying stock that has been increased from seed. You will always find Purity here in all its purity.

Send in your orders early, for last year the orders far exceeded the supply. This year we hope to fill all orders and offer first and second-grade bulbs for sale.

Send for Price List. Delivery in early July.

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION
George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

HICKORY, N. C.—The Hickory Seed Company has been chartered with \$20,000 capital for general seed and grain growing and the sale of seeds of any and all kinds. The incorporators are R. O. Abernathy, W. J. Shuford, L. R. Sticker and A. L. Shuford.

ROCKY FORD, COL.—Burnet Landreth of the D. Landreth Seed Company of Bristol, Pa., and F. W. Bruggenhof of J. M. Thorburn & Company of New York, were guests of D. V. Burrell, seedman, May 22. Mr. Burrell took them over some of the country in his auto to show them some of Colorado's best irrigated farms.

For the past two weeks there has been but very little water in any of the ditches here except the Rocky Ford ditch. Farmers under other ditches began to be discouraged, but we have had rains in the mountains, so these ditches can draw water now and everything looks promising for a good crop.

BOSTON, MASS.—Maurice Fuld, of W. W. Rawson & Company, dealers in seeds and bulbs and secretary of the New England Dahlia Society, was the speaker at the May meeting of the Houghton Horticultural Society at the lecture hall of the Lynn public library. At the outset Mr. Fuld spoke of the development of the seed business in Boston, and in various ways showed how the large firms handle their business. A contrast was

made in the business of 20 years ago and that of to-day, the speaker believing that a great amount of the increase was due the good work performed by horticultural societies, such as the one in Lynn. Mr. Fuld illustrated his remarks with cut flowers from the company's grounds at Marblehead, and gave some valuable cultural advice.

CLOVER AND GRASS SEEDS.—The Bureau of Manufactures is in receipt of a communication from a German business man, in which he states that he would like to get in touch with American firms engaged in the exportation of clover and grass seeds. In applying for address refer to No. 2303.

IMPORTS OF SEEDS, ETC.—May 27.—H. Frank Barrow, 38 cases plants, 10 tubs laurel trees; C. A. Haynes & Company, one case plants; Hussa & Company, nine cases plants; O. G. Hempstead & Son, 10 cases plants; Kraemer & Foster, six cases plants; Maltus & Ware, 14 cases plants; P. H. Petry Company, two cases plants, 24 tubs laurel trees; C. B. Richard & Company, 26 cases plants; Julius Rochrs Company, 33 cases plants; Vaughan's Seed Store, two cases plants; O. G. Hempstead & Son, one case flower seeds, May 28. H. M. Baker, 350 bags clover seed, May 29, 30 and 31.—J. W. Hampton, Jr. & Company, 15 packages grass seed; H. F. Barrow, 20 packages seed; Maltus & Ware, two cases plants. June 1.—Maltus & Ware, eight cases live plants.

Seed Trade Notes.

The more pleasant weather of the past few days would seem to have given the over-the-counter trade a new lease of life; in fact, reports from all sections most pleasingly verify that retail sales, while of course now becoming individually smaller, continue in such good volume as to make most satisfactory totals. Not in many seasons have those seedsmen who handle vegetable and bedding plants approached the total sales of the last few weeks, and this branch of the trade bids fair to continue for some little time yet. Of course we must remember that in the Eastern States especially, the intermittent rainy weather has furnished ideal conditions for setting out all kinds of plants. Filling-in orders from the general trade to the larger distributing seedsmen continue in goodly numbers, so it can truly be said that we go into June with every branch of the business in especially good shape for the season.

The continued wet weather has, of course, held back the sales of insecticides, and the various remedies for plant diseases, but the last few days have well started the trade in this direction also.

ROSES

In Variety, 2, 4, 5 and 7 in pots in extra fine condition. Write for particulars.

The Elizabeth Nursery Co.
ELIZABETH, N. J.

Our Specialty

In the Fall will be **HOME GROWN LILiums, GERMAN and JAPAN IRIS.**

When in the market let us quote you prices.
JOHN LEWIS CHILDS, Floral Park, N. Y.

The June special quotations of the larger seedsmen are also being sent out, giving attractive rates for turnips, spinach, fodder corn, millets, and other reasonable seeds, which owing to the scarcity in so many other lines will be sure to be planted much more largely than is usual.

None of us wishes to borrow trouble, but we must not lose sight of the fact that the present condition of the seed crops is not over satisfactory; in fact, it really begins to look in many directions as if another seed selling year of continued high prices was before us for 1908. All know that the continued rainy weather of practically the past five or six weeks has not only very materially delayed much planting, but has also more or less injured early sowings of almost everything; this condition applies especially to the Eastern States. In California, on the other hand, a continued drought is daily cutting down the expected seed returns. It is, of course, very early to even hazard an estimate, but if on the average two-thirds of a seed crop is finally harvested in this Pacific section, no surprise will be felt, unless some much needed rains are very shortly forthcoming. Again, most reports so far received from Europe are not particularly encouraging as regards the coming season's crop of seeds; such reports, combined with our own present outlook, would seem to indicate at last firm prices for standard seeds for at least another year.

It seemed early in the season as if we were destined to have an off-year with Spring bulbs, but it is very pleasing to be able to note that on the contrary extremely large sales have been made. The total sales of dahlias have been the largest in years; especially has the better class of named varieties been in demand. As regards gladioli bulbs, little need be said, the total disposed of being fully up to the average of the largest sales of previous seasons. Tuberoses have sold fairly well, but have certainly gone slowly with many dealers. It is satisfactory to note that the splendid improved varieties of Iris Kaempferi, which our Japanese friends have been for several seasons sending us, are meeting with steadily increasing sales each Spring and Fall. I will take space here to just note, that no bulbous plant with which you can supply your best trade will give more real satisfaction than these brilliant blooming Japanese irises, Peonies, lilies, tuberous-rooted begonias, montbretias, tigridias, and the rest of the Spring bulb list, have sold very well, comparatively few surpluses being reported. There would seem to have been almost a run on Hyacinthus candicans; everybody has wanted it. On the whole the Spring bulbs have this year been a much more than usual profitable investment. V.

European Notes.

While we in the north are soaked to the skin as we pursue our crop inspections, the south reports a drought which seriously hinders the work of transplanting and is causing the carrots to wilt considerably.

Some excessively hot days have brought things on with a big jump, and if these conditions continue, we shall not be very much behind last year. The clover plant is in splendid condition at present; how much of it will be seeded cannot be stated definitely at present, but unless we learn of a prospect of a big crop on your side the high prices of the past two seasons will tempt growers to bet it stand.

Azalea Amœna For a Border Line

There are so many uses for deciduous and evergreen shrubs for forming border lines that it is no surprise that *Azalea amœna* is now not uncommonly seen used for such a purpose. The foliage of this hardy evergreen makes but little display, and is, therefore, of but little advantage to it in the way of enhancing its beauty; its color, too, is of an iron green, so but little is claimed for it for its evergreen character. Its charm is altogether in its lovely rose-colored blossoms in the month of May. These flowers never fail it in Spring; it is always sure of a good crop, and the blooms are usually so abundantly displayed as to hide all else of the bush. It is a very slow growing azalea, making no more than three to four inches a year unless on young, vigorous stock; and, besides, much of this growth is of a spreading nature, so that the natural growth presents a rather flat, bushy outline.

It is an excellent plant for a situation calling for a low, bushy border shrub, to give a display of color in the early days of Spring.

For propagating purposes indoor plants are best, as the wood is softer than that which outside plants afford; but as this azalea is now called for by the thousand in some cases, propagating shoots are looked for from outside plants. These may be had in late Autumn or early Winter and, rooted in a greenhouse, they are nice plants by Spring.

June Budded Peach Trees

The value of June budded peach trees lies in the producing of salable trees in far less time than under the old system. There is no other benefit, unless it may be in the smaller size of the June budded tree, a small tree being preferred by many purchasers. The June budded tree gives a subject of about three feet in height the same season it is budded, while under the ordinary system of raising peach trees the tree is not salable under two seasons. Peach stones are sown in the Fall, the seedlings appear in Spring, and set out in good soil they make a growth strong enough to bud in June. The usual way leaves the seedlings to grow the whole season, the budding to be done in September, and being late in the season the bud lies dormant until the Spring following. The bud inserted in June, if it "takes," will push forth at once if properly treated. This consists in shortening the top growth, so as to force the sap into the bud. It is not well to shorten the top radically, as this weakens plants so, but some check must be given or the bud will not start out. The bud needs watching, and as it pushes forth and advances in growth the top above it may be shortened more and more until the whole of it is reduced to but an inch above the bud. This inch is to tie the budded shoot to as it advances in growth. By selling time nice three-foot trees are ready, a year in advance of those under the old plan; and it is well understood that a customer is as well or better served when supplied with a small peach tree than a large one.

Hardiness of the Cherry Laurel, *Cerasus Caroliniana*

The Baltimore correspondent of *The Florists' Exchange* mentioned recently that the officials of one of the parks of that city were getting supplied with a great quantity of the cherry laurel, *Cerasus (Prunus) caroliniana*, from the South. As it was not known to us that this *cerasus* was hardy enough to live out at Baltimore information was sought from Mr. Riggs of Waterloo, Kansas, who we knew had experimented with this and other evergreens not overhardy. We have a letter in reply in which, after lauding the beauty of this evergreen laurel, he says it is quite hardy there, but the soil it is in is light, warm and sandy, where growth is short and sturdy and wood ripens up early in Autumn. Were the soil cold and stiff he does not think the plant would endure their Winter, for, he says, the mercury gets below zero at times.

This statement, however, proves this laurel much hardier than believed, and, without doubt, if set out in a well sheltered spot it would get through our Winter, as many another plant does.

Cerasus caroliniana in its native home makes a tree 30 to 40 feet in height, but in cultivation it is made to grow in all sorts of ways, being trimmed into the semblance of walls, pyramids, arbors and all manner of fantastic forms.

It would be advisable for those who consider trying it to obtain plants or seeds from the most northern State possible, North Carolina or Virginia, that the Winter here may not prove too severe for it, and the chances of its thriving in Philadelphia would be very good.

Beauty of Spiraea Van Houttei

As one beautiful shrub after another makes its Spring display the plant lover is indeed puzzled to know which would be the one he would choose were he limited to but one. Just now, to add to the general magnificent display of the season, the *Spiraea Van Houttei* is in wonderful beauty. All shrubs seem to surpass themselves this Spring. This *spiraea* has slender branches always, and when it is in flower the blossoms, though not heavy, weigh down the branches profitably, so that the whole bush is a veritable weeper for the time being, and so clustered are the flowers that the whole bush is under a close canopy of white blossoms. Many persons think if the shrub of their choice were they confined to one. It is hardy everywhere, practically.

In addition to its use on a lawn it is often seen set as a hedge or border line, and one can imagine the effect of a long line of it in flower. It lends all the white-flowered *spiræas* without a doubt, being better even than the old favorite *S. Reevesii*. As a not shrub it sells well when in bloom.

As is the case with many other plants raised here with us, they are only annual growers of the cold or warm countries. They are woody growth. But with us there is no need to think of wintering the plants in a hothouse. They are readily raised from seed, sown in early Spring, the plants grown in pots until June days, come with their heat and moisture when they may be planted out. Give them deep, moist, rich soil, to ensure the grandest plants.

There are several varieties of the common form, one called *Gibsonii* has bronzy purplish leaves.

Beech for Shelter Trees

Where reasons exist for desiring a shelter belt and evergreens are not wanted, the English beech can be well recommended for the purpose. Although a tree naturally it bears pruning very well, so that if its usual height is not desired it can be kept down almost to the usual hedge size.

What makes this beech so useful for sheltering is its retention of its old foliage through the Winter. Its leaves die in Autumn, just as those of all deciduous trees do, but though dead they do not fall from the

Ricinus communis, Castor Oil Plant.

Clematis Montana

It is a pleasure indeed to find from Mr. Freeman's communication that *Clematis montana* does well at Washington, D. C. The cause of those dying, that were tried here some years ago, could not have been the cold weather, and a further trial must be made. Those who have seen this vine completely covering the face of dwellings in the south of England will remember its great beauty, and it was the viewing of such a sight that led to the importing of a few plants some years ago, with no success, as already reported.

Sometimes in connection with the *clematis* could be seen the *Passiflora coriuba*, covering a large space, but it does not flower until later in the season. But what a show it makes when it does bloom! This *clematis* will not endure our Winters, and only in such favored spots as the south of England is it seen in perfection.

Ricinus Communis, Castor Oil Plant

The castor oil plant has been known in cultivation for hundreds of years, and its general use in gardens to-day is proof of its worth. In fact, there are not many plants that could fill the position it does as an ornamental subject for Summer use. It is often seen set out as a single specimen, but it is only when many are together that its value is most apparent. Our illustration represents a number of plants grouped at the end of a border of miscellaneous subjects, roses, herbaceous plants and like kinds; and, as the position is on an eminence, the effect is very good.

The castor oil plant is also known as *Palma Christi* to some gardeners. Its origin is supposed to have been in tropical Africa, but it has long been known in all tropical countries as well as in others, everywhere valued as an ornamental plant for Summer use.

tree, but are retained until the sap rises in Spring, when they fall, making way for the new ones which are about to form. Although dead the leaves have not the appearance they would have were tree and all dead. There is something in the appearance of the tree and its leaves that tells you the tree is alive, so that there is nothing whatever of disfigurement in the appearance of the dried foliage.

This beech is not as often met with as a hedge as it is in Europe, but there are some examples of its use in this way. Where there are trees or anything else which it is desired to shield from high winds, the English beech is good for the purpose. It becomes a thickly branched object when pruned annually, so that for lessening the power of windstorms it is quite the equal of evergreens.

Beeches need care in transplanting and heavy pruning, which, when given them, usually ensure their safety.

JOSEPH MEEHAN.

SEATTLE, WASH., is being pointed out as a desirable meeting place for the American Association of Nurserymen in 1909. Among other attractions it is said that, "during 1909 the Alaska-Yukon-Pacific Exposition will be held at Seattle for which occasion very favorable rates will no doubt be made by the railroads. By assisting the members of your association in locating the next meeting on the Pacific Coast, you will have an opportunity of visiting the exposition, which bids fair to be one of the best and most interesting ever held in the United States, as well as an opportunity of visiting some of the greatest fruit producing sections in the entire Northwest."

ROCHESTER, N. Y. - Nurseryman here are deeply interested in Representative Clark's bill, introduced in the House of Representatives May 12, providing for letters patent to the originator of a horticultural novelty. While the lack of protection for the originator of horticultural novelties often has resulted in a seeming injustice, it has heretofore been considered impracticable to provide for the patenting of a product of the soil. The Clark bill provides that under certain conditions, the originator of any new variety of plant, tree or vine may obtain a patent.
DAYTON, O. At the last meeting of the Florists' Club was considered a proposition to enter the proposed federation of improvement associations and welfare leagues of the City. The subject was introduced by Mrs. J. E. Young.
RICE LAKE, WIS. K. J. North, manager of the Columbia Nursery Company, Fall River, Wis., was found dead here, Tuesday, May 26. The coroner's jury declared death to be due to natural causes.
Carnation growers who have a surplus of young plants should advertise them in THE FLORISTS EXCHANGE.

JOTTINGS FOR FLORISTS

BY EDWIN LONSDALE

Dates To show how necessary it is to keep "tally" about things in general about floriculture and horticulture I herewith append time of flowering outdoors, under natural conditions, for this and the past two years in Girard College grounds of that very satisfactory columbine *Aquilegia chrysantha*; to wit: "In flower 1906, May 8, 1907, June 1; 1908, May 20. All this I found on the label indicating the name, etc.

Spider-Web Houseleek This interesting succulent which, scientifically carries the long name of *Sempervivum arachnoideum*, has met with ready sale during the past season in Philadelphia. William K. Ritter is responsible for its being obtained in sufficient numbers to make it worth while to the retailers. He had the little plants in his greenhouse at 825 North Twenty-eighth street, and he saw the little pots in the exhibit of the Whilldin Pottery Company at the convention of the S. A. F., held in this city August last; his natural intelligence did the rest. Mr. Ritter also has a dwarf form of *Sempervivum californicum*; or has he succeeded in causing it to assume a dwarf habit by his preconceived system of cultivation? In his collection of succulents, among many others was also a dwarf form of *sempervivum* similar to *S. californicum* but quite distinct therefrom; the leaves are more inclined to droop in the "unknown" than they are in the *S. californicum* and the points of the leaves are of a more decided character in the latter than they are in the former. What is it? Mr. Ritter's collection of succulents is indeed very interesting. H. H. Battles, at his Century Flower shop, and Robert Kift handled many of the "spider-web houseleek" and could have sold more than yore to be had. Here is a case where, in these dull times, the demand exceeded the supply. In other words, more could have been sold at retail than were to be obtained and the wholesale price was, in one-inch pots, \$5 per hundred. Mr. Ritter states that in order to have the plants retain that desirable cobwebby appearance they must be grown in the full sunlight.

The American Beauty Situation When among the growers of the American Beauty rose at Wyndmoor a few days ago, the future of this grand old rose was to some extent discussed. Everybody interested that I came in contact with, however, was in no way apparently disturbed. John Burton, the pioneer American Beauty grower in this favored locality, says that he will grow practically the same number the coming season as he has been doing for some years past. He has taken down two old greenhouses and is rebuilding in one house, with material furnished by the King Construction Company. The new house when completed will be 150 feet long and 42 feet wide. This will be planted with American Beauty. Mr. Burton has never confined himself to the cultivation of American Beauty alone. He has in addition Bride, Bridesmaid, Killarney, Mme. Abel Chateau, Richmond, Liberty and some few others, as his patrons require him to grow the varieties that are to be found generally in the trade.

Alfred Burton, whose property adjoins that of his father, will grow the same number of American Beauty he has been growing for the present season at least. The only change Alfred will make will be to throw out Richmond and plant Liberty in its stead, thus adding to the number of the latter variety he now has growing. Alfred has had very satisfactory results with Liberty. The process of pruning he puts Liberty through is to tie the old and long branches down instead of reducing the growth by cutting same away. The method induces the plant to throw on suckers or base

growths which they do from three to five and sometimes more and this action he so times in the doing that he has a crop of fine long stemmed flowers just in time for Christmas, and of course, at intervals all through the season. He has tried and discarded Kate Moulton, Alice Roosevelt, Mrs. Potter Palmer, Red Chateau he still holds on to. The S. S. Pennock-Meehan Company sells all that Alfred grows.

George Burton is located on Queen street, a good stone's throw from his father's place, and with the exception of one house of Golden Gate he has no other variety than American Beauty, and no change for the present is contemplated. George has one range of American Beauty planted already for early work. These have been planted for two months or more and are getting along nicely. Owing to the season of the year when the replanting had to be done, that is to say, when it was a difficult matter to have new soil in the right condition for use without having it under cover—he planted in the same soil the old plants had been taken from. By the method pursued, however, to make the soil in what was considered the proper condition, half an inch of wood ashes was scattered on the soil while the old plants were still growing therein. The effect on the old plants was that the new growth produced under the conditions assumed those rich red tints so dear to the heart of the grower. Later bone meal was used freely, and whatever the treatment, it seems to agree thoroughly with the plants. George disposes of his product through the commission house of Leo Niessen Company. He is quite enthusiastic about the new vitrified bench and he now has on the way to Wyndmoor a carload of that material. It is coming from the Camp Conduit Company, Akron, O. He expects to file-bench one of his houses complete and, according to his judgment it is the best thing in sight for a permanent durable bench. When looking at the illustrations the "legs" or supports seem somewhat larger and unhandy, but that may prove to be when seen erected more apparent than real. No doubt the results in this house will be watched with great interest by all who are conducting rose growing on permanent tables.

In Messrs. Myers & Samtman's operations in American Beauty they will have possibly the smaller number of 1,500 plants of this rose this year than last. This state of affairs has been brought about through the firm's desire to still further test the capabilities of their new h. t. rose Wyndmoor, with which they expect to plant two houses; and they will also try John Cook's My Maryland, and E. G. Hill Company's Rhea Reid. These will be very interesting experiments, to try the two last named novelties from widely different parts of the country, in the same soil and under the same intelligent treatment that has wrought such great success with American Beauty and Wyndmoor, not that they have lost faith in American Beauty because the senior partner, F. P. Myers, said, "If I was a younger man I would plan to have an establishment large enough to accommodate one hundred and fifty thousand American Beauty plants." Judging from their successful experience he is quite justified in his enthusiasm. The total cut of American Beauty for last week was 11,529; out of that number were 1,995 specials, \$10 of which were sold on May 31. They do not find any diminishing demand for their American Beauty, so says Mr. Myers.

I was naturally interested in this firm's new h. t. Wyndmoor. Their cut of this rose, during the last Christmas holidays, was 6,600, many of which were used at one of the functions held in honor of Miss Mary Drexel Paul, daughter of Mr. James W. Paul, President of the Pennsylvania Horticultural Society. In looking through their records I found that in March last 1,831 buds were cut. In April 5,175 and in the rapidly passing

Verschaaffeltii, Golden Queen, Fire Brand, Lord Palmerston, Queen Victoria, Beckwith's Gem. Prices of Routed Cuttings by express, 60c. per 100; \$5.00 per 1000. Less than 250 of a variety will be charged at the 100 rate.

A. N. PIERSON, - CROMWELL, CONN.

month 9,589 were cut. Martin Samtman, the junior partner, says he is confident that in the month of June the number to be cut will be increased. In looking through the house where the Wyndmoor is growing the prospects are excellent for continuing the prolific cut. They are a thrifty looking lot of plants, and they show the results of their breeding; the American Beauty characteristics, one of its parents, are distinctly seen. So far as I know there is no other rose whose pedigree is known that can claim any American Beauty blood in its veins.

Golden Bedder, Hero, Meesey, Pearl of Orange, 75c. per 100, \$6.00 per 1000. Less than 250 of a variety will be charged at the 100 rate. Fancy Varieties. A very fine assortment of twelve kinds not listed above; 75c. per 100, \$5.00 per 1000. 250 in assortment, our selection, at the 1000 rate.

C. LAWITZEN, BOX 261, RHINEBECK, N. Y.

(99) **Transplanting Outdoor Lily of the Valley.** I have a customer who wants to transplant lily of the valley. Will you kindly tell me the best time to do this, whether after the plants have bloomed or early in the season, and what is the best soil for them. This is for outdoor planting. J. Y. Penn.

—We have always found in transplanting lily of the valley that the best results came from doing the work when it was seen that the foliage had become fully ripened and was beginning to decay, and would advise to do the transplanting at that time. A good, rich soil that is well drained is most suitable, and if it is thought that the soil is not sufficiently enriched, it would be a good idea to dig in a good dressing of well decayed manure any time before the transplanting is done.

(100) **To Eradicate Thrips.** I have used tobakine liquid, also nicotine liquid, to eradicate thrips in my greenhouses, with some good results; but could you tell me if there is some better way to destroy this pest, or if there are more efficient drugs on the market? I used these liquids with an air pump. Va. D. B.

—Any of the tobacco insecticides are good for destroying thrips. While fumigation with hydrocyanic acid gas is resorted to sometimes when the pest becomes numerous, there is no need of going to this extreme remedy if tobacco insecticides are used with judgment. We think that spraying insecticides with an air pump is as good a method as can be employed, and we cannot suggest anything that will be an improvement.

(101) **A Troublesome Fly.** I have a lot of trouble with a certain kind of fly, very much like black fly, but with two long horns and a little larger than the fly. It jumps when approached, and its ravages are soon noticed by multitudes of white spots on leaves of every sort. There is another fly, jumping like the former, but rather green and with black legs and horns. I presume it is the female mate of the former. In Europe we call them puceons; what kind (lanigère or other) I don't know. Do you know of some way to destroy them? Va. D. B.

—Just what kind of fly is referred to we cannot tell. Perhaps it would be a good idea to send specimens of the flies to the Department of Agriculture, Bureau of Entomology, Washington, D. C., who will inform you of the name of the insects and the best means of destroying them.

(102) **The Ceanothus.** Is the ceanothus a hardy shrub or a greenhouse plant, and how can I treat it? A. L. New York.

Some of the varieties of ceanothus are hardy deciduous shrubs, some are greenhouse evergreens and others are stove evergreens. Tell us what variety you have and we will, if possible, give directions for its culture.

NEPHROLEPIS

WHITMANI, 2 1/2 in. \$5.00 per 100; 3 1/2 in. \$25.00 per 100.

FERNS, Boston, 2 1/2 to \$3.00 per 100.

Stock You Need Now

COLEUS, from 2 1/2 in. pots. Golden Queen and Crimson Verschaffeltii, about 20,000 of each. We have also 25,000 plants of eight other good varieties. Price: \$2.50 per 100; \$22.50 per 1,000.

SALVIA, BONFIRE and SPLENDENS, from 2 1/2 in. pots, \$30.00 per 1,000.

EGG PLANTS, 1,000 very fine pot-grown stock, \$30.00 per 1,000.

DRACAENA GRACILIS, in 3 in. pots, \$10.00 per 100.

HELIOTROPE, from 2 1/2 in. pots, \$3.00 per 100.

ENGLISH IVY, fine plants in 6 in. pots, 35c. and 50c. each.

ARALIA ELEGANTISSIMA, fine plants, about 2 feet high, \$1.00 each.

BABY RAMBLER ROSES, fine bushy plants, in bud and bloom, 6 in. pots, 50c. each.

Large specimen plants of NEPHROLEPIS SCOTTI, in pots and tubs, at \$1.00, \$5.00 and \$6.00 each. They are a bargain.

THE NATIONAL FLOWER SHOW, under the auspices
of the S. A. F. O. H., will be held at Chicago, Novem-
ber 6 to 15, 1908. William F. Kasting, Buffalo, N. Y.,
is chairman of the show committee.

AMERICAN PEONY SOCIETY.—It has been found neces-
sary to change the dates of the meeting of the American
Peony Society to one day later, making them June 19
and 20. A. H. FEWKES, Secretary.

SEED OF ERYTHEA EDULIS.—I send you several seeds
of *Erythraea edulis*, the pulp of which is highly nutritious.
They require several months time for germination. It
is the most desirable of the fan-leaved section of Palma-
ceae grown here, stands drouth, frost, and brilliant sun-
light without discoloring of the foliage, which is much
larger than that of the *Washingtonia*, and remains
green for years. P. D. BARNHART,
Cal.

—The seeds are almost round in shape, and about 1¼
inch in diameter. Surrounding the kernel is a very dark
colored flesh, somewhat resembling the prime of com-
merce, the skin being a shiny black also, similar to that
fruit. The flesh has a somewhat sweetish taste and, as
the name implies, is edible.

Two-Cent Postage with Great Britain.

Postmaster General Meyer has announced that an
agreement has been reached with the British Govern-
ment providing for a letter postage of 2 cents an ounce
between the United States and Great Britain and Ire-
land, to become operative October 1, 1908.

The William Scott Monument Fund.

There seems to be considerable enthusiasm manifested
throughout the country in the suggestion of our corre-
spondent "S." in last week's issue, that the numerous
florist friends of the late William Scott should contrib-
ute their mites toward the erection of a monument to
his memory.

The Florists' Exchange will be willing to receive sub-
scriptions for this very laudable movement, and to pub-
lish in its columns the names of the subscribers, to-
gether with the amount of their donations.

The Cut Flower Commission Business and Its Contingencies.

Elsewhere in this week's issue we present a carefully
prepared and thoughtful paper by Arthur A. Niessen of
the Leo Niessen Company, wholesale florists, Philadel-
phia, Pa., on the subject of "Co-operation Between the
Wholesaler and Retailer in Times of Over-production,"
read by the author before the Philadelphia Florists'
Club on Tuesday evening last.

The theme is a most important one, and Mr. Niessen's
remarks should be read carefully, and often, by those
most directly interested. Mr. Niessen believes, and we
coincide with him, that not only in times of gluts should
co-operation between the retailer and the wholesale
dealer exist, but at all times and on all occasions. This
is essential for best results, and, as far as we see, no
good reason is apparent why the most cordial relations
and the heartiest co-operation between the two classes
of merchants named should not be always in evidence.

The wholesale cut flower commission business has
assumed astonishing proportions in this country—a fact
which at once testifies to the imperative need of it, its
usefulness and value, and the excellent service it renders.
Exactness in the extreme in its requirements, it has
drawn to it a class of men whose business capabilities
are unsurpassed by those of the men engaged in any
other branch of horticultural endeavor. The conditions
confronting it, even in the smoothest of times, are of the
most trying nature, and in periods of excessive supply
almost beyond human solution. That being so, to regard
the wholesale commission florist as being merely a "ne-
cessary evil," or to fasten upon him any other oppro-
brious cognomen is to display an unardonable ignorance
of his own true worth, and of the invaluable work he is
doing and is called upon to perform.

One point in Mr. Niessen's paper which is worthy of
the best consideration is his estimate of the value or
otherwise of the "street fakir," as that industrious in-
dividual is erroneously termed. We have no patience
with the narrow-mindedness that stigmatizes the street
merchant as a nuisance, a menace to legitimate busi-
ness and such like, while at the same time failing to
mention a substitute that will take his place as effective-
ly and efficiently. It must long ago have been clear to
every thinking retailer that his own branch of the busi-
ness cannot begin to consume the quantity of cut flow-
ers produced for any of the large markets of the country
—minus those shipped to points distant from these
markets; and it is most unreasonable, not to say selfish,
to suppose, far less iterate, that for the especial ben-
efit of the retail trade all surpluses after daily retail
purchases, should be destroyed, while there is open a chan-
nel, equally legitimate, whereby these surpluses can be
considerably curtailed or entirely removed.

That the operations of the street flower merchant
mitigate to any appreciable extent against the regular
retail trade, we do not believe; that they relieve con-
gested cut flower conditions when these exist, and fur-
nish an outlet for large quantities of stock in normal
times, we are confident of; and the natural conclusion
is, that toward the development of the cut flower in-
dustry they exercise an influence that is most beneficial,
and, without which, there would be a decided loss; for
no good argument has been adduced, that their complete
extermination would mean larger purchases or increased
sales by those who occupy stores, and who regard them-
selves only as pursuing legitimate means in disposing of
stock to the final customer. On the other hand, Mr.
Niessen points out that sales of the character of those
engaged in by the street merchant are ordinarily looked
upon as a "nuisance" by the regular retailer, and touches
upon other practices that are not calculated to increase
the retail demand for cut flowers by the public, but to
curtail it, rather.

The status of the street merchant and that of the
store man in any line of business, cannot, and should
not, be regarded as similar. If the prices asked and ob-
tained by the former are smaller, so also are his profits;
and, so far as our knowledge goes, there is no discrimina-
tion in favor of the street peddler in the matter of
purchases at wholesale. When it comes to loss on his stock,
the peddler is decidedly at a disadvantage, possessing
none of the facilities for preserving same enjoyed by
those to whom he is reputed to be a business rival.

As we view the matter, the retail florist is in a far
more enviable position to-day than he was prior to the
advent of either the wholesale commission dealer or the
"street fakir." On the one hand, his sources of supply
are ever at command, and that most handily, reducing
his waste to a minimum; while, on the other, the com-
petition he imagines he undergoes in the form of the
"fakir," and which he regards as unjust and unfair, even
illegal, were it removed, would prove of no material
benefit to him, because his own business methods pre-
vent such a satisfying outcome.

In the meantime, and until matters can be adjusted
to suit him, we would again refer the retailer to the

advice given by Mr. Niessen who points out methods
not now in general operation, whereby the store man
could benefit himself and help greatly to improve condi-
tions for which he himself is far from being not wholly
responsible. It would be well for him, too, to consider
the whole situation from every side, and not merely
from that viewpoint which looks to self-aggrandisement
and begets a narrowness of conception anything but
praise-worthy.

The Rose Show at New York.

As previously announced, the rose show to be held in
the New York Botanical Garden, Bronx Park, under
the joint auspices of the American Rose Society and
the Horticultural Society of New York, will take place
next week—Wednesday and Thursday, June 10 and 11.
A copy of the schedule of premiums appears in an ad-
vertisement elsewhere in this issue. Some \$250 are of-
fered as cash prizes, and F. R. Pierson, Tarrytown,
N. Y., offers a \$25 silver cup to be awarded to the ex-
hibitor whose combined exhibits in any and all classes
are regarded by the judges as being the most instructive
and comprehensive. The American Rose Society offers
its gold, silver, and bronze medals and certificates for
new roses. The object of the promoters is to have on
display representations of all the groups of roses, and ex-
hibitors are earnestly requested to assist toward that end.

A June show of roses has long been regarded as one
of the essential features of the work of the American
Rose Society, looking to the information and instruc-
tion of the public relative to roses adapted to outdoor
purposes. The Horticultural Society of New York has
made such an exhibition possible this year, and the trade
and the private gardeners should show their apprecia-
tion of this commendable endeavor by making such a
display as will be completely representative of the out-
door rose cult in America.

In connection with the exhibition appropriate addresses
will be delivered by William C. Barry, Rochester, N. Y.,
and Secretary Leonard Barron of the Horticultural
Society.

Shade Tree Commissions.

Throughout New Jersey these very serviceable bodies
are in operation, and have accomplished a great deal of
good. The citizens of Trenton are the latest to ask for
the appointment of such a commission. The law giving
authority for the establishment of Shade Tree Com-
missions in that State was enacted in 1893. The act was
drawn up by Fred'k W. Kelsey, the well-known nursery-
man, and is very simple in its provisions. Any govern-
ing board of a city, town or borough in New Jersey
may, by resolution or ordinance, declare the law opera-
tive, and the mayor or president (in townships or bor-
oughs) is then authorized to appoint a commission of
three, which commission has substantially similar con-
trol of street tree planting, pruning, and care of trees,
and the right to assess the cost of the trees, tree guards,
etc., on the abutting property, to that which the munic-
ipality has over street openings, etc.

The value of such a commission operating in every
city, town, or borough, provided the commission is com-
posed of men who understand all about trees and their
care, is very apparent; and the example set by the State
of New Jersey in this respect is worthy of emulation
throughout the whole country.

BOOKS RECEIVED.

THE ROMANCE OF THE REAPER. By Herbert N. Casson.
Publishers, Doubleday, Page & Company, New York.
Price, \$1.

This is a most interesting volume, giving as it does the
history of the growth of one of the greatest American
businesses, which has spread all over the world—that of
the manufacture of the reaping machine. Mr. Casson
has collected a wonderful amount of information rela-
tive to this, the greatest labor-saving device ever invented,
so far as agricultural development is concerned, and he
has presented it in such readable form that the volume
at once becomes one of absorbing interest. The contents
include chapters on The Story of McCormick, The Story
of Deering, The International Harvester Company, The
American Harvester Abroad, The Harvester and The
American Farmer. The book contains numerous por-
traits of the men associated with the origin and develop-
ment of the reaper industry and other illustrations—
26 in all—taken from photographs.

There is not a man or woman in any way associated
with the agricultural interests who will not be delighted
and instructed by a perusal of this fascinating volume.

Over in England they are agitating a color chart
for sweet peas. The greatest drawback in the pro-
duction of such a chart seems to be the cost.

American Carnation Society.

Varieties Registered.

BY WA-NO-KA GREENHOUSES, BARNEVELD, N. Y.

APPLE BLOSSOM—Parentage, Enchantress on white seedling; color, white delicately blended pink; size of flower, average 3¼ inches through season; habit, rapid upright grower, all growth coming from the base, good producer and good keeper on long stiff stems.

BY A. E. BOYCE, WELLSVILLE, N. Y.

CLARIBEL WORTH, parentage, Estelle and General Maceo; color scarlet crimson, very rich; size of flower average 3¼ inches. At its best about Christmas. Good stems, none bursting calyx, foliage rich blue resistant to disease and insects.

ALBERT M. HERR,
Secretary.

Partial View of Greenhouse Plant of R. Vincent, Jr. & Sons Company, White Marsh, Md.

OUR READERS' VIEWS

To Prevent a Rash Act.

Editor Florists' Exchange:

It grieves me to learn from one of your Chicago correspondents that two of the New York commission men on Twenty-eighth street have come to the melancholy conclusion that their sphere of usefulness on this subliminary is over, and have therefore decided to shuffle off this mortal coil, and "join the great majority"; and this, too, in the merry month of June! This is sad news to me, seeing I take great interest, both in the commission men and the commission district. A more genial set of men would be hard to find, and the loss of two of them at one and the same time will be hard to bear. Their names are not given; if they had been, I should consider it my duty to personally remonstrate with them. As it is, all I can do is to give them some advice through the medium of The Florists' Exchange.

The reason given for committing the rash act is that they are "old bachelors." If they have not done the "act" before this letter is published, I would advise them to wait at least until the Florists' Club outing on July 1. Many nice young ladies attend that always pleasant affair every year, and the mere fact that those "old bachelors" are commission men might not stand in the way of their being accepted by some of them. I guess there are worse people than the commission men, if we only knew where to find them. Perhaps Jenima could be prevailed upon to come to the rescue of one of those downhearted commission men; of course, she could not be expected to take them both. She must now be just in the prime of life (46 ten years ago), and could be relied upon to take at least a motherly interest in the commission man of her choice; anyway, it would be better than joining the "great majority," even although it is the expressed opinion of that scribe that "it is high time" they did so. However, if they have irrevocably decided to "join the great majority" I hope they will choose a pleasant route, and would suggest that they take that correspondent for the Chicago paper with them, just to make sure of a warm reception.

JOHN BURNIE.

The Late William Scott.

Editor Florists' Exchange:

"Surely William Scott deserves some recognition and gratitude," says S. Indeed, surely. His gracious help to all, his advice and good will, which was universal, not bounded by class or position, nor even by oceans or continents, merits a fitting remembrance of a life largely devoted to horticulture and horticulturists. Which of the leaders will lead?
J. H.
Mass.

R. Vincent, Jr., & Sons Company, White Marsh, Md.

Situated some twelve miles north of Baltimore in a rolling, well-wooded, picturesque district, nestles the establishment of this progressive firm of plant growers. All is activity there, a veritable beehive of busy workers. A visit to this plant will be found replete with pleasure and profit. Courtesy and kindness, in a marked degree, seem firmly rooted in the representatives of this firm; so the writer found on a recent visit. A cordial welcome, I feel sure, will be extended all visitors.

Over two hundred acres of land are under direct cultivation. A rich, retentive soil it is, and admirably adapted to the various purposes to which it is applied. Here are grown for the wholesale markets such vegetable plants as cabbage, celery, tomatoes and lettuce in all the leading varieties; by the millions they are grown.

A large tract of ground is devoted to dahlias. The culture of dahlias is one of the firm's specialties, and it is recognized as one of the leading houses for dahlias in this country.

Located approximately in the center of the property is the extensive greenhouse plant. Some twenty-five or thirty houses radiate from a large packing house. All houses, sheds and cellars are furnished with electric light generated on the place. Furman boilers of great magnitude supply most of the necessary artificial heat.

Geraniums form the firm's chief specialty, and it is to their cultivation that greenhouses covering nearly two and a half acres are devoted. The Vincents are among, if not the foremost house for these plants in America. It would seem that the energies of this progressive concern have been directed toward gathering together all the best standard varieties and novelties from the leading geranium houses in Europe, America, and other quarters of the globe; therefore, the firm stands in a position ready to suit the most fastidious in taste. Annually a special geranium catalogue is issued by the firm, which is beautifully gotten up and which certainly pays a high tribute to the concern's progressiveness.

Mr. Vincent informs me that they have at least 120,000 square feet in geranium culture under glass and that they now propagate annually over two million plants from their different varieties. Therefore they are ready to meet all orders. At this season their houses of stock plants, being in full bloom, present a most gorgeous picture of coloring. Richard A. Vincent, eldest son of the present head of the firm, is an experienced man in matters pertaining to geraniums. Talking with him recently about geraniums, Mr. Vincent expressed the opinion that the Bruant type, to him, appeared the most ideal; from

this French firm have emanated such grand well-known standard varieties as *Beaute Poitevine*, *Jean Viaud* and *Alphonse Ricard*. Camell's English varieties are remarkable and conspicuous for their vivid, dazzling colors. Grand subjects are these geraniums for greenhouse and conservatory work. *Boucharlat's* and *Lemoine's* varieties still maintain their reputation for high quality. The Vincent firm has purchased over a hundred different novelties of 1908 from the above mentioned sources and R. Vincent, Jr., who has just returned from a trip to Europe, is still adding other new varieties to the already extensive collection.

Mr. Vincent says that their five leading bedding sorts for 1909 will be *Colonel Thomas*, a violet crimson, with large trusses; *Mrs. Lawrence*, a beautiful satiny salmon; *Jean Oberle*, a white with rosy eye; *M. Anatole Rosclair*, rose pink with white eye; and *Paul Crumpel*, a scarlet, which promises to be the leader in its color. It is possessed of a strong, vigorous constitution and is a profuse bloomer with flower and truss of very large size. *Mme. Recanier* is considered here the leader among whites; it is a semi-double with very large trusses, also a good grower, of vigorous constitution.

This firm is working up a large stock of variegated leaved sorts; already they have over sixteen varieties of such, and of sweet-scented leaved kinds at least twenty varieties.

Of pelargoniums a very large stock is also carried. A wide range of colors is now obtainable in this class. They make most attractive pot plants and are splendidly adapted for Easter trade. Purity still holds good as a white in this class.

At this time the exhibit of geraniums at White Marsh presents a picture of dazzling beauty. Gorgeous colors are there and many new varieties that all interested ought to become acquainted with.
J. F. J.

George F. Chandler.

Early in the morning of Memorial Day passed away perhaps the oldest florist and nurseryman in Massachusetts in point of years and experience in his calling. For 65 years Mr. Chandler conducted, first a nursery, and later added to it that of a florist business, the commencement being in 1843. For the past two years his health had failed, but up to a-most the last he was interested in all that was being done, his intellect remaining bright; and it was pleasant to hear him when in a reminiscent mood tell of the many and varied experiences of his 86 years.

The one surviving son, F. Lincoln Chandler, will continue the business as heretofore, he having been associated with his father since 1887, and of recent years having charge.

Thus passes to his rest and reward one who has done good work in his long life, who planted trees in the beginning because he loved to see things grow and lived to see the streets of the town beautiful and famous through his handiwork. Few of us attain to this, and none deserved more than George F. Chandler the title that he was truly "one of nature's noblemen."

So, Lancaster, Mass. E. O. ORPHEE.

Greenhouses of R. Vincent, Jr. & Sons Company, White Marsh, Md.

THE FLORISTS' EXCHANGE

Co-Operation Between Wholesaler and Retailer.

Paper Read by Arthur A. Niessen of the Leo Niessen Company, before Philadelphia Florists' Club, Tuesday Evening, June 2, 1908.

The title of this paper is "Co-operation between Wholesaler and Retailer in Times of Over-production." Why there have been added to the title the words "in Times of Over-production," is more than I can understand. If we cannot work hand in hand when the market is about evenly balanced between supply and demand, we certainly cannot expect to do so when the commission man is at the mercy of the retailer. We always have had, and will have at certain times of the season, a glut of some sort. This does not apply to our trade only, but to every other line as well. In our line it is due to unavoidable over-production; in other lines it is probably due to an over-estimated demand. I would like to ask the retailers present, "Are you doing anything, or are you making any effort whatever to relieve the market of its over-production?" Beyond finding fault with the manner in which the commission man is trying to meet this serious problem, the majority are doing nothing.

Relieving the Surplus.

How to find a market for this over-production is a problem worthy of a genius. It has been our experience that, although we offer flowers to the retailer at what would seem ridiculously low prices, he will not buy any more than he positively needs. The thought how they could handle this stock, and in some way increase sales, never enters the minds of the majority of them. I am quite sure, if the retailer were situated the same as the commission man during a glut, that if he had to take the stock regardless of having an immediate outlet for it, he would find ways and means to make it profitable for him to handle it. Necessity is the mother of invention, and it is wonderful what we can do when we must.

Co-Operation a Help.

It is very evident that to a certain degree the conditions of the market during a glut could be improved upon by co-operation, but in that direction progress seems extremely slow. The feeling entertained toward the commission man by many of the retailers is decidedly antagonistic. It is indeed surprising that, by many retailers the commission man is considered a necessary evil, whose sole reason for existence is to oppress the retailer by extorting exorbitant prices, and imposing all

Wittbold Watering Device—Spraying a Center Bench from a Side Pipe Line.

sorts of hardships. These retailers will without hesitation make the statement that they will favor the grower who peddled his stock every time. The commission man is called upon only during a scarcity to furnish that which the grower could not possibly supply. Coming to the commission man under such conditions, and being asked a fair price for the goods wanted, the retailer as such the commission man for the seemingly unjust treatment, and classifies him with the pirates and daylight robbers. Just as soon as we can overcome the feeling of the retailer, as described above, toward the commission man, we are one point closer to co-operation.

The Position of the Street Peddler.

We cannot dispose of our surplus to the five and ten cent stores, there is only one outlet left to us, and that is to put the flowers on the street. The street peddler by most retailers is looked upon as a demoralizer of the flower business. The commission man is solely blamed for his existence, but, let me tell you, that in the case of many of the growers who peddle their own stock their last stopping place is the curb, and they will take anything to relieve the load on their arm and will sell their wares at a price so low that the buyer is pledged to secrecy, they are ashamed to have the price known. Can you imagine what conditions would be if the growers were depending entirely on their own efforts to dispose of their products? Some of the peddlers undoubtedly have what may be termed "nerve." They will buy five thousand carnations that are almost asleep, carry them to the sunny side of Market street, in a temperature of about 90, and take what they call a chance. How many retailers, at the same price, would take the same chances? I do not wish to be misunderstood that I am here to speak for the street sellers. There is not a commission man who would not gladly dispense with them if there were any possible way of doing so. With few exceptions, they are not a desirable lot.

When the retail dealers see the street fairly flooded with flowers they should always bear in mind the fact that the commission man has offered the stock to them first, that he has exhausted all the known science of salesmanship to induce them to buy it. Many retailers will advance the argument that if there were no flowers on the street they could sell double the stock they are now selling. That is the very thing they should do, buy it and keep it off the street. "Give us the same chances you give the street fakir," is another time worn saying. Let any of the retailers try it, and the results will startle them. Let them start out some morning and ask the commission man, "What will you take for the shell?" and if you mean business the shell is yours. The tendency today is just in the opposite direction. Many of the retail stores may justly be called sample stores. They do not carry any stock, the commission man is carrying it for them. The demands are sometimes startling. Ten minutes after the goods are ordered they are supposed to be delivered. The excellent service brought about by free competition is sadly misused. In that direction co-operation would do much to overcome existing unpleasant conditions.

Relationship of Grower and Commission Man.

The commission man has, after years of persistent effort, gained the confidence of the growers. They are working hand in hand, the grower will consult the commission man about his crops for a coming season, he seeks his advice, and the trade has benefited greatly by this "mutual interest" feeling existing between the grower and commission man. That feeling does not prevail between the retailer and the commission man to the extent that it should.

The Question of Prices.

There is one feature which, in my estimation, curtails the sale of flowers, and that is, many of the retailers do not keep their prices consistent with the prevailing wholesale values. American Beauty bought at \$1.50 per dozen are sold at three and four times the purchase price. For illustration I will cite an instance of a grower who entered a retail store and priced his own mignonette on sale there; he was informed \$3 per dozen was the price. He then wondered why he was getting only \$6 per hundred for it.

To overcome a glut the retailers should aim to make large sales and small profits, instead of small sales and large profits. The ultimate results would be the same as far as profit is concerned, although a larger quantity of flowers would reach the consumer. There is a too vast difference in the price of flowers from the grower to the public. We should aim to reduce the cost of handling the stock from the time it leaves the greenhouses until it reaches the public. It seems some of the retail stores located on the main thoroughfares could dispose of large quantities of flowers by offering them at a reduced price. This they could do by eliminating all such expenses as deliveries of sales less than a certain amount, and by doing a cash business. This need not apply to all their trade, only to special sales, which may be called "bargain" for a certain day or time. The advertisement of bargains by the department stores is almost infallible bait to the public.

A department store in a small town was selling carnations at twenty-five cents per dozen on Friday and Saturday. A retailer in the same town thought of meeting this price, and bought several thousand carnations to be put on sale the same days the department store was offering its. The retailer did this not expecting to make a profit on the sales, but principally to meet the price of the department store. Making inquiry, he was offered carnations at \$10 per thousand and he felt that he was being favored, but, to put it more correctly, he was doing the commission man a great favor in buying the carnations. Selling them at twenty-five cents per dozen, he disposed of as many as five thousand on a Saturday. It is needless to say that beyond his expectation it turned out to be a very profitable business for him. There are ways and means of selling large quantities of flowers, and surely our retailers are energetic and enterprising enough to find them without having some one in another line of business show them how.

Ninety per cent. of the public are lovers of flowers, and sixty per cent. do not buy them because their means will not allow it. Why not, during a glut when flowers are cheap and plentiful, cater to the great masses, and give them all an opportunity to enjoy the beauties of nature? That would cultivate a public taste for flowers. Many prospective buyers hesitate to enter a retail store, because they have only a small sum to spend. It is indeed a fact, that by some retailers the twenty-five cent customer is considered a nuisance. That is a very sad mistake.

Many retailers hesitate to reduce the prices of flowers for fear they could not get a better price when the glut is over. They claim that their customers cannot understand why the prices of flowers should vary. I am sure we all know why the price of strawberries varies, and we know it is simply because the public has been educated along those lines. Not many of us can afford strawberries in January, but there is a time of the year when we can buy them, no matter how humble our circumstances may be. The same can be said of flowers; during a glut sell them at a price so that they may find their way into every home. But don't let the street fakir do it for you.

Wittbold Watering Device in Operation Upon a Side Bench.

Advertising and Special Sales.

Another feature which is good for the business is to run special sales. There is hardly a time in the year when some stock is not more plentiful than others, and can be bought cheap. Advertise. How many florists do it? Some of the small local papers would be a good advertising medium in certain sections. A "special sale" will bring the crowd; the people will get into the habit of frequenting your store; you are advertising your business. In my estimation, the flower business today has reached such large proportions that the advancement of the trade can only be accomplished by catering to the great masses, and not so much to the few.

What Co-Operation Means.

Co-operation properly applied is indeed a fine thing; in fact, it is only practical when both or all parties concerned derive a benefit from their combined efforts. The definition of the word "co-operation," according to Webster, is "to operate jointly to the same end." The end in this case is mutual benefit, and without that there is no co-operation. Through co-operation is brought about a combined effort, which is much greater than the individual effort. Everyone concerned derives from such a combination not a share of its strength and benefits, but all its force and good. If in striving to advance our own position we aim to advance that of the trade as well, we have true co-operation.

A man who toils solely for his own personal gain, who must make every transaction pay, regardless of the means to arrive at that end, is a menace to the trade in general. If each one of us would do a little something to better existing conditions, and do it with the feeling that the advancement of our profession is depending on our own individual effort, prompted by an unselfish interest, we would soon arrive at a better understanding, which would reap its own reward.

exhibition, are ready and will be sent to all who apply to Secretary E. W. Neuland, Tarrytown, N. Y.

Subjects and exhibits for next meeting will be "Shrubs and Hardy Perennials." L. A. MARTIN

AMONG THE GROWERS

The George Wittbold Company.

A visit to the Buckingham place establishment of the George Wittbold Company, Chicago, is at all times both interesting and profitable. Louis Wittbold, who is well-known in florist circles, has an inventive genius for greenhouse accessories, and has originated several valuable time and money-saving appliances which have come widely into use. In cement bench construction he has been a pioneer, and the Wittbold system described recently in these columns, has, due to its simplicity, many followers. Another very important invention is the Wittbold watering system. This may be seen at the Wittbold establishment in operation under all ordinary conditions. It is adapted to any situation, in greenhouses or outdoors, the only requirement being an adequate water supply. The system is a combination of ordinary iron piping, Wittbold patent nozzles, with regulating and turning devices. Like the Wittbold cement bench system, the watering system may be installed for a very small outlay. Ordinary galvanized iron pipe is used, running the length of the greenhouses, and the cost of this is offset by the fact that the use of hose may be abandoned. Wittbold patent nozzles are inserted in the piping at intervals apart sufficient for the requirements of the installation, and to meet the

of watering being a complicated event, and, as desired, without turning on full force. Any florist can install a system, proceeding by pipe locally, and purchasing the Wittbold nozzle, and swivels which are all supplied with standard threads and fittings. Any blacksmith can tap the pipe on his drill press, which is really all the mechanical work required. Many florists have drill presses in their own establishments. One swivel wheel, 20 nozzles, and 100 feet of pipe will enable any one to make an inexpensive trial of the system before further equipping. The pipe can be obtained locally, and wheels and nozzles from E. H. Hunt, 56 Wabash avenue, Chicago, who is the general selling agent for all the Wittbold specialties.

When viewing the operation of the system in the Wittbold establishment it is easily seen that it is adaptable to the requirements of any house or stock, and it has an advantage over hand watering, in that being so easily worked, watering is never neglected, as is often the case where hand watering is depended upon. One man can water a whole range in an incredibly short space of time.

The system is just as applicable to outdoor use. Pipes outdoors may be 30 feet apart with a good pressure, each nozzle throwing a spray 15 feet on each side of a pipe. The cost of an outdoor system, per acre, is trifling in comparison with the saving in labor, and increased value of crops.

Another thing which attracts a visitor to the Wittbold establishment is the manner in which every foot of glass is made to yield its greatest possible maximum of service. The location of the plant is an expensive one, and with the growth of the city there is no opportunity for expansion. In several of the houses plants are brought along in

Showing Cement Wall in Course of Construction, and Arrangement for Sash. Tying Arrangement, Showing Galvanized Iron Trays. At George Wittbold Company's, Chicago.

There is only one way that a man can help his trade, and that is by having faith in it, and confidence in those engaged in the same line of business. It is a terrible thing when we get so that we had fault with everything and everybody. We all know of some men who do this. "There is not an honest man anywhere," they say. That is all wrong. Ours is a good profession to the man who is trying to better it. If we all put our shoulders to the wheel, lifting with all our might, there would be no time to see who else is lifting. It is all depending on individual effort to produce one great force. I would advocate co-operation not only during the time of an over production, but for every day in the year.

TARRYTOWN (N. Y.) HORTICULTURAL SOCIETY.

The regular monthly meeting of the society was held on Friday evening, May 29, 1908, President Angus in the chair. The following gentlemen were elected active members: Messrs. George Begg, John McGregor and Alexander Mark, and one application received.

For this meeting J. W. Lindsay had offered prizes for the best exhibits of cut flowers from shrubs and hardy herbaceous plants. Two fine lots were exhibited by John Woodcock, gardener to General McAlpin, Ossining, N. Y., and Alexander Maitland, gardener to Mr. Carroll Dunham, Irvington, N. Y., which won in the order named.

The annual June exhibition will be held in the Music Hall, Tarrytown, N. Y., afternoon and evening of June 12, 1908, and we hope that every member will try to make an exhibit of flowers or plants. Admission is free to all interested. Schedules for this, also the November

water pressure available, each nozzle covering a number of plants, or an ascertained area of bench, or the nozzles may be placed sufficiently near each other to allow of a nozzle to each plant, for individual watering or syringing. The pipes may be hung high or low for watering or syringing, near the roof, to spray from above like a soft rain, on the bench or near the ground to syringe the under side of foliage; or from the side of a bench to wet the soil only. In fact any and every condition of watering common to hand labor can be accomplished with this mechanical system. The nozzles throw a flat, fan-shaped sheet of water, which sheets, either of themselves, or when impinging upon each other, insure a soft, even distribution of water. The watering is in the absolute control of the operator. Each line of pipe is fitted with a swivel wheel which turns easily, and throws the water in any direction within its radius, which is a complete circle.

For use in rose houses there is a special nozzle provided for syringing, which throws a more concentrated stream of water in an upward direction, with body sufficient to dislodge red spider, or other insects, and easily regulated to suit operative conditions.

The amount of water the system will throw is limited only by the pressure available. With a fair to good pressure a nozzle of regular size will deliver an even thin sheet of water covering approximately 150 to 250 square feet. For average use the nozzles are placed about 5 feet apart, which allows

ties. These ties are made of a rack of piping with galvanized iron trays. This arrangement permits of light and air reaching the under ties or benches, and further presents the opportunity of quickly removing a tier when necessary, or as quickly putting it up again. An illustration of this method is here shown.

At the present time the rear wall of one of the greenhouse ranges is being replaced with a wall of cement, and here again Mr. Wittbold's inventive faculty asserts itself. A view herewith shows the construction. At first sight it would appear to be an ordinary board and mold wall construction, but close attention will show a boxed construction on the roof, which will be used in early Spring for carrying bedding and other stock, the roof proper receiving heat from the greenhouses, and the sub-structure carrying sash. It will also be noticed that the roof of the corridor between the wall and the glass proper is laid over the glass roof of the old construction, and forms part of the mold for the 2-inch concrete roof. Paper is laid over the glass sashes and the concrete poured to the mold thickness, the sash construction and the paper being easily removed after the cement has set. The pipe studs seen projecting from the wall are not part of a plan for reinforcement, but they are the ends of short pieces of pipe placed in the end of the section to make a good binder for the next section, the whole work being done piecemeal, section by section, as opportunity offers. J. H. PERKINS

FOR THE RETAILER

Bay Trees in a Wedding Decoration.

Bay trees were used exclusively for a prominent wedding this week, and proved a pleasing change from the conventional palm and fern decorations, which are difficult to get away from, the choice of material for backgrounds being somewhat limited. The chancel of the church for this occasion was completely cleared of all seats and other obstructions, so as to leave plenty of room for decoration, and a clear view from the body of the church. Two large pyramidal bay trees, 14 feet high, were placed to the left and right of the altar. Standard and pyramidal bay trees were arranged on either side of the chancel, in irregular formation, in much the same manner as they would be placed on the side of a bank for an Italian garden effect. Immediately in the foreground were standard and pyramidal boxus, carrying out the formal effect. In front of these was a border of pink hybrid rhododendrons, and peonies. Here and there among the bay trees were large bushes of *Viburnum opulus* (the common snowball). Along the front of the chancel was an arrangement of *Spiraea Van Houttei*, the effect being that of the growing plants, many of the graceful sprays falling in festoons almost to the floor of the church. A veritable cascade of the same flowers veiled the front of the pulpit, the lectern being treated in a similar manner. The altar rails were tastefully covered with the beautiful pink weigelia, which

Leaf Scorch of *Adiantum Farleyense*.

[Reproduced from 1907 Report of Conn. Agr. Station.]

is particularly useful for decorative effects. Two tall vases filled with the superb peony *Festiva maxima* (which is at its best just now), completed the decoration of the chancel.

Two rows of bay trees were placed on either side of the church, forming an avenue. The bay trees were on pedestals five feet in height, placed in the side aisles and immediately beneath the apex of the arches. The tubs and stands were covered with oak branches, while a mass of white peonies were arranged on the tubs, and allowed to fall in graceful clusters and sprays. On every alternate pew up the center aisle an arrangement of white peonies was fastened, with long sprays of *spiraea* falling in a shower, beneath a large bow of white ribbon.

The reception was held at the house, the bride and groom receiving in front of a large mirror. This was banked on either side with *Adiantum Farleyense*, with large sprays of *Cattleya gigas* introduced here and there. *Cattleya gigas* were also arranged to form an arch over the mirror. Another large mirror at the end of the room was done with lily of the valley, several long garlands of which, made very lightly, were suspended from the top of the mirror, hanging almost to the floor. This was caught up, at about the middle with a large bow of white satin ribbon and a cluster of *Cattleya gigas*, the effect being that of a beautiful lace curtain.

The dining room walls were almost entirely covered with fresh green oak branches, with clusters of white peonies appearing here and there among the foliage.

The decoration for the buffet table was a tall old-fashioned handle basket, filled with pale pink sweet peas, one of the flowers being allowed to fall out carelessly on to the table cloth.

Commencement Exercises.

These occasions are nearly over for the season. One of the most fashionable schools in New York City holds its exercises at Sherry's. It was my privilege to be present while the floral tributes were arriving, and I may truly say I have seldom seen such a wonderful display. Every florist in town was represented, from the humble basement man to the leaders. Bouquets were stacked three feet deep, waiting to be sorted, some graduates getting as many as a dozen. Baskets were also numerous; one filled with *Cattleya gigas* and lily of the valley was especially fine. The basket was of peculiar pattern, being high at the back and very low in front. The *Cattleyas* were arranged on one side, surrounded with *A. Farleyense*. To the left of the orchids lily of the valley formed a large spray, which was continued up and over the handle, with a large French bow of green radium silk ribbon. The small Spanish iris was seen in a number of the creations, and has proved one of the popular flowers of the season. D. RAYBUN.

Plant Diseases in Connecticut in 1907.

In the report of the Connecticut Agricultural Experiment Station for 1907, Dr. G. P. Clinton, Station Botanist, describes, among other things, diseases of some ornamental plants which have appeared in that State. We make the following extracts from the report:

LEAF SCORCH OF ADIANTUM FARLEYENSE.—The accompanying illustration gives a good idea of the appearance of this trouble of the *Farleyense* fern. It was first seen by the writer in the Fall of 1902, in a Connecticut greenhouse, where it was quite troublesome. Complaint was made of it again in January, 1907, by A. N. Pierson, a large grower of ferns at Cromwell, who sent specimens for examination. The trouble shows on the leaves as prominent, often wedge-shaped, reddish-brown areas that extend inward from the clefts of the pinnae. These spots give a variegated appearance to the plants, which produce a less luxuriant growth, but otherwise appear in a healthy condition. A careful microscopic examination of the roots, stems and leaves showed no indication of any bacterial or fungous parasite. There seemed to be no unfavorable conditions of the soil to produce the injury. It appeared on the whole to be a physiological trouble. So far as the writer could determine, it seemed to be a leaf scorch, not necessarily entirely due to hot rays of the sun, but to loss of moisture from the leaves under unfavorable conditions, such as too dry an atmosphere, sudden changes of air moisture, etc. A somewhat similar trouble has been seen occasionally in nature where ferns suffered from lack of moisture. The *Farleyense* fern is very delicate, and, because of its very thin leaf tissues, is much more sensitive than other cultivated ferns to unfavorable conditions. The fact that the trouble seems to start near the veins, and that under the microscope the stomates often show discoloration before the surrounding cells, indicate that it is a trouble connected with the inability to properly control transpiration of moisture. While no doubt it is a common trouble, and probably noted before in floral writings, the writer has seen no mention of it in the literature of plant diseases. Halsted (Ann. Rep. N. J. Exp. Sta. 14: 420. 1894) describes and figures a somewhat similar trouble caused by a definite fungus (*Phyllosticta Pteridis* Halst.), and briefl states that unfavorable environment also often causes ferns to die and turn brown at their tips. Concerning the *Farleyense* trouble, Mr. Pierson wrote: "I do not think it is due to sunburn or scald, because the disease, which we have always called rust, is hardly noticeable in the Summer time, but rather when the cold, damp weather comes on in the Winter; particularly is it so this year. These very same plants that look so badly, with hardly a perfect leaf on them, will, by cutting the old leaves away, throw up perfect leaves in the Spring, without a spot on them, and can be sold for decorative purposes." This last statement seems also to indicate that this trouble is a physiological rather than a parasitic one.

SWEET PEAS, DAMPENING OFF (*Pythium* sp., *Rhizoctonia* sp.) During last July, when sweet peas were about one-third to one-half grown, occasional vines showed evidence of trouble by turning yellowish, wilting, and finally drying up entirely. An examination of such plants showed that they were more or less separated from their roots near the surface of the ground by a reddish-brown rot. Microscopic examination of the injured tissues revealed the presence of one or the other of the above fungi, as the cause of injury. Although the trouble was quite common, usually enough plants escaped to make a fair stand. As manure encourages the growth of such fungi, it should be used

with care, especially at the surface of the ground. The cold, backward Spring was apparently largely responsible for the unusual amount of dampening off this year.

Other diseases described in the report are rust on *Campanula rapunculoides*; stem rot of *delphinium* sp.; *Funkia* sp.; *Pentstemon barbatus*; *Valeriana officinalis*; leaf spot of *Kalmia latifolia*; anthracnose on the meadowsweet; rust on roses; and leaf blight of *Tecoma radicans*.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

Albany, N. Y.

EYRES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Boston, Mass.

WAX BROS., 143 Tremont St. Orders for New England States receive our careful attention. We are located in the theatre and shopping district. Telegraph and mail orders solicited. Satisfaction Guaranteed. Established twenty years.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2840 and 4065.

Chicago, Ill.

HAUSWIRTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Dayton, O.

W. G. MATTHEWS, FLORIST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Denver, Colo.

THE PARK FLOEAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of reasonable varieties of flowers always on hand. Wire me your orders.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of reasonable flowers always in stock; delivery facilities perfect.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

Retailers desiring a share of out-of-town trade should be represented by a card in this column.

Philadelphia.

A Rose and Peony Exhibition.

The peony and rose show, outdoor grown, of the Pennsylvania Horticultural Society was held June 2, and unfortunately for the best showing of peonies that could have been made the date arranged was just one week too late. The heat of some of the days last week and the downpour of rain on Saturday last damaged the peonies very seriously, so much so that only the very double and naturally late varieties were at all presentable. Among them the very best was that good old standby Festiva maxima, these were grown by and shown in the name of Edward Swayne, Shawson, near West Chester, Pa. The only variety that came anywhere near to this one was the Comroue d'Or, exhibited by John McCleary, gardener for Mrs. Penfield, Germantown. There is evidently a close relationship between these two varieties, so much alike are they in their general characteristics. Both are noble peonies, and are worthy of extended cultivation. Polyphemus in Joseph Hmley's collection impressed me very favorably. It is very full in the anemone form, with very large guard petals, and it is delicate pink in color. Marquis de Lancy in the same collection was excellent, the form good and quite large and very full of petals, being rose pink in color. It looks like a good commercial variety. Mrs. Chamberlain, dark rose pink, seems to be a good keeper. I must say that the flowerers as a rule lacked staying qualities, though toward evening they did seem to brighten up quite considerably.

The rose show, I believe, was the very best ever held by this society at this season of the year. Wm. Robertson, gardener to Mr. John W. Pepper, Jenkintown, was first as usual. William has won first prize in this class for some years past. He has the faculty of producing longer stems on the outdoor roses than any other exhibitor. How do you do it, William? The only blot in this exhibit was on one variety, the name "Madame Gabriel Luizet" written where it did not belong. There were quite a number of roses exhibited, many without any names at all. Of what use is anything exhibited—no matter what, if it is not named, and named correctly? Killarney appeared in many exhibits and always correctly named, when labeled at all, which goes to show that Killarney is a good rose to grow outdoors; and it is of such recent introduction that everyone seems to know it, and it is an easy name to remember. Fran Karl Druschki was seen in more than one exhibit, and for the same reasons as given in connection with Killarney. It was labeled correctly, General Jacqueminot, Baroness Rothschild, Margaret Dickson and Mrs. John Laing were all in good form, and I am glad to be able to say, labeled correctly.

The gem of the whole exhibition was a white form of Cattleya Mossiae, exhibited by the Julius Roehrs Company, Rutherford, N. J., on which were 12 fully expanded blooms.

Among the herbaceous flowers Thalictrum album showed up well with its flossy creamy white flowers. Foxglove bloomed up in fine form in several collections, many of the visitors speaking of it as digitalis. I was very sorry to see the oriental poppy (Papaver orientalis) labeled just simply "English poppy." Too bad some gardeners are not more particular in the labeling of the flowers composing their exhibits. Pyrethrum James Kelway showed up well as a very bright daisy-like flower. In the daylight I suppose it was magenta.

The Florists' Club of Philadelphia held its June meeting on the same evening as the peony and rose show by the older society, and a most interesting gathering it proved to me. Arthur A. Niessen's excellent paper was well received and provoked quite a profitable discussion, in which Messrs. W. K. Harris, John Westcott, Leo Niessen, Adolph Farenwald and others took part.

After the business meeting a "smoker," and all the necessary accessories were freely provided, and the entertainment committee deserve great credit for the number of excellent songs and other forms, partaking of the vaudeville, that were kept on tap until a late hour. Altogether it was a very profitable and pleasant meeting, and it is to be hoped that others equally as good will come off in the near future. EDWIN LONSDALE.

Around Town.

Mr. Moorhead, of the Rutledge Nurseries, Morton, Pa., was in town this week calling on the trade.

John McIntyre, 1501 Rainstead street, did a very good business in peonies last week and is showing some fine Spanish and Siberian iris.

Eugene Bernheimer, 41 South Sixteenth street, has some fine sweet peas, with long stems, which are better than any he has had this season. He also has some extra fine stock of adiantum and Asparagus Sprengeri.

The death of R. G. Palmer occurred May 20. Mr. Palmer was well known as a grower of Doylestown, Pa., in former years, of late he had been employed as salesman for Bernheimer and others. Mr. Palmer was thirty-eight years old and leaves a widow and children.

One of the most popular wholesale salesmen, A. Stevens, has resigned his position with Edward Reid, and is now connected with the Eugene Bernheimer Company.

The Flores Gardens are building additions to two of their carnation houses, which are now 130 feet long. They are now planting carnations in the greenhouses.

Jacob Becker, 5210 Market street, reports a very good business in ferns, ranging from \$1.50 to \$2 per pot. There was also a demand for potted geraniums of which the red colors went fastest.

W. J. Baker, 1132 South Penn Square, handled a large number of peonies, sweet peas and carnations for Memorial Day. He reports a large number of out-of-town shipments during the week.

Mr. Schroeder, West Philadelphia Flower Shop, reports a fairly successful business for Memorial Day.

Berger Bros. are showing some excellent fancy lily of the valley and fine large carnations; they report a fairly good business Memorial Day week.

The failure of Edward Steel, Dittman and Vankirk streets, Wissinoming, Philadelphia, has been announced.

The Frankford Flower Shop, 4420 Frankford avenue, reports an unusual number of designs for Memorial Day. Mr. Batzell is an amateur photographer and has a nice collection of photographs of the designs for which his place is noted.

Mr. and Mrs. Paul Berkowitz and their two daughters will visit Louisville, Ky., June 11, to attend the marriage of their son and brother, W. E. Berkowitz, a promising young attorney of Philadelphia, located in the Commonwealth Building, who will be married to Miss Edna M. Levy, a prominent and accomplished young society lady of Louisville.

The Philadelphia Cut Flower Company, 1517 Chestnut street, reports a fair business during Memorial week. This company is showing some extra fine sweet peas and Kaiserin Augusta Victoria roses.

Club Meeting.

The combination business meeting and smoker was opened Tuesday evening, at 8.15, with about 125 members and friends present. Arthur A. Niessen read a very able paper, which was freely discussed. At the close of the business meeting the evening was given over to the entertainment committee. Piano solos, songs, comic and sentimental, followed by a number of stories by some of the members. Mr. Hols of the Mask and Wig Club gave one of his famous songs, entitled "Club Life"; a clog dance was given by the Quinn Boys, and P. J. Lynch gave a humorous talk and sang the "Palms." Refreshments and cigars were freely distributed, and all had a very enjoyable time.

The bowlers are busily engaged trying to select the convention team; a hard race is in progress. P. M. R.

DAVENPORT, IA.—The Tri-City Florists held a meeting Thursday evening of last week at the Rock Island Turner hall. A committee of three members, Theodore Ewoldt, A. Anderson and Henry Gaetjke, was appointed to have charge of the annual picnic, which will be held early in July. Theodore Ewoldt extended an invitation to the members to come to a strawberry social to be held the latter part of June at his home in Davenport. The topic for discussion was "Flowers for Memorial Day" led by Adolph App.

Pittsburg.

Trade News.

Memorial Day trade was not up to expectations, particularly in the plant market. Cut blooms sold fairly well at very reasonable prices, but there was too much outdoor grown stock on hand. Peonies are not so good this year, and a few very hot days helped to spoil them more. Sparas and Crimson Rambler rose plants sold poorly. Good blooming plants of all kinds did not sell nearly as well as last Memorial Day, when everything in flower was cleaned up and prices were lower than for quite a few years. Almost all Finch stock, such as geraniums, cannas, etc., went at \$1 per dozen and even lower, and there is yet plenty of stock unsold. The department stores handled a good many plants, which were sold pretty low, one firm offered Finch geraniums at 7c. per plant, perhaps for less than cost, and they sold very fast.

At wholesale by the thousands \$3.00 was about the lowest price the grower got, the average being a little higher. Cannas in Finch pots also sold very low. There were more bedding plants in the market this season, for several of the cut flower growers who previously handled very few, or none at all, had a good stock for sale and offered them at tempting prices to the wholesale trade. The quality this year was not of the best; it was rather quantity than quality from the appearance of the stock. Geraniums and cannas were the leaders; alternanthera also went well.

John Bader's trade in plants was very heavy and he was kept busy for some weeks; being the largest grower in our city and having a good shipping trade gives him some advantage over others. Mr. Bader is now enjoying a few week's fishing in the northern part of the State to get a needed rest.

The regular monthly meeting of the Florists' Club has been postponed to Tuesday, June 9 at 8 p. m. It will be held in the store room of the Pittsburg Cut Flower Company, 222 Oliver avenue. Peonies, outdoor roses and other blooms will be shown and discussed. Cash prizes to the amount of \$20 will be awarded to private gardeners only. For the best blooms of outdoor roses, first prize, \$10; second, \$5; for the best peonies, first prize, \$10; second, \$5. This is the first competitive display of the private gardeners for cash prizes and the competition will continue for a year. E. C. REINEMAN.

Washington, D. C.

Trade Notes.

The humid days preceding Memorial Day had a somewhat deteriorating effect upon flowers as well as a sweltering public, but there was no lack of enthusiasm and sales were about normal. As usual there was an immense quantity of low grade cheap stock sold and, additionally, much was gathered from yards. Then there were contributions by the various stores and subsequent distributions at the various cemeteries, chiefly Arlington, where numberless blossoms are annually strewn upon the graves of Union soldiers. There were quite a few set pieces, such as wreaths, pillows, crosses, etc., made by the various stores. The public generally turned out en masse. About 4.30 p. m. a terrific rainstorm sent them scurrying to places of shelter, but gave great relief from the excessive heat.

The decoration for the few Confederate dead in Arlington will take place on June 7; this also calls for quite a number of flowers and the ceremonies set for this occasion bid fair to be of a most impressive character, including the unveiling of the Southern cross.

One of the unique features of Memorial Day just past was the liberating of a boat laden with flowers upon the waters of the Potomac at Washington. After appropriate ceremonies this little craft, with its load, was set adrift to land where Providence might cast it, in honor of those who had lost their lives by water. The idea originated but a year or so ago, but seems rapidly to be spreading to other sections of our great country.

For some time it has been the ambition of many of our fellow florists to have the Crimson Rambler rose flower in time to use the cut sprays for decorating on May 30, but so far as is known, the blooms reached greater maturity this season than ever before, the most likely to the premature hot weather. The peony crop locally was much hurt by the

hot drouse and by a heavy frock on May 27 (over-abundant).

Cut peonies generally show the end of the season for Washington flowering plants and if hot weather continues, and the season prove to be so hot such occasions as June weddings and school commencements; the latter usually continue and assist trade greatly until about the 20th of the month.

With the closing of the Congressional session on May 30, many of the society people are leaving the city.

JAS. L. CANARY.

Detroit.

Memorial Day Trade and its Lesson.

The long looked for chance for a general activity struck us a few days before Memorial Day. The wholesale houses were well loaded down with shipping orders going as far as St. Paul, Minn.; they soon realized that a hurry call for more goods was needed to get enough for shipping as well as local trade. Summing matters up, everything was cleared out at good prices except peonies which for some reason or other found no favor.

The retailers have done equally well, and everything sold well at good prices; in many instances an increase of 15 per cent. in trade volume has been acknowledged. A more liberal display of peonies by the retailers might have improved and brought about additional sales of these flowers.

This condition we view with more gratification because it demonstrates the general advance our product has made in the eyes of the purchasing public. We may feel skeptical in view of the many reports of a falling off in business during the times of stringent money, still the real volume of trade the florist does per year cannot be judged in that way exactly. We know full well that a large funeral or wedding may increase the receipts of one month by a couple of thousand dollars, and it may be a year or two before this recurs. I remember one customer leaving an Easter order for 150 boxes of flowers, each containing one dozen lilies, but last Easter this party was in Europe. Such incidents cut into our receipts and furnish grounds for everlasting debate on the question as to whether trade has improved or not.

This recent experience in the Memorial Day business, though, proves to us all one most important point, namely, that the general public look at our product as a necessity; they may curtail the expenses in this or that line, but when a public holiday arrives the florist receives his full share of patronage. It is entirely in our hands to cultivate further this favorable omen, and the most successful way to do this is to supply the best goods and not increase the price too much. FRANK DANZER.

Providence, R. I.

News Notes.

The new greenhouse, 300x41 feet, being built by William Hay at Oaklawn, R. I., and almost completed was considerably blown out of plumb by the high winds of Saturday night; both ends of the greenhouse were open and the wind getting under the structure caused considerable damage.

James B. Canning reports business much better than usual the past month and is thoroughly cleaned out of his immense stock of bedding plants, which was one of the best seen about here. His Memorial Day trade far surpassed that of any previous year.

Thomas F. Kellar is moving to his new store on Mathewson street, north of Westminster street, a most excellent location.

Engene McCarron says it was the busiest Spring he had in his twenty years in the business, both in landscape work and funeral designs.

Joseph L. Reuvelod has returned to his post with the T. J. Johnston concern after another attack of a gripple.

William Parry has resigned his position at J. F. Woods.

G. J.

SCHENECTADY, N. Y. Memorial Day trade this year seems to have been equal to last year's. The general call was more for cut flowers than plants, although small bedding plants were in demand.

Frederic A. Howe opened his branch store on Jay street in time to catch some of the Memorial Day trade; he has fitted out the new store in an up-to-date manner, making it an attractive place. B.

THE WEEK'S WORK
Timme's Timely Teachings.

The Cape Jessamine.
This is the time of year when the Cape Jessamine as a potted plant is most easily had in bloom. The finest specimens of Gardenia florida in pots that ever private gardener pointed at with justifiable pride were brought into bloom in the congenially humid atmosphere and under the lightly screened glass roof of a camellia house. It is under conditions such as these liberally provided for where plant life in its perfection must be a part of a richly endowed estate—that the fastidious Cape Jessamine thrives and is most easily managed. Grown in pots as market plants, gardenias will never be in line with what commercial florists consider profitable stock. Their behavior as such under a treatment oftentimes sweepingly alike for all the rest would place them among the least desirable. At best, if their foliage retains its glossy green and buds remain to open, their flowering season is short, and since they are most unsatisfactory plants for the living room or parlor adornment their culture as such to any appreciable extent by the retail plant grower cannot be encouraged. A limited number of early and late flowering, nicely shaped plants, if so desired, may be obtained by preserving some from the young stock, intended for mass culture in benches and by potting up a few of the best to be found among the old plants in clearing a bench. All this is work that had better be attended to now, so that the young stock to be benched may have the benefit of the warm weather now approaching to become firmly established, with plenty of time before it to gain the required strength for the production of delicious, highly valued flowers at a time when gardenias are most apt to prove their merit commercially.

The Planting of Gardenias.
Good drainage in pots or benches is of prime importance. Especially should gardenias be safeguarded by this simple means against the greatest of evils in their culture an overplus of moisture at their roots, causing befouling of soil, decay of root terminals and in its train the yellowing of leaves and rapid deterioration of the plants. All this is not questioned by any one who ever grew gardenias, but it is my opinion that in the matter of drainage, especially as regards gardenias as a cut flower crop under bench culture, precaution is frequently carried too far. Hill planting ordinarily has its good points, but in connection with properly working drainage underneath it only adds to the cares in the treatment of the stock. To provide each plant with its own little hill and this on a foundation of an excessively high layer of water shedding material at the bottom of the bench, renders the keeping of a uniform and needful degree of moisture in what soil there is for the roots to work into an almost impossible task. An inch or at the most two inches of rough, coarsely broken up turf soil is all-sufficient for the covering of the openings in the bottom of the bench. Between three and four inches of the soil proper, placed on this, fills the bench. The mixture should be of a rather sandy, gritty nature, be made up of very old, earthlike manure, easily broken up, fibry turf and leaf mold, gathered in the woods, not made at home. The right stock for planting are, thrifty, deep green, young plants, well rooted, but not rootbound in 3-inch pots. Any plants coming out of larger pots, or old ones to be reset anew in planting, will throw their best crop of bloom too early to prove profitable. Frequent sprinkling rather than heavy watering is to be relied upon in securing a good start for the plants.
Fuchsias.
Among flowering plants of the true greenhouse and dwelling room class, ever admirable when well grown and in bud and bloom, fuchsias continue to hold their position of prominence. For greenhouse display and sales in potted plants during the Summer months none surpasses the fuchsia in point of easiness in culture and enticing appearance to buyers. The growth of fuchsias, at this season in particular, is wonderfully rapid, and as

long as this is encouraged by timely re-potting and proper care, grand and stately plants may be had in due time for a highly exacting trade later on. But most satisfactory to the greater class of patrons greenhouse men are called upon to supply during the warm season, are bushy plants of medium size, compact, bushy growth or conical shape, every branch showing buds and bloom. Most varieties, after having been transplanted for the last time into the richest of compost, at first make a remarkable, most luxuriant growth, branch out freely without the grower's aid and seem to find no time for the formation of buds. But, finally, when the roots, balled in their toraging ramble by the inner walls of the pots, form themselves into a loosely interwoven network around the soil, the plants get ready for business, developing buds and flowers on every ever so small terminal, as well as the stronger leading shoots. This they will keep up for a considerable time if rightly attended to, which merely stands for what nearly all kinds of growing and flowering plants at this season require - water in frequent and thorough going applications, fresh, freely circulating air, as much as the greenhouse will hold, and some shade on sunshiny scorching days.

Pansies.

In outdoor gardening the planting of pansies seems never to come to a stop from the earliest beginning until nearly the end of the season. Our books testify to sales in pansies as late as the middle of August, while orders for the making and stocking of pansy beds throughout June and July are nothing unusual. That stock for these late plantings must be raised expressly is self evident. We make our latest sowings in March, but seeds sown even as late as the middle of April will amount to something fine in flowering pansies during the three or four closing months of the season, long after the earliest lots have lost their erstwhile vigor, grown into stringy, poorly flowering runners, a sorry sight, indeed, in every garden. When planting pansies in beds or ribbon lines, especially these late pansies, rich soil must be the first thing to make sure of. Stable manure, not necessarily far advanced in decomposition, may be used to the extent of forming fully one third in the soil, and more if well decayed. An intermixture of a reasonable quantity of sifted coal ashes is good for pansies and helps to keep the moisture, which, in spite of frequent rains and supposed overabundant dance therefrom, is hardly ever sufficient for the needs of flowering pansies any longer than a day or at the most two. Pansies growing in rich soil form an astounding bunch of roots, and when examined but a few hours after a heavy rain shower will be found to be dry enough for another good drenching. Water, plenty of it, with no radical drying out between drenches, is what pansies like, is what they need, if expected to remain in fine condition for any length of time. FRED. W. TIMME.

Plant Growers' Outing.

The New York and New Jersey Association of Plant Growers held an important meeting at the Hotel St. Denis, Broadway and Eleventh street, New York City, on June 2, 1908, at which a large gathering was present. The committee which was appointed at the last meeting to arrange for an outing of the association, and which consisted of A. L. Miller, Herman C. Steinhoff, Herman Schuelzel and John Scott, made its report. The association will give its outing on June 25, 1908, at Terra Marine Inn, Huguenot Park, Staten Island, and the members will meet at the Staten Island Ferry, foot of Whitehall street, New York City, at 10:30 a. m. on that day and then proceed by boat, train and automobile to the place of the outing. The committee has made full arrangements for plenty to eat and drink, music, dancing, games, races, bowling and other sports and pastimes, and it is evident that the association intends to have a day's fun. In order to evade the personal tax upon its capital, which has rapidly increased since its incorporation, the association has decided to furnish each of its members with tickets to its outing gratis. It is expected that all members with their families and friends will attend and thoroughly enjoy themselves.

W. H. S.

OREGON, MO.—N. E. Murray, a leading horticulturist, is dead. He was a prominent and long-time member of the old State Horticultural Society, and a former president. When the horticultural board was organized a year ago, Mr. Murray was appointed by Governor Folk one of the six trustees on that board.

REVIEW OF THE MARKET

NEW YORK There is so much stock coming into this market at present that such a thing as fixed prices on any line almost is out of the question. The Memorial Day trade did not begin to use up the stock available and no advance in the values of the previous week was possible. In spite of all the talk about June being a great month for weddings, communciations, etc., there is nothing taking place of any moment so far, and flowers of all kinds are much too plentiful. Peonies are beginning to be a factor, and from reports we hear an immense crop of these flowers is to be sent into the city; what the prices will be can only be told after the season is over. At the present time it is possible to get \$1 per dozen where the variety is choice and the quality perfect; ordinary flowers are, however, available in quantity, and prices on these range from \$3 to \$1 per 100.

Roses continue plentiful, though, of course, the quality is not what it was some weeks ago. Prices obtained are very unsatisfactory and must be extremely disappointing to the growers. Carnations are still in very heavy supply and cannot be cleared out completely even when the speculators' prices are met and lots of several thousand are disposed of at one sale. A surplus still always seems to remain after the day's business is over, however cheap the ruling price may have been. Callias are quite plentiful just now, and to those desiring to make disposals of these flowers, this should be their opportunity, as in hundred lots they can be had quite reasonable.

Lilies are yet in fairly good supply, prices remaining about the same. Lily of the valley is one flower for which there has been a demand somewhere near equal to the supply during the last few days; consequently, prices have remained somewhat firm with a possible advance on special grade lots. Lilac is not so much in evidence, though there is a little here and there. Sweet peas are falling off in supply; there is not likely to be any dearth of these flowers for long however, as the outdoor crop will soon materialize. A few gladioli reach the market daily; we noticed some fine spikes of the two new varieties, Princes and America in W. P. Sheridan's store this week.

CHICAGO Memorial Day business in this market was good. There was plenty of everything, and an enormous quantity of stock was handled. While prices were not quite so generous as in previous years, the aggregate sales swelled the volume of receipts to an extent which more than made up for the deficiency in prices. Wholesalers generally express themselves as having had a very satisfactory holiday trade. Roses of all kinds moved well, although the bulk of the offerings were somewhat off in quality owing to the warm weather. Carnations sold well in all but the white varieties, the lower grades of which had to be sacrificed. Peonies were plentiful and brought from 75c. to \$1 per dozen. In the better grades, however, there was much evidence of a long holding of flowers, and many shipments fell to pieces in the wholesalers' hands.

The market is somewhat dull this week and sales are largely of the forced kind. After the best of everything is picked out the balance moves only under pressure and at bargain prices. Carnations are in abundance, and hang in considerably. There is a noticeable absence of anything like quality in many of the arrivals; when good prices received come within the range of quotations. Lilies are plentiful, but do not move well. Lily of the valley is coming in in very small quantities, not nearly sufficient to supply the demand, which is always good in June. Sweet peas are also on the scarce side, and much larger stocks could be profitably handled. There is quite a demand for yellow stock, but practically nothing with which to meet it. Cool weather again is bringing a marked improvement in certain indoor stock, and if it continues is likely to have a beneficial effect on June trade.

J. H. P.

NEW BEDFORD, MASS. Memorial Day trade for 1908 was a hummer, considering the hard times. There were plenty of flowers on hand, also a lot of outdoor stock. Carnations retailed at from 75c. to \$1 per dozen, the latter price being for fancy. Roses brought \$1.50 per dozen retail; sweet peas, \$1 per hundred blooms. There was a good demand for bouquets, these being sold all the way from 50c. up. Geraniums were great sellers, 12c. and 15c. each being the price asked. Pansies sold well, also daisies and forget-me-nots, 35c. and 50c. per dozen being the general price.

HORTICOLA

INDIANAPOLIS It is pleasing to report that Memorial Day business continued favorably with that of last year which was a record-breaker. The improvement in the general business world is still filled with mutterings of discontent and poor trade, from which the flower business has been wonderfully immune. Extremely warm weather caused downward flowers to bloom on every hand. Peonies, particularly, were accessible to the masses at low figures, and kept many from buying at the shops; \$1 to \$2 per 100 was the price for peonies early in the week; \$3 to \$4 per 100 was obtained for them by Friday.

Crown Hill Cemetery, its sides bedecked with masses of well-filled vases and flower strewn graves, presented an inspiring sight on Thursday. The profuse quantities of flowers noticeable on every hand last week are about all gone. Since, with cool weather, a reaction has set in which makes it almost impossible to obtain a respectable supply of stock for the trade. Carnations were offered during the warm spell for \$1 per 100, with no buyers; now \$2 to \$2.50 per 100 is readily obtained.

Long-stemmed roses of any size will be in demand throughout the month for weddings and other social affairs of unusual dimensions. A large portion of the roses received are of poor quality and bring prices far below quotations. Excellent Kaiserin Augusta Victoria La France and Richmond are bringing \$7 to \$8 per 100. Bride and Bridesmaid are poor at \$1 to \$5 per 100. American Beauty too, have fallen from the standard at \$3 to \$20 per 100.

The supply of Harrisi lilies and callas is augmented by some good auratum at \$15 per 100.

The bedding season is drawing to a close. Those with stock on hand will have no difficulty in disposing of it, as several have withdrawn from the field. The prices received for much well-grown stock are so low that it is not always a profitable business. L. P.

ST. LOUIS The cut flower market was in better shape the past week than is the latter part. Business picked up greatly and the wholesalers cleaned out pretty well. Friday and Saturday reports for Memorial Day business were good, and an increase over last year is reported. Prices went up a point or two, and almost everything in season could be had. To-day, June 1, finds the commission houses scarce on some stock for the first time since Easter. There are plenty of American Beauty in all grades; the select long-stemmed blooms bring \$4 per dozen. Bride and Bridesmaid are in plenty, also Killarney; selects go at \$6 per 100, and others as low as \$2 per 100. Carnations are up to \$3 for fancy and \$2 for next choice; these are becoming scarce. Plenty of peonies can be had at \$3 and \$1 per 100. A lot of outdoor stock is in, but selling at cheap prices. The weather has at last settled and we have had no rain for the last four days. Planting out is almost completed.

ST. PATRICK

PHILADELPHIA The sultry weather of last week was the cause of an extra large quantity of wide open stock, and the unusual large quantity of flowers found everywhere. Up to Friday all the commission houses were busy day and night shipping stock out of town. The local florists held off buying till the last minute. Peonies were very plentiful and went at an average of 60c., although in one or two cases 15c. was obtained.

Sweet peas bring from 50c. to \$1. American Beauty run from 15c. to 25c. Some water lilies are seen in the commission houses, selling at \$1.

Considerable business was done in bedding stock, especially by the florists located near the cemeteries. Scarlet geraniums were the leaders. Potted ferns ranging from \$1.50 to \$2, also sold well. P. M. R.

ST. PAUL, MINN. All things considered, trade has been remarkably good during May. The rainfall has been one of the largest on record, hardly a day passing without showers. This has hindered planting a great deal and has also hurt store trade. Memorial Day business surpassed all previous records. There were not many outdoor flowers—lilies all gone and a few snowballs just coming in. Stock was fairly plentiful though there was a noticeable shortage of carnations. Shipping trade was very heavy. School communciations began last week in the county towns so that helped to augment the demand. This week communciations and June weddings will call for lots of red roses and carnations.

The season is well advanced. Spirea Van Houttei and snowballs are now well along and peonies are beginning to show color. VERITAS.

BOSTON The Memorial Day trade in this city was fairly much more so than in former years, but prices did not advance notably over well as last year. There was quite a demand for all kinds of flowers, although of some stock there was such a surplus that had been waiting for days, that it was hard to move some of it. Now stock is plentiful in its large quantities, and the popular flowers like rose and carnations can be bought very cheaply. Wedding decorations are now starting in, which use up many of the finer flowers. American Beauty roses have not been so much in demand, and the other grades of Kaiserin Augusta Victoria, Sanyo in du Print, Edin Carrot, Killarney and Richmond are still very fine, but the figures they bring do not average so high as at the same time last year. Carnations are abundant, colored sorts sell fairly well, but there is practically no demand for white varieties.

Lilies are a drug, but callas are not so plentiful as they have been. Gladioli are now abundant, so are the early varieties of peonies which sell fairly well. Marguerites of extra fine grades are seen, which sell well. Sweet peas are in fair demand. Lily of the valley from out of doors is about past, but it does not have the demand of that grown under glass. Spideras are yet plentiful. Fewer lots of such flowers as stocks, candytuft, etc., which help swell the variety at this season. J. W. D.

PROVIDENCE, R. I. Business for the month of May and Memorial Day was very satisfactory, both in cut flowers and funeral work. The sales of bedding plants were better than at any time in several years.

There was a profusion of first-class stock both in greenhouse and hardy or outdoor cut flowers.

Deutzia gracilis is one of the best flowers for the making up of moderate priced bouquets and baskets that can be had.

Carnations brought \$10 per 1000 when first-class; roses from \$5 to \$12 per 100, according to grade. Stocks were very fine, realizing from \$4 to \$6 per 100. Sweet peas sold at 60c. to 75c. per 100; Lily of the valley, \$3 to \$4; lilies, \$8 to \$10; Marguerites, \$1.50 to \$2; candytuft, 50c. per bunch; spirea, \$3 to \$5; and gladioli, \$6 to \$8 per 100. G. A. J.

CHANGES IN BUSINESS.

The Florists' Exchange will be pleased to publish under this heading all changes occurring in the addresses of firms connected with the trade as well as notices of concerns or individuals just starting in business. All such items are inserted free of charge.

EAST LIVERPOOL, O. The Lake Newell Floral Company has opened a branch store here in the Travis block on Sixth street.

GARDNER, MASS. Arthur E. Graves has bought a greenhouse here and will engage in the business of raising vegetables for the Boston market. He will take possession at once.

LA CROSSE, WIS. Articles of incorporation have been filed for the La Crosse Floral Company, which is capitalized at \$10,000. The incorporators are C. E. Schaefer and W. R. Elliott. Six acres of land have been purchased and two large greenhouses will be erected.

PROMYKILL, CONN. The A. N. Peterson Company has filed a certificate of incorporation. It is capitalized at \$20,000, and it will take over the extensive business now operated by A. N. Peterson. The incorporators are Andrew N. Margaret G. and Wallace R. Peterson, all of Cromwell.

FIRMS WHO ARE BUILDING.

Items for insertion under this heading are respectfully solicited from our subscribers. They are published free of charge.

CRESTON, IA. John Miller is contemplating the enlargement of his greenhouse plant.

SALEM, ORE. Carl Roof is building two new greenhouses, one 22 x 100, the other, 22 x 100 feet, to be devoted to carnations and v-b-lots.

BUSINESS DIFFICULTIES.

BATH, N. Y. Henry Drummer filed a petition in bankruptcy in United States Court in Bath, on Monday May 25, 1908. His assets are given as \$1,000 and his liabilities \$1,110.

St. Louis.

News Notes.

Mr. M. S. A. of 1500 W. Indiana street is on his way to the State Garden to do his first planting of the year on Sunday, June 7. The big boys are hard at work on getting the planting, which has been delayed by bad weather, and Professor Fitch says everything will be in good shape for the opening.

Frank Weber of H. J. Weber & Son Nursery Company was in St. Genevieve, Mo., last week with a big force of men erecting a large rack of flowers for the annual meeting of the Southeast Drainage Association. Other decorations were also made by him.

William T. Jordan, son of the late J. M. Jordan, is assistant to City Forester A. Meyer, Jr., and is doing a great deal of good for the department.

Saturday (Memorial Day) the four wholesale houses closed up in the afternoon to give their employees a half holiday.

Henry Emmons of Belleville, Ill., and Edwin Decker of St. Charles, Mo., were in the city Friday of the past week buying Memorial Day supplies.

Park Commissioner Scoulan has got himself into a peak of trouble by announcing that no more picnic parties could be held in Forest Park. All the women's clubs are up in arms and visited the mayor to have the order rescinded; he promised to look into the matter.

The June meeting of the Florists' Club will take place next Thursday afternoon at 2 o'clock in Bowman Hall, 1023 Locust street. President Young and the rest of the officers will be on hand, and a large attendance is looked for to select the grounds for the annual picnic.

ST. PATRICK.

A Card of Thanks.

The St. Louis Horticultural Society wishes through these columns to express its appreciation and thanks to the various growers, wholesalers and retailers for their liberal contribution of choice and fresh cut flowers donated to the "floral booth" of the Charity Carnival, held May 16, 1908.

Otto G. Kohn, Secretary.

New Orleans.

News Notes.

J. Valdejo sailed for Europe a few days since, to be gone three months.

C. W. Eichling has purchased the buildings and ground, where he has been located for several years past, at the corner of St. Charles avenue and Delachaise street. As St. Charles avenue is the front residence street of New Orleans Mr. Eichling can be congratulated upon his purchase.

James A. Newsham returned during the past week from a successful orchid collecting trip to Central America. Mr. Newsham visited Mexico, Guatemala, British and Spanish Honduras. In addition to several shipments already received there is on the way a fine lot of Laelia Digbyana and superb ones, Ocotoglossum grande, Oncidium splendendum and an assortment.

We are passing through a period of excessive heat, but plants of semi-tropical nature seem to enjoy it and are blooming profusely.

There is coming to the market just now large quantities of Triumph (Chrysanthemum maximum) daisies and some of the superior Shastas.

CRESCENT CITY.

Indianapolis.

News Items.

Herbert Heller of New York was a recent visitor. A commission house in the vicinity of Fortsburg, which would handle Indiana products exclusively, is a necessary institution in his opinion.

Another hailstorm in this vicinity Tuesday evening, May 26, broke a quantity of glass in the greenhouses at Cunningham. Bergen Brothers Company were the chief sufferers; the Smith & Young Company lost but a small amount.

The State Florists' Association will hold its monthly meeting Tuesday evening, June 2. Routine business will be transacted.

The wedding of Mrs. Ellen Decker, daughter of E. J. Decker, and Fred K. Decker took place June 4 at her family residence.

The 11th annual meeting of the B. P. O. E. will be held at Crescent City, Ind., during this week. J. E.

Wittbold Watering Device in Operation upon a Side Bench—The Showering Effect is Plainly Seen in the Photograph

THE WITTBOLD WATERING SYSTEM

FOR GREENHOUSE AND FIELD WATERING

A simple arrangement of pipes, special nozzles and swivel wheel—EASILY INSTALLED BY ANYONE in a greenhouse or outdoors. An entire house may be WATERED or SYRINGED in a few minutes by simply turning on the water. The operator directs a CONTINUOUS SHEET OF WATER upward from bench or floor, downward from above, or parallel with a bench so that only the soil is watered. Potted or benched stock thoroughly watered or syringed all along each line of pipe in any manner required.

Installed at small cost Is a permanent investment. Never wears out Pays for itself in hose and labor in a few months.

Try it on a line of pipe. A swivel wheel and 20 nozzles costs only \$5.00 and will show exactly how valuable a complete equipment would be to any florist or vegetable grower.

Can Be Seen in Use At

Vaughan's Greenhouses, Western Springs, Ill.; Geo. Wittbold Co., Chicago; A. Abten, New Orleans; South Bend Floral Co., South Bend, Ind.; Davis Bros., Morrison, Ill.; W. B. Davis & Co., Aurora, Ill.; Stephen Hyde, Carthage, Mo.; A. C. Oelchig & Son, Savannah, Ga.; Chamberlain & Bunker, Fremont, Mich.; R. T. Donnell, Springfield, Ill.; Wm. Edlstein, Milwaukee, Wis.; Klehm's Nurseries, Arlington Heights, Ill.; Lincoln Park, Chicago, and many other places.

struck the trade, for on Sunday afternoon might be seen Messrs. Evans, Edgar, Thurston, Forbes, Macklin and others.

Welch Brothers did an extensive Memorial Day trade, keeping several extra men and a special American express team bustling, besides all their regular force.

E. A. Wood is again one of the first to bring in peonies to the market.

McMullin had the decorations for the Kenny-Bottomley wedding at the Cathedral on Tuesday. This was one of the most elaborate decorations of the season, and when the name of McMullin is connected with it harmony of arrangement and artistic effects are there also.

Henry M. Robinson & Company had a large Memorial Day trade, their sales of hardy ferns, etc., as well as cut flowers, far exceeding those of last year.

J. W. DUNCAN.

Newport, R. I.

Horticultural Society Meeting.

At the regular meeting of the Newport Horticultural Society, held Tuesday evening, May 26, President John T. Allan in the chair, the business was mostly of a routine character. The president named the following as the committee on awards for the two exhibitions to be held this year: Messrs. Bruce Butterton, Paul Volquardsen and John Bannagartner, all members of the society. The executive committee endorsed this nomination. All are tried men and are expected to give satisfaction.

Ex-Secretary David McIntosh, now of Tuxedo Park, was present and entertained the members with a glowing description of the famous roads, mountains, glens and lakes of the park, giving a good general description of the vegetation abounding there, and making special mention of the native ferns and orchids. This informal talk and the pleasure of meeting an old friend made the evening one of the pleasantest which the members have spent together for some time.

It is reported that there is to be keen competition in the class for collection of vegetables, the prize being a silver cup offered by the Henry A. Dreer, Inc., of Philadelphia. This prize must be won three times (not necessarily successively). It was won last year by Samuel Spoons, gardener for Mrs. W. B. Green.

Hitchings & Company, New York, have secured the contract to erect a small range of modern greenhouses at the J. R. Drexel estate at Oehre Point. The range includes some four houses in all; a palm house, an orchid house, a carnation house, a house for bedding plants and a potting shed. This is the estate over which President Allan of the Horticultural Society is in charge, and has been noted in the past for stove plants, gardenias and gladiolus.

The florists had an unusually heavy demand for cut flowers and pot plants for Memorial Day. A call at their places of business revealed the fact that nothing in the way of a pot plant or flowers was left over. In cut flowers roses and carnations sold well.

The custom established last year by the Relief Corps of the G. A. R., of strewing the waters of the harbor in honor of the dead, was again heartily taken hold of by that organization, many flowers being used in this way. There was plenty of hardy material available for decoration, this year the lilacs and lily of the valley being just at their best.

News Notes.
The rhododendrons in this locality are exceedingly fine this season. The show of the Massachusetts Horticultural Society has just happened at the right time for these flowers being at their best. The peony show will likely be held next week with the rose and strawberry exhibition a week later.

The garden committee of the Massachusetts Horticultural Society visited the garden of James McKissick, West Newton, on Friday, and were much pleased with the fine varieties of peony Mothan they saw. They will again visit this garden when the herbaceous peonies are in bloom. This committee also expects to visit the peony establishment of E. J. Shaylor at Wellesley Hills on June 11.

It has been decided to keep the library of the Massachusetts Horticultural Society open on all Sundays throughout the year when there is an exhibition at the hall, and if the attendance warrants, it will be opened every Sunday afternoon, as was done last year.

The Waban Rose Conservatories have completed the addition to their American Beauty house and are now busy planting the same. They had a fine lot of Richmond and Killarney for the Memorial Day trade.

W. D. Howard of Milford is sending to the market some excellent colored carnations, which are being handled by his salesman, Wm. Aylward.

Chicago. The Week's News. The month of May was quite a busy one in retail circles, despite the weather, which was record-breaking in point of rain and cloudiness. A demand for bedding stock opened early in the month, and by the middle of it had assumed large proportions; in fact, many florists claim that the general demand has been heavier than ever before. An excellent business has been done in window boxes, the call for same being considerably greater than that for the same period last year. Funeral work was not nearly so heavy as it was during the preceding months of the year, but was, nevertheless, satisfactory in volume. A. I. Simmons, florist, West Sixty-third street, who was a week or two since transferred to his home from the sanatorium, where he has been under treatment for some time, is again an inmate of the institution and his condition is such that he is not expected to be able to leave for several months. Harry Balsley of Detroit is in town over Memorial Day, looking after the demand for pots. H. Hilners, of the Kenwood Floral Company, East Forty-seventh street, has been using some well-flowered pelargoniums in his window displays, and he says they have sold well. He has also shown some unusually fine hydrangeas, and had no trouble in disposing of them. Mr. Hilners is in receipt of very satisfactory advice concerning his daughter, who is studying music in Berlin under royal patronage. Not long ago the young lady was the winner of a grand piano in a musical competition. The E. F. Winterston Company is receiving regularly pink and white water lilies. George Reinberg is cutting from an excellent crop of Cattleya Mossiae, the

June demand for which is very promising. Considerable interest is being shown in the project for a picnic to be given by the Chicago Florists' Club, and a report from the committee having the matter in charge is looked for at the club's meeting on Thursday of this week. A. F. Longren of Des Plaines says that a splendid stock of the new carnation Lucille, originated by Fritz Bahr of Highland Park, is in the field. Mr. Longren, who is to disseminate it, has already booked several good orders for cuttings from growers who have seen this carnation. J. H. PEPPER.

New York. News of the Week. The New York Florists' Club will hold its June meeting on Monday next, the 8th inst., in the Grand Opera House building, corner of Twenty-third street and Eighth avenue. An exhibition of peonies is on the program for this evening, and as it will be the last meeting before the Summer vacation, no doubt there will be a good attendance of members. It is unfortunate that the local representative of the youngest of the Chicago trade papers does not confer with Secretary Young before giving out information regarding the doings of the club. It is also unfortunate for the members of the club and that portion of the trade which reads the advance information sent forth by the representative referred to. The idea of stating that roses will be exhibited at the Florists' Club's June meeting, which comes on the eighth day of the month! Whoever heard of indoor-grown roses being fit for an exhibition in June, or of outdoor-grown roses being right for exhibition so early in the month? It may be all right to make ridiculous statements in a news-letter when those statements are of a personal

nature and the object in view is simply to advertise in that way the person mentioned, but when it comes to juggling with the business meetings of a body of men, such as the members of the New York Florists' Club are, it would seem that a little more care and thought ought to be given to what is written, and that the secretary of the club should be conferred with before any statement is made public as to what the club is going to do at its coming meeting.

At the meeting on Monday evening, George V. Nash of the New York Botanical Garden will deliver an illustrated lecture on "Ornamental Shrubs." The Memorial Day trade was a very disappointing one, so far as New York and its vicinity goes. The weather was decidedly unpropitious; it commenced to rain in the forenoon, and, as the day advanced, it rained harder and continued until dark. There was not a possible chance of doing business in any line. Of course, the country people must have felt the influence of the weather more than any other branch of the trade, as this is a sort of harvest day for florists located near cemeteries; and as preparations are made for the handling of a large supply of both cut flowers and plants, it can easily be imagined what the results are when the weather makes it impossible for people to be out of doors.

It would seem to us that some one in charge should see to a better way of decorating the various monuments scattered throughout this city. We noticed that on the Lincoln monument, located at Union Square, a single wreath of hollyhock, about twenty inches in diameter, with a purple ribbon stretched across its center, was the only bit of decoration attempted. On the Lafayette monument in the same locality, which is equestrian, garlands of evergreen roping were wound around the rider and the horse, which gave the statue a most fantastical appearance; but the funniest decoration of all was the one attempted on the statue of Sunset Cox, located at Astor place. This monument is surrounded by a railing, and evergreen roping was suspended from the neck of the honored statesman to the railing at equal distances all around, and, to those unacquainted with this particular monument in its natural state, it presented the appearance of a gigantic Maypole. Surely, New York ought to get up something better than this display of evergreen roping for the decoration of its monuments!

Wm. Elliott & Sons have had one of the most successful seasons in the history of their plant auction business. They will hold their annual trade sale on Tuesday, June 23, at 12 o'clock noon. This annual sale has become of late years a special feature, and many grand bargains will be offered at the forthcoming one.

The annual exhibition of roses, strawberries and hardy flowers of the Tarrytown Horticultural Society will be held on Friday afternoon and evening, June 12, in the Music Hall, Tarrytown, N. Y. Prizes for hardy perennials, strawberries, roses, hardy shrubs, antirrhinums and vegetables are offered. The hall will be opened for the staging of exhibits at 10 o'clock on the morning of the show.

Lawson & Company, 2863 Third avenue, Bronx, have devoted one of their fine new show windows to a display of flowers. The floral department will be under the management of A. M. Reid, who proposes carrying only high-grade stock.

We are glad to report that John Kral of the staff of Moore, Hentz & Nash, wholesale florists, is sufficiently recovered from his operation to be able to attend to business a few hours daily.

The New York Cut Flower Company, commencing Monday, June 1, is closing its subrooms at 3 p. m. each day.

Ed. Behre, rose grower, who recently purchased the Burnett place at Madison, N. J., has just leased the establishment of Robert Schultz, and will run the same in connection with his own.

Louis Goldfarb, who has been laid up with a sprained ankle for several weeks, is able to get around again with the help of a cane.

Rickards Brothers, seedsmen, 37 East Nineteenth street, are sending out a neat folder, drawing attention to their business in general and to strawberry plants in particular.

The retail florists of Brooklyn have become permanently organized, with Robert G. Wilson, president, and J. V. Phillips, secretary.

Read! Read! Read!

The Magazine Feed Does It

The Water-jacketed Magazine Feed of the "Spencer" Heater holds coal in reserve and feeds it as needed so that the Heater requires attention only once a day in ordinary weather, or twice in severe. The "Spencer" has the only Water-jacketed Feed.

"Spencer" grates are raised in the center, having same pitch at which coal comes from magazine, giving an even thickness of coal over the grate, causing the fire to burn evenly and the coal to slide from magazine as required.

It will pay you to discard your old heater, and begin **Saving Money** with a "Spencer." Write for catalogue, also ask for our Greenhouse Catalogue "The House of Greatest Sunlight."

P. O. Address Box 789, NEW YORK CITY

Talks on Greenhouse Material

No. 5.

YOU'LL probably remember that last week we told you about the difference in the painting and the amount of paint required for rough and smooth lumber. It isn't alone the savings on the paint, for we believe in putting on lots of good white lead and oil, as it preserves the wood, but it is the saving on repairs that you want to consider. In our file we have a letter from a customer who built a range of houses just a few years ago and we wish you could come to our office and look at it along with several others. This particular letter, though, is a late one and a very interesting one. It tells of a man who built a range of houses in the same town, and at the same time as our customer did, who bought material for less money than our customer paid. It tells how this same man in a short time took out fifty sash bars that had rotted and bought fifty more. Our customer says he hasn't spent a cent for repairs and that the houses are just as good as they were when built.

Why save \$10.00 on the first cost and spend twice the amount for needless repairs? Figure with us the next time.

JOHN C. MONINGER CO.

CHICAGO

115 E. Blackhawk Street.

Patent Applied For

Why My New Curved Iceless Eave is Far Superior to Anything on the Market Today

- 1st. No sash bars encased in iron, thereby eliminating all danger of bars decaying.
- 2nd. Can be used in conjunction with iron frame construction, thereby doing away with that very objectionable feature, "columns."
- 3rd. Roof bars with drip grooves, which act as conductors to carry away the condensation: **Result**, the driest roof ever used for greenhouse purposes.
- 4th. **THE MOST IMPORTANT OF THEM ALL.** The very small increase in cost over the ordinary style of construction which makes it possible to be used for commercial as well as private purposes.

WILLIAM H. LUTTON HORTICULTURAL ARCHITECT and BUILDER

Everything for the Greenhouse.

Mastica is elastic and tenacious, admits of expansion and contraction. Putty becomes hard and brittle. Broken glass more easily removed without breaking of other glass as occurs with hard putty. Lasts longer than putty. Easy to apply.

It Is Gears of This Make

that make life easier for you florists. So much easier, in fact, that it seems almost incredible that any one of you considers for a moment buying gears with a complicated mechanism of chains, or a series of cog wheel arrangements. This encased, self-oiling gear of ours is simplicity itself, as far as construction goes—and is made so much more carefully and accurately in all its bearings. And as far as price goes, any good thing costs—and it pretty generally works out that it costs a good bit more *not to have a good thing*. In brief, it is a gear of tremendous power and has the special advantage of being particularly easy to erect—and of course, light running; it was designed with that in mind.

But send for the new Ventilating Catalog which fully describes it.

FOR SNOW-FREE ROOFS

Gutters back up the snow—snow casts shade—makes work to remove it. The gutterless, curved eave U-Bar house slides the snow off—no shade—no extra work. This is only one of their strong points—some of the others are simplicity, attractiveness, durability, lightness, great strength, unmatched productiveness, and low cost of maintenance.

The ideal construction for private estates, parks, public institutions and florists' showrooms

Pansy

Famous Strains of Mammoth Mixed Pansies.

S. & W. Co.'s

NON PLUS ULTRA

Our Non Plus Ultra Pansy is a mixture containing the largest, handsomest, most perfect varieties ever sent out. The beautiful coloring and variety of markings give a bed of these pansies a most brilliant appearance. The seed having been saved from the greatest assortment of types, including only the best of Giant Cassiers, Bugnots, Trimardeaux and Giant English, French and German strains. Finest mixed, per trade pkt., 25c.; per 1/4 oz., \$1.50; per oz., \$5.00.

Pansy—World's Best Mixture

WORLD'S BEST MIXTURE

This mixture is the result of careful selection from the very largest and finest pansies of all the varieties; and we can safely say that a better or finer strain it is impossible to get. Per trade pkt., 50c.; per 1000 seeds, \$1.25; per 5000 seeds, \$5.00.

Very Large Flowering Varieties

These are remarkably large Pansies, which, for size of flowers and robust growth, eclipse all other strains. Their range of color has heretofore been limited, but this season we are able to offer several grand new varieties.

Tr. pkt. 1/4 oz. oz.

S. & W. Co.'s Giant Purple	\$0.20	\$0.30	\$1.50

Masterpiece (Germania), superb new class of batched pansies with large blooms, mostly undulated or curled, fine rich colors. Per pkt., 50c.; per 1/4 oz., \$2.25; per oz., \$8.00.			

RAWSON'S Arlington Prize Pansy

This is the cream of all pansies and we are not afraid to claim superiority over any other strain. The colors of this strain are superb, the flowers large and the plants robust. There is hardly a pansy alike and for this reason it should prove valuable for either show or commercial purposes.

1/8 ounce, \$1.25; 1 ounce, \$8.00

**NEW PURE WHITE FREESIA "SNOW-
DRIFT."** Absolutely pure white flowers,
stems, strong, bearing a profusion of large,
milk-white blossoms; early forcing.

Select flowering bulbs, doz., 50c. per 1000
First size bulbs, doz., 1.70 15.00
Mammoth bulbs, doz., 2.00

H. H. BERGER & COMPANY
70 Warren St., NEW YORK CITY

FISCHER'S GRAND PURITY FREESIA

This is the finest Freesia ever offered to the
trade and the only one worth growing. The
flower heads are of very large size, of glistening
whiteness, and of thick heavy substance,
making its keeping quality superior to all
others. The stems, always stiff, can be grown
two feet and over, making this magnificent
Freesia one of the finest decorative flowers.
It can be used entirely alone in this respect
or with other long-stemmed flowers.

The greatest care is taken by us to keep
this beautiful Freesia pure and free from all
danger of mixing, by carefully picking off
all seed pods; not allowing one to ripen and
drop its seed in the ground, where it would
surely grow the next season and work disaster,
as it does not come true from seed.

So, beware of buying stock that has been
increased from seed. You will always find
Purity here in all its purity.

Send to your orders early, for last year
the orders far exceeded the supply. This year
we hope to fill all orders and offer first and
second-grade bulbs for sale.

Send for Price List. Delivery in early July.
RUDOLPH FISCHER, Santa Anita, Cal.

plants; F. B. Vandegrift & Company,
two cases plants. June 5.—J. P. Roosa,
one box plants.

European Notes.

Summer is with us at last in good
earnest and our growing crops are re-
sponding bravely to Nature's call. Tur-
nips (white-fleshed varieties) have ma-
terially improved during the past two
weeks; this remark applies especially to
the field sorts. Of yellow-fleshed vari-
eties, both for table and field use, the
very limited acreage is not particularly
encouraging; the purple topped kinds are
especially short. Rutabagas are mend-
ing, but as it is far too early to detect
canker, a definite report must be delayed
for a few days. Mangels are doing well,
both in northern France and England;
the limited acreage of Mammoth Long
Red will lead to very high prices next
season if the present demand continues.
Sales are now easily effected at an ad-
vance of fully 15 per cent.

The cold and heavy rains have se-
riously injured the sowings of early
Italian onions for the pickle merchants
and a lot of re-sowing has been neces-
sary; this has cleared off a few stray
lots of yearling seed and left a clear store
for next season's crop. At present the
appearance of the onion crop is quite
satisfactory.

The visit of the President of the
French Republic to London has been co-
incident with the famous Temple show
of the Royal Horticultural Society. The
latter has been fully up to the average
of excellence, and despite the increased
charge for admittance (£2.50) on the
first day, was most uncomfortably over-
crowded. The exhibition was reserved
for Fellows only from 7 a. m. to noon
on the 2d day, and this enabled those in-
terested in practical horticulture to ex-
amine the magnificent exhibits in com-
fort. W. Atlee Burpee, who with Mrs.

Stokes Seed Store

219 Market Street, PHILADELPHIA

Burpee has returned to London from their French trip in splendid health, was an interested visitor. While nearly all the British seedsmen were among the exhibitors there was very little of "special" interest to the readers of these notes except sweet peas, and as the latter were all grown under glass, and to a certain extent of color, it must suffice for the present to say that there appear to be a few very good novelties on the way.

The letter re scented cyclamen from Messrs. Vilmorin in your issue of May 16th occasions the writer very much surprise, as it is evident that Messrs. V. A. & Company have read into the notes in question an implication and preconception which they were certainly not intended to convey. No one, least of all the present writer, would charge Messrs. V. A. & Company with such grossly dis-

early promise of most crops has not been on the whole fully maintained; but nevertheless, it seems safe to say that general crop conditions are very much better than they were at this time a year ago. When we seriously consider the very excessive moisture during practically the whole period of the small garden plantings, the fact that on the whole so little complaint has been heard this year so far of seeds not germinating is certainly a most satisfactory state of affairs, and speaks most eloquently for the healthy condition of the seed trade generally. As regards the seed crop prospects for 1909 sales, it is as yet very early in the season, and two or three weeks of good growing weather, which there now seems every indication of having, would work wonders with the growing seed crops.

Speaking generally, seed crop conditions do most certainly now point to substantial prices at both wholesale and retail for another year at least. Until such time as we obtain a genuine old-fashioned "bumper" crop of seeds, rates for seeds will average high—seed stocks now on hand are far too low to admit of any other outcome. The yearly consumption of seeds in this country has reached too great a volume to admit of

The New Seed Warehouse of Wood, Stubbs & Co., Louisville, Ky.

honorable conduct. All that the notes in question affirmed is confirmed by their letter; the omission of the word "grandiflorum" was unfortunate but not intentional.

EUROPEAN SEEDS.

Seed Trade Notes.

With better weather the demand for the general line of seeds for late planting has very materially increased. There still continues a most excellent retail counter business; and as regards the wholesale trade of the larger houses, filling-in orders are being received in excellent volume—in fact, for the middle of June, all branches of seed-selling show much more than average activity. Plant sales still continue in fair amount, although it does look as if another week would end anything like large sales in this line. Those seedsmen who have been making this past season especial efforts to handle large lines of both vegetable and flowering plants, report themselves as more than pleased with the trade accomplished.

June is always an anxious month with the seedsmen, as regards crop conditions. He has two causes for anxiety; for not only is he vitally solicitous that the seeds he has been selling during the past six months shall yield satisfactory crops to his customers, but also that the seed crops planted for the coming year's supply of seeds, shall turn out fully adequate to the sure-to-come demand. There can be no question but that the excessive rains of the past six weeks or so have made for irregular crop conditions, and in this account the unusually favorable

any other result from fairly good seed crops; we need some great seed surpluses to put seeds back in selling prices to the average lower levels of the past decade. In a few weeks now quite close estimates can be made regarding the final outcome of the present growing seed crops.

The Saturday half-holidays, which always begin with June, are giving a well-earned rest to both employer and employee. These week-end recreations, together with the annual vacations of two weeks, which also begin this month, will return us all to work with renewed vim for the coming season of bulb-selling, which is now daily shaping itself for sure-to-be large sales.

Louisville, Ky.

Wood, Stubbs & Company have now moved into their new building, 229-231 E. Jefferson street, Louisville, Ky., of which the above is a photograph. The building is especially well constructed for handling the seed business. The floors are extremely strong and the building is equipped with the most modern devices for quick handling and execution of orders. The first floor has a 15-foot ceiling fitted with prism glass in front and wired glass in the rear, which makes it extremely light. Hanging balconies extend around the parts of the store arranged for display of stock and poultry supplies, insecticides, light implements, etc.

Behind the counters, in addition to 400 drawers, there are 150 bins which connect with three-inch pipes to upper reservoir bins, so that the stocks for these bins are all filled on the second

Room Wanted

ROOM WE MUST HAVE to place our importations of ARAUCARIAS, PALMS, BAY TREES, etc. Therefore, our entire stock of bedding plants must go at astonishingly low prices.

Look! Look! Look!

And just think!

SCARLET SAGE, the best variety in the world—the Clara Bedman or Bonfire, 4 in. pots, which used to sell at \$12.00 per 100, now \$5.00 per 100, or \$15.00 per 1000. No less than one hundred of these at this price.

BEGONIA VERNON, dwarf red and Erfordii, 4 in., 6c.; 3 in., dark dwarf Vernon, 4c.

COBAEA SCANDENS, we have about 1000 nicely staked up, 4 in. pots, about 2 feet high, to close out, 5c. each.

CANNAS, best bedding varieties, red, yellow and pink by name, large, 4 in., \$6.00 per 100.

FUCHSIAS, 4 in., big stock, 6c.

Pure white **MOON VINES**, for which we have a world-wide reputation. 4 in., 12c.; 2½ in., 5c.

Plants, 2½ to 3 in. pots, at only 2c.

Horticultural Notes

Ligustrum lucidum is a handsomer evergreen privet than the *L. japonicum*, beautiful though the latter is. In the mild Winter of 1907-8 it passed through the cold with no injury at all in sheltered positions. It is supposed to be less hardy than *L. japonicum*. The latter is hardy at Philadelphia, and it is hoped *lucidum* will also prove so.

The weeping Douglas Fir, *Pseudotsuga Douglasii pendula*, will be in demand as soon as growing specimens make its worth evident. It is a form of the hardy one, the Colorado variety, so it can take its place with our hardy evergreens with entire safety. European firms, such as Barbiers, are offering it; and specimens already here attest its worth.

Abies arizonica, the cork fir of Arizona, is a handsome evergreen at all times. In early Spring its young growth is almost of the color of the famous blue spruce. As with other cork barked trees, its corkiness does not commence until some years have passed. When it does come it is of silvery whiteness and is "real corky," attesting the appropriateness of its name, Silver Cork Fir. Although from Arizona, it is from the mountains, and is quite hardy in all the Middle States.

One of the handsomest of all azaleas is the flame-colored one, *A. calendulacea*. An old botanist describes a mass of them he saw in flower in North Carolina as looking like "a woods on fire." The flowers are large, and the bush robust growing. They vary in color, some being yellow, others varying to the flame, which seems the normal color. There is no more handsome azalea among all the kinds known.

Paul's Carmine Pillar rose is of striking beauty, and when large plants are in flower their display is dazzling. The flowers are single, of a deep carmine color; and it is a rose ranking among our hardiest. What a treasure such a rose would be were it everblooming!

Deutzia Lemoinei has not found the favor with florists it was thought it would. It is a good shrub, being a larger grower than *gracilis*, and flowering at the same time, but for florists' use *gracilis* still holds first place.

But *Philadelphus Lemoinei* is a grand addition to sweet-scented mock oranges. Its growth is far less robust than *P. coronarius*, the old sweet mock orange, so that when in flower their weight causes the branches to droop slightly and gracefully. The odor of its flowers is most delightful. Some describe it as lemon-scented, others, strawberry-scented. Its perfume is not so heavy as any of the old style mock oranges, and as sweet perfume is pleasing to everyone, this *Philadelphus* will become very popular.

Nurserymen are pushing *Pterostyrax hispidum*, and well they may do, for it is one of the handsomest of little known small trees. Its leaves are large and handsome, and in early June it is always a picture with its innumerable racemes of white flowers. The racemes are about a foot in length, and are formed like an inverted candelabrum. After a while, when the small trees now being sold flower, many will regret their not having planted one years before.

Viburnum Lantana is a very early blooming shrub. Its flowers are white, in flat heads, appearing in the first days of Spring. If the flowers were all its attraction it might be no better than some other shrubs, but berries follow which ripen quickly, and their red color adds much to the attraction of the bush. Besides its hardiness, its well doing everywhere and its beautiful foliage, the *Rosa rugosa* is the first of all roses to flower in Spring, or at least it is in a collection here where numerous sorts are grown. And then what a display its large seedpods make with their bright red color in the late Summer! There are many hybrids of it, but florists and nurserymen say the call is for the old typical forms, the red and the white-flowered first of all.

Kalmia latifolia is such a handsome hardy evergreen that it is a pity to see it so often planted in situations unfitted for it. Those who have seen it in its wild state will say it grows in loam and decayed leaves, in well-drained, but damp soil, and in shady places. If ever in open exposures it is because of the clearing away of trees or shrubs that have been around it. Its flowers come soon after cultivated rhododendrons and azaleas are over, when they are greatly appreciated. Although shade is natural to them, if suited in all other respects, they will grow in an open position.

The Double-Flowered Spiraea Reevesii Among the many useful and beautiful spiraeas of Spring is one of the oldest of our cultivated sorts, and which in the rush after newer ones is being overlooked, the *Spiraea Reevesii* double. There is no gainsaying that, one thing with another, *Spiraea*

Van Houttei is hard to equal, but in some respects *Reevesii* double is better. It is superior in the lasting quality of its flowers. The single flowered *Reevesii*, the *Van Houttei* and, in fact, all the early blooming species are out of flower before the double *Reevesii*; and as to its beauty, everyone knows how lovely it is when in full expansion of flower. The present season is an early one with us; lots of rain followed by heat brought along flowers at a rapid rate, so that by the 28th of May all the spiraeas named were out of flower, excepting the one to which these notes particularly refer, *S. Reevesii* double. It is still in good condition; and how lovely are its sprays of pure white double flowers!

It certainly should be more grown and given more prominence by nurserymen, attention being called to it in their catalogues. The *Spiraea Reevesii* is now properly called *cantonensis*, but nursery lists still keep up its old name, the one the nurserymen all grow up to call it.

Plants of all sorts bearing their natural single flowers are esteemed the most by a large number of folk, but double flowers are always the most lasting, and often the most beautiful. There are the two crabs, for instance, *Pyrus coronarius*, with its single flowers, and *P. toensis*, Bechtel's double flowered, and how much the latter is superior to the *coronarius*! This Bechtel's crab is a natural product, too, as much as the single one, and so are many other double flowered trees, shrubs and flowers.

central vase. It is in one of our large parks, where space is no way limited, hence the bed is 40 feet or so in diameter, making a great display when the plants were at their best. The center of the bed contains assorted cannas, which, with their large foliage and tall flowers, make a good center. Next to these come a thick planting of scarlet sage, and all who are familiar with bedding know how effective scarlet sage is when it has the large green leaves of the canna behind it, and this bed when in its prime certainly proved the wisdom of the planting. The third, and what might be called the outside row, was the well known blue ageratum. It seems hard to find a good blue-flowering plant to take its place with our bedding. The ageratum seems the best obtainable, but no one can say it is as good as could be desired. There was an edging of pansies to this bed, and because of the late, cool Spring the plants were in good condition even as late as when cannas were blooming, but when the bed was planted it was the thought that they would be out of flower and overlapped by the ageratum by the time Summer set in.

This bed is in Fairmount Park, Philadelphia, and just beyond it stretches the famous sunken garden. A bed of similar character to this one is on the other side of the sunken garden, a flight of steps leading down from each bed across the sunken garden and rising on the opposite side.

The two large trees are of the avenue of European planes, which line the garden, an avenue now the best

Bed of Cannas, Scarlet Sage and Ageratum.

Mulching Between the Rows

Mulching between the rows of small plants has been so often spoken of and its benefits so often verified, that its advantages are believed in now by everyone. Young evergreens, roses and similar plants the roots of which are but a few inches under ground, are immensely benefited by being mulched, the mulch creating all the needs of the plants to make good growth. There is coolness, moisture and an open surface of soil all Summer long, and all brought about without the use of a cultivator or a hoe. With many surface rooting plants a mulch is far superior to a hoeing, as the latter process injures many roots. In some European countries many small fruits, such as the raspberry, are grown without disturbing the soil at all, a heavy mulching of hay, straw, lawn mowings or leaves taking its place, and how the fruits thrive under the treatment!

As is well understood, such evergreens as the rhododendron and the *kalmia* have small roots formed near the surface of the ground, and to these mulching is particularly agreeable, both in Summer and in Winter.

With most trees and shrubs roots go down tolerably deep in time, where they find what moisture they require, hence mulching is not of as much advantage to them as it is to those the roots of which are near the surface. It is the surface rooters and the small plants of evergreens and other stock that mulching is advocated for; and the best time to apply the mulch is as soon as the Spring's planting is finished.

Bed of Cannas, Scarlet Sage and Blue Ageratum

Our illustration represents a large, round bed of plants made into four beds by the grass walks which run through it to the

of its kind in the State, the trees being exceedingly good and of uniform growth.

JOSEPH MEEHAN.

Registration of New Dahlias.

The New England Dahlia Society will hereafter recognize only new varieties which have been duly registered with its secretary. No charges will be made for registration and it is desired that a thorough description may accompany all such requests for registry. The society reserves the right to reject any name so offered, especially if any should be found to be already existing, even when applied to a different type. It is our aim to endorse only those new introductions, which give evidence of superior merit. The *Dahlia News*.

It seems to us that this segregation of endeavor along the line of registration of new plants is to result in more harm than good. Concentration of effort is what is desired; and we hope the day is not far distant when our suggestion that the Bureau of Plant Industry at Washington, D. C., take charge of all plant registration matters in the United States, shall become an established fact. Operating in harmony with that Bureau, the various special societies and the S. A. F. O. H., itself could render valuable service, to the end that the registration of new plants in this country be put on a workable and reliable basis, so that the lists to be published shall become, in very fact, an index of the progress of horticultural development in America, and a safeguard and guide to all who buy and sell plants.

In the meantime, we hope that lists of the new plants registered by the various special organizations will be furnished the secretary of the S. A. F. O. H. for inclusion in the annual report of our principal national society. This for convenient and handy reference.

The Wittbold Watering System
FOR GREENHOUSE AND FIELD WATERING
A simple and effective device which is easily installed by a boy in the greenhouse or outdoors.
Installed at small cost. Is a permanent investment. Never wears out. Pays for itself in hose and labor in a few months.
Try it on a line of pipe. A swivel wheel and 20 nozzles costs only \$5.00 and will show exactly how valuable a complete equipment would be to any florist or vegetable grower.
Can Be Seen in Use At
Vaughan's Greenhouses, Western Springs, Ill., Geo. Wittbold Co., Chicago; A. Ahten, New Orleans, South Bend Floral Co., South Bend, Ind.; Davis Bros., Morrison, Ill.; W. B. New York. News of the Week.

We are having a taste of real Summer weather at last. It is warm enough for anybody just now, and too warm for many of the flowers that are sent to the market.
The outing of the New York Florists' Club, which comes off on Wednesday, July 1, promises to be quite a successful event and as well patronized as any of its predecessors. The committee is going to try and have all the races run on the grass at the Grove, where there will be room for every competitor in each race to run at the same time. This is an innovation that will meet with the approval of all and will save a lot of time.
The members of the Bowling Club are working hard every Friday night, but it does not seem up to the present time that Mr. Traendly will have to pay the expense of many of them to the Convention in August. So far, J. A. Mauda is the only one who has averaged 155; consequently, it looks now as if Mr. Traendly will have only one ticket to buy for the New York bowlers.
The New York and New Jersey Plant Growers' Association will hold their first annual excursion on Thursday, June 25, at Staten Island.
The many friends of James Shanley, the well-known Brooklyn florist, will be grieved to hear of his unexpected death. A more extended notice will be found in our ordinary columns.
George Linsdale, who for many years has conducted a florist store at Thirty-fourth street and Lexington avenue, died on Sunday last at the age of forty-three years. He leaves a wife and two children. We understand that the business will be continued by the family.
John Wolmers, florist at Twenty-fifth street, Brooklyn, is, we are sorry to say, confined to his home through sickness.
The annual June exhibition of roses and strawberries of the Tarrytown Horticultural Society was held in the Music Hall, Tarrytown, N. Y., Friday afternoon and evening, June 12.
Harry Van Koolbergen of Boskoop, Holland, sailed for home May 26, after a profitable tour of the country. He informs us that every plant of their vielet blue rose was sold. Mr. Van Koolbergen will be married to Miss Anna de Jong of Leiden, Holland, on June 16.
U. G. Scollay, manager of the firm of J. A. Scollay, horticultural engineers, Brooklyn, is attending the annual convention of the Master Steam and Hot Water Fitters' Association in Boston, Mass. Headquarters of the association are at the Hotel Brunswick of that city. Mr. Scollay is vice-president of the Master Steam and Hot Water Fitters' Association of New York.
Thieves have stolen a number of rhododendrons from the collection presented to Central Park by Mrs. Russell Sage.
The Brandt-Hentz Flower Company has been incorporated under the laws of New Jersey to deal in cut flowers, plants and nursery trees and to do a general decorating and landscape gardening business. The company will pay special attention to the wholesale flower trade. Henry Hentz, Jr., is president; Ellwood

VEGETABLE PLANTS

CABBAGE, Winningstadt Per 100 \$0.40 Per 1000 \$3.50
TOMATOES, Selected varieties. 0 10 3 50
All transplanted plants. Cash with order.
S. G. BENJAMIN, Fishkill, N. Y.

Brandt, treasurer. The principal office and greenhouses of the company will be at Madison, N. J. Mr. Hentz is well known for his success as a grower of roses; Mr. Brandt is also a successful florist, and is the present owner of the property and greenhouses at Turnpike road, Madison, which will be acquired and extensively improved by the new company.
Richard Vincent, Jr., of White Marsh, Md., paid this city a flying visit on Wednesday; the firm making an exhibition of geraniums at the rose exhibition at Bronx Park.
Ant. C. Zyolank of Bound Brook, N. J., the Winter-flowering sweet pea seed specialist, left this city Monday last on his annual California trip.

Washington, D. C. News Notes.

The Florists' Club of Washington met on the night of June 2 at Scotch Rites Hall, 1107 G street, N. W.
June weddings are on, and the benefits therefrom are being felt by the trade generally. J. H. Small & Sons had the Williams-Lotter wedding on the 10th inst., a home wedding with subsequent reception at Rauscher's. The reception hall was decorated with stately palms, Easter lilies and white peonies, and the breakfast table with Killarney roses, white and pink peonies and palms.
The condition of Mr. J. H. Small, who has suffered two strokes of paralysis, remains unchanged. He is still confined to his bed and keeps a trained nurse.
Increasing interest each year seems to be manifested in the decoration of Confederate graves in Arlington and the ceremonies connected therewith. Sunday, June 7, was chosen for the occasion this year. Probably the most notable feature was a speech by Gov. Robert B. Glenn of North Carolina, who paid flowery tributes to the soldiers of both armies participating in the Civil War. The Southern Cross, an immense floral tribute, was unveiled, while a living cross, formed of young ladies dressed in white with red sashes, attracted much attention. The flowers used in subsequent decoration of the graves were not costly, but liberally bestowed; many of these came from Washington florists, several of whom also contributed.
Walter Gordon has sold his retail store at 9th and Grant place to F. H. Kramer; it will be run as a branch to 914 F street.
The Florists' Club has for some time been discussing the Sunday closing law for local flower stores. There are opinions each way and widely divided. Wm. F. Gude has been appointed chairman of a committee to call a special meeting of all club members to vote on the bill.
JAS. L. CARBEY.

JOTTINGS FOR FLORISTS

BY EDWIN LONSDALE

Rose White Killarney Here is an extract from the London Gardening Illustrated for May 30, 1908, the very same day I had something to say on the original Killarney, which will no doubt be of interest to your readers:

American growers announce a white sport of Killarney, which will be put on the market next year. From a florist's point of view, especially for indoor culture, this variety will undoubtedly command a ready sale, for the old Killarney is one of the best Hybrid Teas for this purpose. It is also a good variety for outdoors, the only fault one can find with it being its susceptibility for mildew.

Saintpaulia ionantha The common name for this gesneraceous plant is African violet, and it comes by same naturally; not that it is in any way closely related to the viola family botanically, but in form and coloring it is as nearly the old style form of the typical violet as it is possible for any flower to be, whether it belongs to the same natural order or not.

According to George Redles, the secretary and treasurer of the Germantown Horticultural Society in an address before the Florists' Club of Philadelphia last Winter, it is one of the most satisfactory flowering plants for window gardening that we have in the whole list of suitable plants for that critical purpose. It is propagated both by seeds and leaf cuttings. After the cuttings have been put into the sand care must be exercised not to give too much water, or they are liable to decay. It is a very interesting plant and ought to be more plentifully found in the trade.

Crotons The second week in June is generally considered early enough for the planting outdoors of crotons—or, to be scientifically correct, we should write codiaums, but the trade name of croton will be recognized as the only name for some time to come—but owing to the weather conditions prevailing about Philadelphia being so favorable I could not resist the undertaking of running some risk and up to this writing I have no regrets. Not only were the weather conditions all that could be desired for outdoor planting, but a modified plan in preparing our stock of crotons was put into operation this year, and helped along with our work. The bulk of the croton plants used in our operations are the result of our arrangements the past Winter's propagation. The plants from which we take our cuttings are those that have done duty during the preceding Summer for outdoor decoration. After they have thoroughly recovered from the lifting and grown some cuttings are taken therefrom, the first of which for the present season's supply were made December 11, 1907. The propagating house where crotons are rooted is kept at a minimum night temperature of from 70 to 75 degrees, or about the same temperature as the croton house proper is kept at. Our propagating house is narrow, only twelve feet wide; a walk is in the center and beds are on each side, with steam heating 1½-inch pipes beneath. Under a part of our arrangements the heat is confined by boarding up the sides, thus naturally intensifying the bottom heat, whereas the remainder of the propagating bed is left open without any restrictions whatsoever, and the cuttings rooted equally well, with little or no apparent difference in time of same, and none whatever in the results, as practically ninety-nine per cent. rooted under both conditions. Our forefathers had a strong belief that bottom heat for propagating or increasing stock was absolutely necessary, but with our modern methods we can do just as well without it as with it. This, of course, only applies to stock easily propagated.

These cuttings that were put into congenial quarters first were rooted and in line shape for potting on January 6 of the present year. They were potted into 4-inch pots, when they remained until

they were planted outdoors last week. Heretofore we have been in the habit of re-potting our crotons into 4-inch pots sometime during the month of March. The plants we had this year were large enough for all practical purposes, and here is a point well worth considering in this connection—of what use is it taking the time to re-pot into the larger size of 4-inch pots when plants large enough for our purpose may be grown in 3-inch pots and consider the time saved in the planting? All those who have handled a trowel will appreciate this to its fullest extent. How few less movements are necessary in the planting of the smaller sized plant than the larger.

Cuttings of crotons may be propagated as late as February and March and make excellent material for the class of work under consideration, and especially does this apply to those varieties which are the most suitable when used for the edgings of beds, and for such purpose *Weismannii* is the very best that has so far come under my notice. It has long, narrow leaves and its manner of growth is short jointed, and in general coloring effect it is a bright yellow.

The growing of crotons for bedding purposes is very economical as to the space occupied by individual plants. The greatest expense is in the maintenance of the requisite heat to cause them to grow freely. Heat and moisture are the great requisites of the croton. Insects may be kept at bay by persistent use of Tobacco liquid solution with soapy water. Once a week, carefully applied, will keep the plants as clean as possible.

THE WEEK'S WORK

Timme's Timely Teachings.

Cinerarias.

Seeds of *Cineraria hybrida* started at about this time germinate most readily, and with proper attention to the requirements of the seedlings during the warmest months of Summer, are least difficult to work into good stock for next year's early Spring and Easter sales. Use fresh seeds of the best strains to be had, sow on leaf-mold, plentifully intermixed with clean, sharp sand, place the trays in a cold frame. Keep moist and shaded, but let the sashes be raised a few inches from the start, unless unusually cold winds and weather compel their being tightly closed for a time. When the seeds are up lay off the sashes on rainless, pleasant nights altogether. Time to transplant is after the seedlings have developed their third leaf. This may be a potting up with several shiftings into larger pots to follow during their course of growth, or a planting at proper distances—say seven or eight inches between plants—into the nicely prepared soil of a frame, where, conveniently protected against heavy rains by the sashes, kept at handy reach, as also by screens against too fierce a sunbeats, they will attain good size and strength by the close of September. The plants are then carefully lifted and potted up into soil, somewhat heavier in texture and richer in fertilizing matter, are held close for a few days and kept in frames as late in the Fall as possible until the protection from frosts, afforded by these, becomes insufficient for their safety. They are then removed to a well-lighted bench in one of the coolest, airiest greenhouses. Here the cineraria's greatest foes, frost and a high temperature, either of the two, must be kept at a distance.

Mignonette.

Seeds for the principal crops of Winter-flowering mignonette, to be used or sold in a cut state, are sown in August and on some places as late as the last week in September. Successive sowings, two or three, from now until then result in a supply of flowering plants in pots from early in the Fall until the beginning of the new year. It is stock that sells good, and where a call for potted plants in variety is certain to be an every-day occurrence at that season, potted mignonette should not be missing in the stock offered. Unless transplanted when very small, the seedlings object strongly to being disturbed in that manner, and suffer a set-back that keeps up its tell-tale to the finish. Starting the seeds in the usual way in trays is therefore not what leads to best results. We sow a pinch of seeds at once in the pots in which the plants are flowered and sold, filling them but three-fourths up with soil, adding the remainder after the seedlings are somewhat strong, and have been thinned down to one or more of the strongest. All manner, if it is old enough to be handled like soil, to which a fair proportion of sand is added, is what we use in the growing of pot mignonette. Press it down firmly, let it become rather dry before every watering, start the seeds under glass, but never shut out the air, nor the light or sunshine after the plants have begun to make headway. The symmetrical bush form is most acceptable, next to this the more rigid and heavily flowered pyramid, and least profitable, because most expensive in labor and time, is the painstakingly trained standard. When mignonette shows bloom buds too soon for your trade, pinch back and it will flower later.

Adiantums.

Bench-grown maidenhair ferns need a rest after the last heavy cut of fronds in Spring. They should, however, even during this period of inactivity, never be wholly denuded of mature frondage or be ever suffered to become dust-dry at their roots. Withhold water to the extent of dispelling acidity from the soil which, as employed in the culture of ferns, sours only too rapidly. Stir the surface, while drying out, to a reasonable depth, adding nothing to its bulk during this period, but freely admitting air, light and sunshine. Under these conditions the new growth is slow in coming, but when finally it appears it is

ORCHIDS

The following freshly imported **ORCHIDS** to hand in superior condition:
CATTLEYA TRIANAE. This is the second consignment this Spring; a third one due shortly. Type superior to anything on the market
CATTLEYA LABIATA. A second lot just in, in fine shape.
CATTLEYA PERCIVALLIANA. Superior type.
CATTLEYA GASKELLIANA. A fine lot just in.
 Also **CATTLEYA MOSSIAE, VANDA COERULEA, DENDROBIUM FORMOSUM, D. THYRSIFLORUM, ONCIDIUM SPLENDIDUM,** etc., etc.

strong and abundantly in evidence, thus proving the good the short spell of rest has done on the plants, and the advisability of holding on to them for another season. Unless benched *Adiantum emarginatum* or *Croweaum* shows this renewed strength in unmistakable form, its being carried over for another year as against replanting with new, vigorous stock would not win out for the grower. If the stock shows deterioration rather than partial exhaustion, the death-dealing effects of fungus and red-spider attacks, is hopelessly enfolded for further production, throw it out; thoroughly clear and cleanse the bench; prepare fresh, new soil, more of a turf-like, coarsely broken up, gravelly character than containing the usual over-measure of leaf-mold; drain the bench well; do not firm the soil any more than is unavoidable in planting; set out clean, strong plants, coming out of three-inch pots; water sparingly but spray often; keep the house well ventilated but guard against strong currents of cold air and rather lessen than increase the density of the shading. **FRED. W. TIMME.**

discount of 10c., 15c., 25c., or 35c., per inch on contin-
uous advertising. For rates on Wants, etc., see column
for Classified Advertisements.

Annual Convention American Association of Nurserymen

Milwaukee, Wis., June 10-12, 1908

The thirty-third annual meeting of the American As-
sociation of Nurserymen was held in Milwaukee June 10,
11 and 12, and was largely attended.

The report of the Treasurer showed a balance on hand
of nearly \$3,000. The Committee on Legislation re-
ported a favorable decision in a test case brought in
South Dakota to try the validity of the nursery inspec-
tion law recently enacted in that State. While some
sections of the law were sustained, the provisions most
troublesome to nurserymen, such as furnishing bond and
references as to integrity and responsibility, have been
eliminated. The committee also recommended bringing
test cases in Oklahoma, Wyoming and Wisconsin.

Col. C. L. Watrous, on behalf of the committee ap-
pointed to co-operate with official entomologists, reported
that the joint committee had adopted resolutions asking
Federal legislation on inspection of imported nursery
stock on issuing uniform certificates of inspection to all
States in the Union, and on asking the Secretary of
Agriculture to take steps to control insect pests.

Mr. Orlando Harrison, chairman of Committee on Na-
tional Inspection Law, after reviewing the various steps
that had been taken in the past to secure such a law,
all of which proved futile, recommended that further ef-
forts in that direction be abandoned, with the exception
of trying to secure Government inspection of imported
stock. The recommendation of Mr. Harrison was unani-
mously adopted.

The Committee on Transportation, through F. H.
Stannard, chairman, reported fewer delays, more claims
settled promptly and more satisfactory service this year
than in the past.

The Committee on Mutual Insurance reported that
owing to adverse legislation, this plan of insurance was
not found practicable.

The following officers were elected: President, Chas.
J. Brown, New York; vice-president, C. M. Hobbs, In-
diana; secretary, George C. L. Seager, Rochester, N. Y.;
treasurer, C. L. Yates, New York; executive committee,
J. H. Dayton, E. M. Sherman, H. B. Chase, J. W. Hill,
Geo. C. Seager.

The Rose Show at Bronx Park, N. Y.

The Summer meeting of the American Rose Society
and a regular meeting of the Horticultural Society of
New York was held on Wednesday afternoon, June 10,
in the Museum Building, New York Botanical Garden,
Bronx Park, New York. There was also an exhibition
of roses given by the joint societies. It was expected
that, for the American Rose Society, Mr. W. C. Barry
of Rochester, N. Y., would give a lecture on outdoor rose
culture. Unfortunately, Mr. Barry had a prior engage-
ment at Milwaukee and could not be present. The meet-
ing of the Horticultural Society was presided over by
Mr. Patrick O'Mara, who announced that, at a meeting
of the council held that afternoon, it had been decided
to hold an exhibition of flowers and plants in the Mu-
seum of Natural History, Central Park, on November
17, 18 and 19 this year. A committee had been ap-
pointed, consisting of secretary of the New York Flor-
ists' Club, John Young, and President of the S. A. F.
Frank H. Traendly, together with other members from
the Horticultural Society, to arrange for the exhibition
and to add to their numbers as a committee as they
thought fit. With the exception of voting one new mem-
ber into the society—Mr. H. H. Lesley of Pittsburg,
Pa.—this was the only business transacted, and Chair-
man O'Mara introduced Mr. L. Barron, who gave an il-
lustrated lecture on roses. The speaker dealt chiefly
with outdoor roses, the object being principally to show
the usefulness and long-flowering qualities of the roses
when the various types are taken into consideration. He
showed by pictures thrown on the screen that, with care-
ful selection of species, an abundance of flowers could be
had five months in the season. The lecture was thor-
oughly enjoyed by every one present.

On the exhibition tables J. H. Troy, nurseryman, of
New Rochelle, N. Y., staged a rather comprehensive col-
lection of outdoor roses, each variety being tastefully
arranged in some receptacle which showed off the adap-
tability of the rose as a cut flower. Some varieties were
in plaques, some in vases and some in baskets of various
shapes, about forty-five varieties being represented.
Among some of the varieties in this exhibit were Kil-
larney, Mme. Caroline Testout, Kaiserin Augusta Vic-
toria, Baroness Rothschild, Fisher Holmes, Victor Ver-
dier, etc.

F. R. Pierson of Tarrytown, N. Y., showed a collec-
tion of outdoor roses, among which were Frau Karl
Druschki, Mrs. Sherman-Crawford, Dawson, Climbing
Rubra, a new red one, Gardenia, Carmine Pillar and
Leuchtenstern. Mr. Pierson also staged a very nice
exhibit of peonies, among which were Modeste Guerin,
a bluish white; Marguerite Gerard, light pink; Victor
Hugo, cerise; Marie Lemoine, cream white; Mme. Emile
Galle, a light pink; Mme. Crousse, a light pink; Mme.
Chaumy, a pure pink; Couronne d'Or, General McMahon,
large red, and Claire Dubois, an anomone-flowered var-
iety, pink and white in color. Mr. Pierson also made
an exhibit of cut sweet peas.

Lager & Hurrell of Summit, N. J., staged orchids in
flower, and Dr. Van Fleet, of the Rural New Yorker,
showed a collection of roses, among which was a nice
red variety, the result of a cross between Rosa rugosa
and H. P. Victor Hugo.

W. A. Manda of South Orange, N. J., exhibited a col-
lection of Wichuraiana roses.

Harry Turner of Castle Gould, L. I., N. Y., showed
three vases of Malmaison carnations—two red ones, Mrs.
Trelawney and Lord Welby, and a white variety, Calypso.

Richard Vincent, Jr. & Sons Company, White Marsh,
Md., made an exhibit of geraniums of the newer varieties,
about thirty-three sorts being staged. The weather had
been so hot, however, that the flowers did not do them-
selves justice.

The judges' decisions of the exhibition had not been
announced when we went to press.

IN THE CITY MARKETS.—There is a door down on
Washington street, in the market section, before which
there is always hanging a brace of plump yellow braids,
spliced tightly together and suspended from a nail, says
the New York Sun. When these braids first strike
your eye you are apt to wonder if you have struck the
headquarters where the Marguerites and all the other
heroines who are supposed to glory in abundances of
yellow hair get the tresses necessary for their parts.
When you get a closer look at the display you find that
you have not. The individual strands of these braids are
pretty coarse, too coarse even for a stage wig, and the
man who runs the place tells you that the stuff is raffia,
an imported vegetable fiber that the marketmen use to
tie up bunches of asparagus. When he adds that the
wrapper is rendered supple for use by a free soaking in
water, the last resemblance to artificial locks disappear:
no imitation, even for stage purposes, would stand for
that sort of thing. Why is this raffia masqueraded in
the guise of real braids?—simply because it is shipped
handiest that way from France, or wherever it happens
to be prepared, that's all.

Inauguration of the William Scott Monument Fund

Two sincere and warm friends of the late lamented
William Scott have at this writing and since we last
went to press, emphasized their desires to see a monu-
ment erected to his memory by depositing with The
Florists' Exchange substantial checks to be used toward
that end.

A monument to William Scott, whom we all knew and
whom we all loved, to be erected to his memory through
the contributions of his brothers in the profession, would
certainly be a most graceful act, and one of which we
heartily approve, and we will willingly become custodian
of such funds as may be placed in our hands for that
purpose and co-operate with any committee which may
be founded later to formulate designs and see to erection.

If all who wish thus to pay final honor to his memory
will send in their contributions promptly, same will be
acknowledged in these columns, and the memorial of love
and respect quickly assume visible proportions. Remit-
tances of small amounts will be fully as acceptable as
the larger checks. We beg to acknowledge to date the
following contributions:

J. McHutchison, 17 Murray St., New York.....\$10.00
John Birnie, West Hoboken, N. J..... 5.00

Editor Florists' Exchange:

The suggestion of your correspondent "S," in last
issue of The Florists' Exchange, to have a monument
erected over the grave of the late William Scott, of
Buffalo, N. Y., will, I am sure, appeal to our American
florists and those of allied interests, as being a most ap-
propriate method of paying a last tribute to the memory
of this illustrious florist. Mr. Scott was known by a
large percentage among the craft and respected by all
with whom he came in contact. His writings and his
speeches helped many a struggling man, and those who
were fortunate enough to enjoy his friendship had a
true friend ever ready to help them or to give his power-
ful assistance to any good cause. The monument pro-
posed need not necessarily be an elaborate one. To star
this fund I enclose a check for \$10. I have made the
amount small as I know there are many who wish to
contribute.

Yours truly,
J. McHUTCHISON.

Editor Florists' Exchange:

I am glad to see you have promptly acted upon the
suggestion of your correspondent "S," on page 744 of
The Florists' Exchange. I think, with him, "William
Scott deserves some recognition and gratitude at our
hands." William Scott was a man of whom any pro-
fession might justly be proud, and we will be doing our
selves honor by honoring his memory. He was essen-
tially a self-made man, self-educated and, by his own
efforts, attained fame and distinction to a degree which
is seldom reached by the working florist. His intellec-
tual abilities were extraordinary; he was a ready speaker
and always spoke convincingly and to the point; his
writings were comprehensive and instructive; his dic-
tion would have done credit to a college professor; his
genial and dominant personality made him loved and ad-
mired by all who came in contact with him, and yet
withal, he was absolutely without affectation and never
suffered from the "swelled head." This I can say after
a personal acquaintanceship of 35 years. As "S" re-
marks, the proposed monument or memorial need not be
elaborate; simplicity will be more consistent in a mem-
orial to William Scott than display. That the effort
will be a success there is no room to doubt, and the con-
tribution of the "mite" is a foregone conclusion. The
veterans in the profession will, I am sure, respond. Many
of William Scott's warmest friends and admirers have
"crossed the Great Divide," but their sons will, no doubt,
feel it to be their duty to do what their fathers would
have done.

JOHN BIRNIE.

Editor Florists' Exchange:

I cheerfully concur in the idea of your correspondent
"S," who suggests a "monument to the late William
Scott." I believe that hundreds of florists throughout
the country would be glad of an opportunity to con-
tribute toward such a testimonial to one who in life was
foremost in all such undertakings himself, and whose work
in the interests of floriculture was of incalculable value
to all engaged in the industry. An opportunity to show,
in some measure, our gratitude and appreciation of Mr.
Scott's good work and kindly interest in his brother
florists would, I believe, be most cheerfully responded to
by his many friends in the trade.

J. F. SULLIVAN.
Detroit, Mich.

PAMPHLETS RECEIVED.

SWEET POTATOES is the subject discussed by W. R.
Beattie, Assistant Horticulturist, Bureau of Plant In-
dustry, Department of Agriculture, Washington, D. C.,
in Farmers' Bulletin 324. The bulletin gives simple cul-
tural directions covering production, both for home use
and market, including the soil and its preparation, the
propagation of the plants, planting, harvesting, storing
and marketing, together with the uses of sweet potatoes
for stock feeding and similar purposes. A list of var-
ieties is also furnished. The bulletin is illustrated, and
will be found of much service to all interested in the
subject with which it deals.

Reduced Rates for the S. A. F. Convention.

The Trunk Line Association covering points in the States of New York, Pennsylvania, New Jersey, Delaware, Maryland and part of Virginia and West Virginia has granted a rate of one fare and three-fifths for the round trip on the certificate plan to those desiring to attend the convention. Other associations have not as yet granted any concessions. Other particulars will be announced later.

W. N. RUBO, Secretary.

Missouri Botanical Garden, St. Louis.

When Shaw's Garden was opened on Sunday afternoon, people who visited were impressed with several changes from the conditions that they last saw. The building originally known as the Casino, and built as a restaurant, opposite the north gate of Tower Grove Park, and which since Mr. Shaw's death has been used as a residence for pupils studying gardening, has been torn away, and, although the continued rains have prevented the superintendent of the garden from grading and planting the place where it formerly stood, it can be seen that as soon as this has been done and the trees and shrubbery brought out to the street the appearance of the corner is going to be greatly improved. The old Shaw mansion, removed from Seventh and Locust streets sixteen years ago, is also beginning to assume different proportions, through the addition of a fireproofed extension about 110 feet long, which has now got up to the first story and will rapidly grow through the Summer. The stone wall which formerly separated Mr. Shaw's pleasure grounds and vegetable garden from the meadow to the south has been taken away, so that the garden now runs continuously with Tower Grove Park, except for the intervening street, Magnolia avenue, which has been so fully blocked off by trees and shrubbery as to leave nothing indicating its presence except an occasional telegraph pole or glimpse of a street lamp through a break in the green.

Seven years ago this tract of twenty acres was planted in accordance with the best of landscape gardening plans, to represent, by means of a natural open park, the types of North American vegetation. Thrown open to the public a year ago, this North American synopsis will be new to most visitors. The 1,500 or more kinds of plants that it contains are distributed naturally over a beautifully molded piece of ground, diversified by brooks, ponds and shrubbery which look as if they had always been there. Every year, with the growth of the trees, this part of the grounds is destined to increase in attractiveness as well as interest.

Adjoining this new addition, and snuggled away so as not to intrude into the park-like effect, is a collection of about 325 plants used in medicine, grouped according to their physiological action, and constituting one of the largest medicinal plant representations in the country. To the north of that, equally prevented from intrusion into the general picture, is a trial ground filled with farm plants, honey plants, savory herbs, etc., and about 2,000 kinds of plants for which use has not been found elsewhere in the garden. In the two or three years since these trial grounds were started, they have proved of more interest, perhaps, to visitors from the country than anything else about the garden.

The flower garden itself is now in an attractive condition. The rains of the Spring have kept the grass and foliage fresh, the roses are at their best, the yuccas are beginning to bloom, and the flower beds are already showing promise of what they are to be during the Summer, while one or two mosaic beds of fleshy-leaved plants show how attractive patterns can be worked out with even the most formal of plants.

As usual, the collection of agaves, or century plants, which is one of the largest in the world, is hedged out through the Summer at the west of the planthouses, and one of the smaller kinds is preparing to bloom. Though the large pond lilies are only to be seen in the Summer, some of the smaller kinds are already flowering, and a beautiful clump of white Japanese iris forms a pretty background for one of the smaller lily ponds, while another is flanked by a diminutive cat-tail now in fruit and looking very different from the big wild cat-tail of our marshes.

The little cactus house, in which the wonderful range in form that cactuses show is well exemplified, is certain to attract attention, like the adjoining tower in which tender yuccas are planted, and the acacia house which opens off of this.

The hothouses have seldom been more attractive than they are now. A vanilla vine, with both flowers and fruit, the goose-flower, many kinds of showy orchids, a dainty wall draping of clerodendrons, with brilliant red flowers set in a pure white calyx, and the usual number of variegated plants, give color and interest. In the temperate house, a special little enclosure has been made in which is a very well-grown collection of sundews and other insect-eating plants, supplementing the collection of East Indian pitcher plants hanging from the rafters of the houses, and the little vestibule at the north of this house is flanked by the curious sensitive plant, the leaves of which close at even the slightest touch.

The Retail Florist Association of the Borough of Brooklyn.

Editor Florists' Exchange:

I wish to enlighten the wholesale as well as the general florists' associates of the city of New York, also your valuable paper, that the so-called Retail Florists' Association of the Borough of Brooklyn, city of New York, is an organization formed for the purposes of bettering the trade, sociability, and a standard time for closing; and not to do harm or cause bitter feeling to any one. Every retailer doing a legitimate retail florist business in the Borough of Brooklyn is cordially invited to become a member and is assured of a square deal. Our next regular meeting will be held at our rooms in the Imperial, on June 22, at 9 p. m. sharp, at which we cordially invite your representative to be present.

WM. A. PHILLIPS, Secretary.

Designed by the Frankford Flower Shop, 1129 Frankford avenue, Phila. Walter L. Bartzell, Proprietor.

The material was composed of 100 Sweet Peas, 50 Lily of the Valley, 4 Smilax, 50 Cannas, 30 Roses, 100 Ferns, 25 A. plumosus, 3 yards Ribbon, 24 Gold Letters, Frame, 3 ft. 6 in.

James Shanley.

James Shanley, the well-known florist, who for eighteen years has been located near Greenwood cemetery, Twenty-fifth street, Brooklyn, died after a brief illness from Bright's disease in St. Mary's Hospital on Thursday, June 4, and was interred in Holy Cross, Flatbush, on Saturday, June 6.

Mr. Shanley at the time of his death was sixty-two years of age. He was born in County Lough, Ireland, in 1846. After learning the trade of a gardener, he came to this country while still a young man and secured employment on an estate at Bridgeport, Conn., subsequently going to Queens, L. I., and taking a position with Hahocks, seed growers of that place. Leaving the Hahock place after a short stay, he accepted a position with J. Condon, the well-known Greenwood florist, with whom he stayed several years. About eighteen years ago Mr. Shanley went into business for himself, building greenhouses on leased ground on Twenty-fifth street and but a short distance away from the main entrance to Greenwood cemetery. He devoted himself almost wholly to the

concealment trade and built up a lucrative business. His straightforward dealings gained for him many patrons. He was a member of the New York Florists' Club and regularly attended the meetings of that body.

Besides the bereaved widow, one son, James J., is left to mourn his loss. The business will be continued by Mrs. Shanley, but will be under the personal supervision of the son, James J. Shanley.

George Roy.

Of apoplexy, at his home in Belvidere, N. J., George Roy, Sr., a well-known gardener and florist, suddenly passed away on the morning of June 5, aged 79 years. Mr. Roy was a native of Morayshire, Scotland, and came to this country 50 years ago. He had successfully taken charge of several of the finest private estates in New York and New Jersey. About 18 years ago he retired from active life and purchased a home in Belvidere. Up to the last he was never idle and always busying himself about his home grounds. The floral offerings were numerous and very beautiful, showing the high esteem in which he was held. A widow, four sons and a daughter mourn his loss.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

Albany, N. Y.

EYRES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Boston, Mass.

WAX BROS., 143 Tremont St. Orders for New England States receive our careful attention. We are located in the theatre and shopping district. Telegraph and mail orders solicited. Satisfaction Guaranteed. Established twenty years.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2840 and 4065.

Chicago, Ill.

HAUSWIRTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Dayton, O.

W. G. MATTHEWS, FLOREST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of reasonable varieties of flowers always on hand. Wire me your orders.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of reasonable flowers always in stock; delivery facilities perfect.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

S. Jacobs & Sons

It is perhaps little understood by the casual buyer of a few hotbed sash or material to build a few greenhouses, to what an enormous extent the manufacture of greenhouse material and hotbed sash has grown in the establishment of S. Jacobs & Sons. Throughout the entire country there is perhaps no firm better known than Jacobs & Sons for the manufacture of lumber for greenhouse purposes, and just now, when building operations are occupying the minds of a great many florists, it will not be out of place to give a brief history of their business career, together with a few words about the manufacturing plant which they have built up to such an eminent degree of perfection.

This business was founded in 1871 by Mr. S. Jacobs at 218 Canal street, New York, and for twenty years was there conducted, until it grew to such proportions that in the year 1891 property was purchased at the corner of Flushing and Metropolitan avenues, Brooklyn, and a new factory built there. In 1893 the two oldest sons, Joseph and Louis, having graduated from high school and gone direct into the workshop of their

father were taken into partnership. Ten years later, in 1903, Maurice L., the next oldest son, was taken into partnership, he having graduated from high school as his elder brothers had done; and at this time the senior partner, Mr. Jacobs, retired from business, leaving it in the hands of the three sons. At the beginning of the present year (1908) the youngest son, Harry, who in addition to being a graduate of high school had taken a course in a business college, was taken into partnership. Thus, at the present time the business is run entirely by the four sons of the family, each one having charge of his special department.

Joseph has under his personal supervision the entire manufacturing and financial affairs. Louis is in charge of the hotbed sash trade, and some idea of the immense proportions of this part of the business may be gathered from the fact that last year over 100,000 hotbed sash were sold. Maurice has charge of the greenhouse building department, he making all plans and estimates, and traveling whenever necessary. Harry has full charge of the office work, including all the correspondence.

A little over a year ago the increased needs of the trade made it imperative that a larger factory be built, and a substantial brick building, fully equipped with all the latest devices in the way of machinery, is now in full running order. In planning the new building for what it was to be used, every little detail has been well thought out, and the manufacture of sash and greenhouse lumber with the least handling and greatest expedition is accomplished. On the ground floor the raw lumber is put through the planing and molding machines, after which it is transferred to the floor above, where it is cut and mortised and put through various other operations necessary; then it goes up one more flight to what is called the assembling floor. Here the hotbed sash are put together and finished in every detail except the glazing and painting; this operation being done on the top floor of the building. Thus it will be seen that the rough material goes in at the bottom and comes out at the top in a finished condition, ready for shipment. The illustration of finished hotbed sash stacked in the yard will give some idea of the extent of this industry alone. The manufactured material for greenhouses is stored away in sheds, not shown here.

It is perhaps worthy of mention that of all the various machinery used in the manufacture of greenhouse lumber the firm here has not a single machine, or type of machine, in use at the present time that was in vogue at the time the Jacobs industry was founded. New inventions, particularly in regard to mortising and tenoning, have rendered obsolete the machines that were in use formerly. All the lumber used at the present time is cypress, and is conveyed from the South in schooners direct to the dock at the foot of Metropolitan avenue. In addition to the manufacture of greenhouse lumber, Jacobs & Sons are manufacturers of putty on an immense scale. They make both hard and liquid putty; their brand of the latter, called the Sealed-Tight, has already acquired an almost national reputation. The steam power required to operate the various machines is from two 400 horsepower boilers and generated through a Corliss engine of the latest type.

S. Jacobs & Sons, Brooklyn, N. Y.

Corliss Engine, Supplying all Power Needed.

Planing and Molding Floor.

Sash-Making Department.

S. Jacobs & Sons, Brooklyn, N. Y.

Exterior of Factory.

Finished Sash in Storage.

Glass Ready for Orders.

To give somewhat of an idea of the amount of glass carried by the firm, a view of the storehouse is here shown. At the present time there is on this floor approximately 500,000 square feet of glass in various sizes.

Some most interesting experiments are about to be made at this establishment which will, no doubt, interest the trade very much when completed. In conjunction with the forest service of the Department of Agriculture, Jacobs & Sons are erecting some tanks, in which tests are to be made of various liquids in which lumber will be dipped for the purpose of trying out certain prescriptions which are supposed to be beneficial for the preservation of lumber when used for either greenhouses or other purposes. Jacobs & Sons have entered into an agreement with the Department whereby these tests will be made under the supervision of a representative from the Department, and there is no doubt that some good will result from the tests about to be made and the trade at large will receive benefit therefrom.

In addition to being manufacturers of greenhouse material and hotbed sash, the firm are also dealers in boilers, glass, pipe fittings of all kinds and ventilating apparatus.

CLUB AND SOCIETY DOINGS

TARRYTOWN, N. Y.—The schedule of the tenth annual exhibition of the Tarrytown Horticultural Society, to be held on Wednesday, Thursday and Friday, November 4, 5 and 6, is being distributed. A general list of premiums is offered in the schedule, and those desiring a copy should apply to E. W. Nebrand, Secretary, Tarrytown, N. Y.

THE NEW YORK FLORISTS' CLUB. The June meeting of the club was held on Monday evening, with President Chas. B. Weathered in the chair and about sixty members present. After the minutes of the previous meeting had been read and accepted, Patrick O'Mara, for the Transportation Committee, reported that his committee favored the route of the D. L. & W. railroad for the journey to the Convention of the S. A. F. O. H. at Niagara Falls in August next. This railroad company will furnish a train leaving Hoboken at 10 a. m., and arriving at Niagara Falls at 9 p. m., with a dining car. This proposition looked so favorable to the members present that, after a short discussion, in which Messrs. Lenker, Stewart, Birnie, Traendly and Marshall took part, the committee, on motion, were given full power to make all necessary arrangements with the D. L. & W. for the conveying of the delegates from this city to Niagara Falls.

For the Outing Committee, Mr. Marshall (chairman) distributed programs to the members present and reported that the advertising patronage and the promises for the prizes and the sale of tickets were all well up to the usual volume, and that every indication pointed to a successful outing to Witzel's Point on July 1, both financially and otherwise.

W. C. Rickards was accorded a vote of thanks for the splendid manner in which he carried through the arrangements for the entertainment of the many visitors on Ladies' Night, which occurred May 27.

The following gentlemen were elected to membership in the club: B. C. Chadwick, August Millang, Alex. H. Donaldson, John Meisen, Alex. G. Hogg and J. Herlthy.

On motion, \$50 was voted to the Transportation Committee for general expenses.

On motion of Mr. O'Mara, a committee was appointed to draw up suitable resolutions on the death of Mrs. Thomas Young, mother of the worthy secretary, John Young. The president appointed Messrs. O'Mara, Traendly and Butterfield on that committee. Mr. O'Mara drew attention to the recent death of Wm. Scott of Buffalo, and remarked that, although Mr. Scott was not a member of this club, it would seem fitting that a committee be appointed to draw up resolutions and to send a copy of the same to Mrs. Scott. The motion was unanimously adopted, and President Weathered appointed Messrs. O'Mara, Stewart and Traendly, three members of the club who had served as president of the S. A. F., on such committee. A committee on resolutions was also appointed on the death of a brother member, James Shanley, and, as the next meeting of the club will not take place until September, the committee was instructed to send the resolutions to Mr. Shanley's family, direct through the secretary, as early as possible. Messrs. Birnie, Sheridan and Donaldson were appointed on this committee.

At the close of the business meeting, George V. Nash was introduced, and gave a very instructive lecture, illustrated by stereopticon slides, on flowering and decorative trees and shrubs. Mr. Nash went through the whole history of trees and shrubs likely to be of service to the general grower, commencing with the first flower that appeared—the pussy willow—and winding up with the berried evergreen trees of the Winter season. The lecture was immensely enjoyed by every one present, and a hearty vote of thanks was accorded Mr. Nash at its close.

The meeting then adjourned until the second Monday in September. The president took the opportunity just before adjournment to thank the members for the hearty support they had thus far accorded him in his administration, and hoped to see them all at the September meeting enjoying health and prosperity.

THE EXHIBITION.—Harry Turner, Castle Gould, L. I., exhibited two vases of Malmaison carnation, one a white, called Calypso, and the other a red, named Mrs. Trelawney—for which he received a cultural certificate.

Alex. G. Hogg exhibited a cluster of a white peony, of good size and very fragrant, which he brought with a view of getting the correct name of the variety. The Award Committee decided that it was Festiva maxima.

THE LATE WILLIAM SCOTT.—Whereas, We, the members of the New York Florists' Club, having learned of the death of Wm. Scott of Buffalo, N. Y., feel it our sad duty to offer our heartfelt sympathy to his widow and family in their bereavement. We feel that in the death of Wm. Scott we have lost a personal friend, who was beloved by all of us for his sterling qualities of head and heart. His loss is one that must be felt where-

ver a florist and gardener is to be found. His counsel, so freely and generously given, endeared him to all, and was of incalculable benefit to the craft as president of the S. A. F., of the Buffalo Florists' Club and as superintendent of horticulture at the Pan American Exposition. In his voluminous and practical writings he met the highest expectations, but it was his lovable traits as friend and companion that endeared him to all of us and will forever keep his memory green where men of the trade gather.

Resolved, That this resolution be spread on our minutes and a copy be sent to Mrs. Scott.

P. O'MARA,
Wm. STEWART,
F. H. TRAENDLY

Resolved, That this resolution be spread on our minutes and a copy be sent to Mrs. Scott.

P. O'MARA,
S. S. BUTTERFIELD,
F. H. TRAENDLY

MONTEAL, CANADIAN ASSOCIATION OF FLORISTS' CLUB. The members of the Montreal Gardener and Florists' Club, having heard with deep regret of the death of Mr. Wm. Scott, of Buffalo, desire to express their deep sorrow of the loss to the profession through his decease. They are, therefore, unanimously resolved that the members of this club deeply deplore his loss and tender the family of the deceased their sympathy and condolence.

W. H. HOWARD, Sec. Treas.

American Peony Society.

The sixth annual meeting and fifth annual exhibition of the American Peony Society will be held June 20 and 21, 1908, at the State College of Agriculture, Department of Horticulture, Cornell University, Ithaca, N. Y. An attractive and comprehensive premium list includes 13 commercial classes, and seven classes open to amateurs and private gardeners only.

The prospects for a successful meeting are good. The weather conditions have been favorable for the best development of the peony, and advices from Ithaca say to the effect that the plants in the test collections have wintered well and give promise of abundant bloom. The supplementary collection of selected varieties which was added last Fall should make the collections doubly interesting, placing as it does the cream of the collections of various growers side by side in such a manner that the varieties may be easily verified.

Professor Whetzel, as chairman of the Committee on Diseases of the peony, will make a report for that committee which undoubtedly will be of much interest.

To those who did not attend the meeting last year it may be said that all who did, have a pleasant remembrance of the hospitable manner in which the society was received, and in all probability are looking forward to meeting again where so much of interest is at hand, and where pleasure and profit may be combined in observing what has been done and what is under way in the interest of better conditions in the peony business of the country.

The regular business meeting will be held at 3 p. m. on the first day, June 19.

The test collections are now in the immediate charge of Mr. Leon D. Batchelor, and he requests all members and others who issue catalogues or price lists of peonies to favor him with copies of them.

New Jersey Floricultural Society.

"Flowers for Commercial Uses" was the topic at the regular June meeting on the 5th inst., at the society's rooms in Orange, and its discussion was a warm one, engaging many of the members in its debate. The subject was introduced by John E. Lager, who stated that soft colors were in demand and delicate tints, and that the popular taste was for novelty. Orson A. Miller said his experience behind the counter and on the road had convinced him that the average woman she was the largest patron of flowers—did not know what she wanted and after going through an entire stock would return to the first article shown, which she had previously strenuously declared she did not want; that at the present time striking contrasts were popular, and that dendrobiums and violets had been worn together this season. George Smith did not approve of the combination of orchids and violets. He considered that it violated nature, and that orchids made up better with maiden-hair ferns. In his experience, valley was the only flower that would combine with orchids, and to mix other flowers with them was to botch them. Mr. Miller suggested that taste did not dominate in the demand for flowers, but that a woman was moved by her vanity and a desire to wear at a reception something that no one else had worn was at the bottom of the popular demand, rather than harmonious combinations.

In touching upon the reason for suburban residents seeking the metropolitan markets, Mr. Lager considered that this was not from a desire to secure a bargain so much as the purchaser was not moved by price, for he had known where \$2 was paid in New York, while the same thing was rejected at 75c. at home. He was of opinion that variety was the first attraction and that the very best was sent to the metropolitan market, and the public knew this.

The floral display consisted of peonies from S. & A. Colgate (gardener, William Read), Charles Munn (gardener, John Hayes), and Stewart Hartshorne (gardener, A. F. Caparn); delphinium and digitalis from F. or as Jones of Shon Hills; carnations from Charles Hathaway (gardener, Max Schneider); orchids, consisting of cattleyas, cypripediums, helio cattleya and lycaeo, from Lager & Harris of Summit, and Orson A. Miller of East Orange.

George Smith was appointed to visit A. D. Rose, who is seriously ill at his residence in Montclair.

Putty Chaser or Mixer. 100 H. P. Boiler.

THE LATE MRS. THOS. YOUNG, JR. Whereas, God in His infinite wisdom has called to Himself Mrs. Thos. Young, mother of our worthy secretary, we, members of the New York Florists' Club, in regular meeting assembled, take the opportunity to tender to Mr. John Young, and through him to the other members of the family, our sincere sympathy in their sad bereavement. In departing from this life to reap her eternal reward for a life well lived, she leaves behind a sorrowing circle, not alone of kinship, but a wider one from whose life a kindly and guiding spirit has departed. In the sacred relations of wife and mother, she realized in the highest sense the aspirations of the human heart. Secure in the love and affection of her chosen life partner, honored in her children, she enjoyed the happiness of a long life, departing full of years and honors. A perfect woman, nobly planned, to warn, to comfort and command.

(103). I am considering the erection of a frame, as shown in the illustration, for the purpose of raising carnations and violets, and request that you be so kind as to advise me concerning same. Plants are to be set in the ground and no benches will be used. Trench through middle is to be wide enough and deep enough to permit convenience while at work. End of frame is to be about 20 feet from dwelling-house. Kindly advise me as to the easiest method of heating such a frame where there will be very little room for piping or heating apparatus of any description. Would it be practicable to heat it from the house and what method could be employed for conveyance of heat? I am at present using hot-air furnace in the house.

Newport, R. I. W. J. G.

—You will not be able to grow violets and carnations in the same frame. Violets require not more than 45 degrees, while carnations in these times run anywhere from 55 to 60 degrees. For a frame such as you describe for violets, would advise placing four 2-inch pipes, which can be hung on the sides in coils of two pipes each side. These pipes to be supported with pipe hooks, which can be screwed into the posts. The end nearest the dwelling-house will be the low point and you will let these pipes rise to the far end of the frame and place an air cock on same. You could heat a frame of this size from the hot-air furnace by placing in the fire pot of the hot-air furnace a hot-water generator capable of taking care of 200 square feet for the violet frame, and if for the carnation temperature, one of about 250 square feet. If your present hot water furnace is only large enough to heat your dwelling comfortably, you cannot very well arrange to heat with the above generator. My suggestion would be to install a small hot-water boiler of about 250 square feet capacity in the cellar of the dwelling near the hot-air furnace, which in all probability could be connected to the same flue and work successfully. The main trouble about heating a greenhouse with a hot-water generator in a hot-air furnace is that for greenhouse heating you require temperature at night, and you ordinarily bank a fire in a hot-air furnace at night, for not much heat is required in the dwelling; so you will see from this that you would not be getting the full benefit of a fire to heat the greenhouse during the night. A small boiler for the greenhouse could be kept running easily during the day, and a good temperature arrived at in the late afternoon, so that the house could be carried steadily during the night. The expansion tank in connection with this system could be located in some room on the first floor of the dwelling, preferably in the kitchen, and the overflow pipe could be run from the tank into the kitchen sink in case it should boil over. The main from the boiler outside to the greenhouse could be run underground in a trench; these pipes to be properly covered with non-conducting material. If you desire the carnation temperature, 55 degrees say, place three lines of 2-inch pipe on each side of the frame, making each coil one flow and two return pipes. A 2-inch main from the boiler into the greenhouse will be ample for you. From the above description you should have no difficulty in arranging to heat your greenhouse.

U. G. SCOLLAY.

CATALOGUES RECEIVED.

PETER LAMBERT, Trier a/Mosel, Germany. Catalogue of 1908 novelties in roses.

HERMITTE FREIDES, Orléans (var), France. Wholesale Price List of French Bulbs.

W. MAUGER & SONS, Brookdale Nurseries, Greenwich. Wholesale Bulb Catalogue.

PECUNIES FOR 1908. THE COTTAGE GARDENS COMPANY, New York. This is so far as our knowledge extends, the broadest and most complete Pecunia catalogue which has ever been published, and it is a credit to this firm for their bold presentation of the claims of the

Pecunia for public favor and appreciation. The front cover shows a vase of Peonies with individual flowers at the four corners; the back cover, a field of Peonies in their nursery grounds. The covers are printed in a tint of Persian orange and black, and make an effective impression. The catalogue proper is lavishly illustrated; and the two center pages show eighteen types of these gorgeous June flowers. The list of varieties represents a remarkably choice selection, the results of many years' collection abroad and at home.

FIRMS WHO ARE BUILDING.

Items for insertion under this heading are respectfully solicited from our subscribers. They are published free of charge.

CHICAGO, ILL. Anton Stenski will build seven greenhouses, to cost \$12,000, at 53 Youly avenue.

LEXINGTON, KY.—Bonaker, florist, will erect a greenhouse, 30x150 feet, which will be devoted entirely to roses.

ST. LOUIS, MO. A conservatory is to be built for the Yeatman High School, Harrison avenue. The house will be of iron and glass construction, 34 feet wide, 52 feet long and 16 feet high.

WEST HILL STATION, WASH.—Sandahl & Son, nurserymen, will add two more greenhouses to their plant this Summer. The new houses will be 100 feet long, the same size as the three houses built previously, and will cost \$2,000.

Lancaster, Pa.

With the advent of June plant trade is about over in this section, and taken as whole it has been very satisfactory, as is shown by the depleted houses of our retail florists and the huge bulge of the pocket in which they carry their money.

Like most cities where markets are a feature, there is some competition in the way of prices, but not serious enough to amount to much and our regular line florists are wise enough not to recognize it.

There is, however, a competition here from some of the numerous wholesalers who have surplus stock which they put up and put on the market at wholesale prices, on the theory, I presume, that half a loaf is better than no bread. This sort of competition is greatly to be deplored and can only be overcome by the teachings of co-operation, both in our societies and through the trade papers. All successful business men are getting down to a practical basis of co-operation, and until we do the same and do it wisely and intelligently, we will never have any real standing in the business world, no matter how much we may boast of our "wonderful God-given calling"; instead, we will be like the toad in the fable and eventually blow ourselves up with conceit. ALBERT M. HERR.

Everybody here is pleased at the trade on Memorial Day; the rain kept off until the afternoon of the 30th; nearly all were working all Friday night to fill orders.

Napoleon Lemay, the Hillman street florist, was fined \$5.00 in the Third District Court here for assault on a colored man; he appealed, and furnished sureties of \$100.

California Plant Notes.

There are two varieties of moraea growing here that have come under my observation, both of which merit a wider acquaintance among lovers of plants and a more extended cultivation. *M. Robinsoniana* is a stately plant, greatly resembling *Thormium tenax*. The flowers are white, the base of the outer segments yellow, the shape salver form. In that respect they are both different and distinct from the *Iridaceae* known as iris. The flower stem is very much branched, and very slender, as compared to its height.

M. iridioides is of much smaller growth, with pretty tricolor flowers, of white, yellow and blue, which do not last a full day. A peculiar characteristic of this plant is that the flower stalks do not die away annually as do those of the iris, but seem to be perennial; certainly the plant has produced bloom now three successive seasons. Both varieties grow from short rhizomes.

The *solandra* referred to in these notes seems to be the variety *guttata* instead of *grandiflora*. Whichever one, it is worthy of a place in every garden, wherever it will live in the open.

There are two shrubs in this State known as "arcese wood," yet they do not belong to the same natural order. *Alnus occidentalis*, of the genera *Chenopodiaceae*, is a native of the San Joaquin valley, growing in soil so intensely alkaline that no other vegetation will live in it. It is beautiful in foliage, quite as attractive as *Retinispora ericoides*. The flowers are inconspicuous. The plant will stand intense heat and great drought; indeed both seem to be essential to its best appearance.

Adenostoma fasciculatum, belonging to the order *Rosaceae*, is a native of the coast range of mountains, covering their sides during April and May with its beautiful panicles of white flowers, at a distance having the appearance of California privet. P. D. B.

SALEM, OREGON.—The third annual Salem cherry fair will be held at Salem, Oregon, July 9 and 10, 1908. At the convention last July of the Pacific Coast Association of Nurserymen, a resolution was adopted saying that the second annual Salem cherry fair was the greatest and finest display of cherries known to history, and Salem was christened the "Cherry City of the World," by the association. That Salem is entitled to the name will be admitted by everyone visiting the Cherry Fair this year, as it will be much larger and better than ever. Fruit from every cherry section of Oregon will be entered for prizes, and a few are expected from Washington and California, both States being represented last year in the exhibits.

In addition to the cherries (for which a large number of silver cups are offered as premiums) there will be premiums for and displays of other fruits, as well as roses, sweet peas, Burbank's Shasta daisies and other flowers. A large number of handsome diplomas will also be offered as premiums. These diplomas are being specially prepared by one of the largest lithographing companies, and will be fine works of art that will be prized by all winning them.

Cherry growers from all sections are urged to be present and bring fruit for exhibition. Premium list and rules will be furnished to any interested. All fruit growers, nurserymen and florists are invited to be present.

Those desiring to attend the Pacific Coast Association of Nurserymen can do so, as the two meetings are held early in July. F. W. Power,

Chairman, Cherry Fair Committee.

HOUSTON, TEXAS.—Robert Lupcke, florist, 902 Main street, and Mrs. Lupcke, have sailed for Germany, where they will spend the Summer at their old home.

DALTON, MASS.—John Shields, florist for Fred G. Crane, will sail from New York July 1, for a two months' trip abroad.

White Form of *Cattleya Mossiae*.

Grown and Exhibited by Julius Koehrs Company of Rutherford, N. J., at the June Show of the Penna. Hort. Society.

FIRMS INCORPORATED.

ATHENS, TEXAS.—The Olea Orchard Company, capitalized stock \$15,000. Incorporators: E. L. Maxmon, A. B. Mandelstamm, and E. Y. Brady.

DENVER, COLO.—The Cedaridge Orchard Company is a newly incorporated firm, capitalized at \$50,000. The incorporators are: E. D. Ewing, C. H. Pugh, and C. E. Chadsey.

Nut Notes.

Indications are favorable for a larger crop of walnuts in California than usual.

There is a wide range in the habit and growth of nut trees. In size they run all the way from the six-foot hazel bush to the monarch walnut and, as to longevity, from the ten years of an almond to the centuries of the pecan.

Some surprising figures were tabulated at the recent nut growers' meeting at Monticello, as to the average of commercial pecan orchards. In four Georgia and five Florida counties the area reported amounts to 6,885 acres or about 110,000 trees. In this tabulation none of the seedling orchards were counted.

Georgia and Florida nut growers effected a permanent organization at a meeting in Monticello, Fla., May 19 and 20. W. C. Jones, of Cairo, Ga., was elected president; A. A. Rich, of Lamont, Fla., vice-president; Ray C. Simpson, Monticello, Fla., secretary; J. B. Wight, Cairo, Ga., treasurer.

ROCKLAND, MASS.—Harry Arnold, who is designer for a firm of florists in Rochester, N. Y., has arrived home for a visit.

New Bedford, Mass.

Trade is about the same as usual. There is not much call for cut flowers just now; funeral work is very good, using up lots of flowers. Carnations are selling at 25c. and 35c. per dozen. Last Saturday was Carnation Day. Bargains were held by different firms at ridiculously low prices; the fakir in front of the Parker House was selling them at 10c. per dozen, and doing a rushing business. J. H. Cleary, on Pleasant street, was selling them at 12c. per dozen, and lots of roses, too, were sold by him cheaply. Davenport & Sons, in the Five Cents Savings Bank basement, advertised 15,000 carnations for Saturday only, at 15c. per dozen. Truly it was bargain day for the divine flower in this city on Saturday last. Roses are very plentiful; the general price for good stock is \$1.50 per dozen retail. The supply of sweet peas from indoors is shortening; the outdoor crop will soon be in. There has been, and still is, a good demand for bedding plants, especially so in geraniums; these have sold exceptionally well here this season. *Salvia* plants are in good demand. Many of the florists have had to go out of town to procure geraniums, so great has been the call. They sell at 10c. and 12c. each, according to the size of pots. William P. Peirce on Saturday had a fine window display of hydrangeas and spiraeas; it made a pleasing combination. E. Y. Peirce, on Cottage street, reports the bedding plant trade as great; he is all cleaned out of everything in that line.

Brighton, Mass.

Few rose growers in the country are better known than W. H. Elliott of Brighton, Mass., but his establishment and method of growing roses are perhaps not so well known. The Brighton place first became famous as a Mecca for asparagus growers, and, I believe, was the original establishment to build houses of special design suitable for growing this crop. Asparagus plumosus is still largely cultivated here, both for cut strings and bunches and for young plants. Asparagus Sprengeri is also largely grown, several houses being devoted to it. The output of these two products is enormous, and shipments are made to all sections of the country.

Roses are largely grown and for a number of years hybrids and other large growing varieties were cultivated, but now the varieties mostly grown at the Brighton place are Bride, Bridesmaid, Kaiserin Augusta Victoria and Liberty. The latter two varieties are grown for Summer use and there are several houses of each.

It is surprising to see Mr. Elliott's method of cropping these roses and no better time than the present could be found for noticing the different growths as the various sections of a house come in crop. What I mean is, that one bench will be in crop, another coming along with the prospects of cutting commencing just as soon as the last blooms of the bench in crop will be cut, and still another bench will be coming along later to take the place of the bench ahead of it; and so this rotation method goes on and has been found here to be the most practical for the production of high-class blooms, and especially is it the most practical for growing the Summer varieties like Liberty and Kaiserin Augusta Victoria.

As a grower of Richmond and Killarney Mr. Elliott has made his mark as a leader, for such fine blooms of the latter variety as carried off the honors at the exhibitions of the Boston Flower Growers' Association, the Massachusetts Horticultural Society and the exhibition of the American Rose Society at Chicago, had never before been exhibited to the American public. It is not at Brighton, however, that these varieties are grown, but at Mr. Elliott's New Hampshire establishment at Madbury, and I will tell about this place, where the greenhouses are famed for their size, at another time.

The growing of asparagus, and of roses for cut blooms, are by no means the only branches carried on at Brighton, for one of the special industries is the growing of marketable young plants of grafted roses. Not only does Mr. Elliott grow all the young stock which supplies his own two mammoth establishments, but many thousands are disposed of annually to growers in nearly all sections of the country. Quite a few houses are devoted

to these young plants which are at present in first class condition for planting out in benches. Our illustrations show young plants of Killarney in two sizes ready for packing for shipment, houses of the young plants with Mr. Elliott and his foreman, George Harbison, examining the plants and a house at the Madbury establishment,

where the exhibition blooms mentioned were grown and where the young stock shown was produced.

J. W. DUNCAN

Value of Leaves as an Insulator.

Editor Florists' Exchange.

Many growers are compelled to use gravity tanks for their water supply, and have been induced to buy expensive felt asbestos, or magnesia coverings, in order to evade the treacherous frosts, or serious inconveniences and losses subsequent to frozen or bursted water pipes. All such can find no better insulator than ordinary oak leaves from the woods. Of course this applies to use above ground and where the leaves are protected from the rain. Their comparative value with the costlier insulators may be gathered from the following personal observation and experience of the writer. A successful violet grower of Maryland, in order to secure the benefits of high water pressure, had his tank on a fifty foot tower. One 1 1/2-inch pipe supplied this tank and served the additional purpose of delivering the water back into the houses. The pipe was first of all wrapped with a thick felt, then costly asbestos, asbestos wool, and then alternating in the order named until the diameter over all was seven or eight inches. The whole was then wrapped with tar paper, and boxed in the usual way in 12-inch boards. The owner was assured that his pipes were protected against any temperature that might be

W. H. Elliott's Young Killarney Rose Stock. Photo by J. W. Duncan.

House of Killarney Roses at Establishment of W. H. Elliott, Madbury, N. H. Photo by J. W. D.

In this house were grown the famous flowers that captured first honors at the Chicago Show of the American Rose Society, the Boston Market Flower Show and the Spring exhibition of the Massachusetts Horticultural Society.

expected in that part of Maryland, but a cold spell of short duration, with the thermometer at some eight or ten degrees above zero, proved the fallacy of the claim. The pipe froze and burst, and the violets had to be watered by hand until repairs could be made.

Per contra, the writer's tank, thirty feet high, in an exposed position and having two pipes, one 1 1/2-inch supply, and one inch delivery, encased in ten by twelve inch pine board casing and filled with leaves, passed unharmed through this spell and even a lower temperature.

A walk through any wood when the earth is frozen will convince the most sceptical, for wherever there is a coating of leaves an inch or so in depth the earth is not frozen below. The leaves are nature's insulators and form among themselves small dead air spaces, a principle sought in the most scientific refrigeration; or, vice versa, the retention of heat.

Where this method is tried three sides of the casing should be erected in position, with pipe well centered; then the finishing board for the fourth side cut into lengths of not over six feet, so that the leaves can be packed tightly with a stick until each section is filled to the top, where shorter boards will be necessary in order to pack securely.

Care should be observed in avoiding holes through which mice, rats or flying squirrels might enter and make nests, thus creating an opening for frost.

A box so constructed, and wrapped neatly with twofold tar paper, will prove a boon to the man who has had troubles for which this may prove a remedy.

The size of the wood casing should be increased when temperatures below zero may be expected. J. L. C.

EDWARD J. TAYLOR, Greens Farms, Conn.

ROSES

From now on our whole time will practically be devoted to preparing for next season—young stock to plant and old stock to trim and mulch in readiness for a new start. June is undoubtedly the best month to get the work under way. Of course, all the compost heaps should be turned over at least once by this time, and every place should afford an old soil to keep enough soil covered in stormy weather to use as necessary. Wheeling in and leveling wet soil is a disagreeable job, and scratching over the beds after the weeds start is still worse, so that the cost of the canvas is made up in one season. It will last some time if it is taken care of and given a coating of oil once a year to keep the cord with which it is stitched from decaying.

After removing all the plants and old soil make sure to wash out every corner of the benches well; then give a good heavy coating of hot lime. A little straw should then be spread to keep the soil from going through the drainage. Put on the lime while the bench is still wet.

Never allow the benches to remain empty very long if they are to last, as the hot sun takes the life right out of the wood. For shading the glass while this work is going on there is nothing better than whitening and water, as the first rain will remove it, and it is not injurious; it will not affect the paint like lime.

If possible, have at least 5 1/2 inches of soil in the benches, the edges being well packed and the beds nicely leveled off. Bride and Bridesmaid should be planted about 15 or 16 inches apart; American Beauty 18, and Richmond and Killarney 14 to 15, as these produce little blind wood, and can thus be planted a little closer. With this space between the plants a 32 to 36-inch bench should only have three rows of plants.

Never plant a dry plant; the ball should always be nice and moist, and do not allow the plants to be out of the pots too long before planting as this is bad for the roots. Firm the soil around the ball well, being careful that no holes are left. Pounding with a brick, however, should not be resorted to; that was the custom years ago, but we have outgrown it.

After planting soak the whole bench, after which water only the ball of the plant as necessary. Syringing will keep the soil between the plants moist enough. As soon as possible, go over the beds and break up the lumps; this is best done by hand, as when a weeder is used by a careless man the plants may be barked and injured forever.

Keep the ventilators open full night and day on all the houses, when the weather permits; this will make the young stock sturdy and help the size of the flowers on the old plants.

Fumigate regularly when cool enough. Tobacco stems will be found more effective and cheaper for young plants, but be careful the soil is moist, or rather the plants are not dry at the root, and never allow the stems to blaze or the plants will get scorched.

Philadelphia.

Mr. Wm. L. Schaeffer, 227 No. 16th street, reports that Memorial Day business was much better than any he has experienced during the past forty years. At this time his entire force is busily engaged in turning out a number of funeral designs, orders for which he thinks he is getting more of than any other florist in town. Mr. Schaeffer is noted for originality in this class of work and makes up all designs from his own ideas, with the result that he holds his trade for years. His window display attracts considerable attention.

Mr. John G. Eisele, 1031 Columbia avenue, is one of the busiest florists on the avenue; he reports good business in design work and also sells large quantities of potted stock, of which he has a specially fine supply.

The local florists were very glad to supply single carnations last Saturday, June 6, in remembrance of William McKinley, whose bronze statue was unveiled on City Hall Plaza in the presence of the city fathers and the local Grand Army veterans; a large number of those present wore the flower so well liked by Mr. McKinley.

Mr. Chas. H. Campbell, 3601 Germantown avenue, has received more design work and wedding decorating this year than any year for the past five, and has a big order for a wedding this week. The stock of geraniums shown in his greenhouses is of special interest to those wanting the very best to be had.

Harry Alger, at 20th and Atlantic streets, Tioga, is kept very busy at this season with landscape work, and is also doing nicely in funeral work, with considerable call for potted stock for bedding.

John A. Ehrler, 2138 Bellevue avenue, is doing lots of landscape work and has several assistants busily engaged. Mr. Ehrler has quite a reputation among the neighbors in that they can get anything in the flower line from his place and some rather hard orders are thrown his way.

The florists located in our residential districts have considerable cause for complaint when the huxter or fakir either uses a push cart, or drives a wagon through the street, calling at every house and selling potted stock at prices lower than the retailer pays for his, but the goods sold by the fakir are not usually of much value, and, in the end, the retailer is requested to call and replant, or else the house-keeper throws out the whole bed.

John G. Eisele, 3325 No. 20th street, is one of the oldest florists in the city and is very well known by all the trade as a grower and retailer, controlling a large amount of the business in his part of the town. Mr. Eisele tells of a trip across the ocean a few years ago, and said he expected to see men engaged in the flower trade, but that all he saw were girls selling flowers, and he sometimes got up very early in the morning to see how they did business there.

Wm. C. Smith, located at 61st and Market street, was very busy packing and making ready for shipment a large order of ferns in 12-inch tubs for decorative purposes at Atlantic City; he has been in Asbury Park for a few days looking after more orders there.

Otto Didden, Cemetery Lane, West Philadelphia, has at last finished the 26-foot launch, which he has been working on during the winter, and will soon be in position to take his friends down the river on short trips, and Otto certainly does do things up right.

Mr. LeGierse, 4653 Lancaster, is importing a new fern, and expects same to arrive shortly.

Mr. Chas. Meehan, of Pennock-Meehan Company, has been laid up for several days, but is expected back soon.

Mr. Tanner, of Richmond, Va., a grower and retailer, has been in town calling on the trade and friends.

W. E. McKissick Company are the first of the commission houses to close at six o'clock; this rule started June 6.

Leo Niessen Company has some of the best outdoor sweet peas that they have had this season, and report some good business in this stock; they are receiving from 40 to 50 thousand daily.

LeGierse Bros. are now spending their spare time boating on the river in their new launch, the "Three Brothers," which they made in their odd moments last winter; by all accounts they are having some good times.

S. J. REUTER & SON, Inc., WESTERLY, R. I.

Mr. O'Connell, of the Overbrook Nurseries, reports very busy times and employ time wagons hauling soil around town; cutting about 20,000 feet daily. These nurseries raise more Oriental Plane trees than any other in the country, and endeavor to give the largest stock to be had; they recently filled an order for one thousand 3 inch trees to be used in New York. Mr. O'Connell has the city contracts for street and park work and keeps a large force of men employed all the time.

The Florey Gardens are building and have ready for the glass two houses which will be 300x30 feet when completed.

Alfred Campbell reports fair business in green goods and has always a good stock on hand.

The Bellevue-Stratford flower shop reports a fair business in sprays and cut flowers to the patrons of the hotel, and also some outside weddings and funeral work. P. M. R.

Indianapolis.

Trade News.

No one is disappointed in regard to the number of June wedding decorations this year. There have been no exceptionally large ones, but a good general average atones for this. Brides' bouquets and the various belongings are being ordered in generous quantities.

Funeral work of late has been disastrously light, and white stock, such as Harrisii lilies, is left untouched. Another spell of extremely warm weather has put thousands of blossoms upon the market for which there is no sale, as counter trade has fallen to a very low level for so early a date.

Recent high school graduations called for thousands of red roses and daisies, the patronage for same being held by the various retailers. Good grades of carnations are being offered at \$1.50 to \$2.00 a hundred; small and medium grades, 75c. to \$1.00 a hundred. There is not much satisfaction in the rose business just now, as they open up too quickly to derive any profit from them. About 50 per cent. are sold and the remainder goes to waste. Beauties, perhaps, are farthest removed from this condition, and the prices remain firm. Garden roses, Madame Druschki, Crimson Rambler, Prairie Queen and others find much favor in table decorating by those wishing exceptional arrangements. I. B.

CHESTER F. BRAINARD, THOMPSONVILLE, CONN.

REVIEW OF THE MARKET

NEW YORK The cut flower market continues to be in rather a depressed condition. The enormous quantities of peonies available and the low prices at which they are going has, no doubt had a bad effect on greenhouse grown flowers, and the carnation and rose men will without doubt, be glad when this peony season is over. The severe warm weather experienced this week will help to bring about that condition shortly; at least, that is what is expected. In the retail line there is not much doing, and whether weddings and commencement will live up to the business toward the end of the month or not, remains to be seen.

Roses of all kinds continue to be more than plentiful enough for what demand there is, and prices have changed a little since our last quotations. Carnations are so plentiful that prices are even lower than they were last week. Buyers who speculate in thousand lots have no difficulty in getting choice varieties at 25c, or 30c, per 100. Asparagus and maiden-hair fern are in very good demand, simply because there is so much outside green stock available now that is considered more suitable to be used with such flowers as peonies. Cattleyas are still plentiful and are offered cheaply. Sweet peas have lessened materially in supply, but these are more than made up for by the increase in such flowers as gladiolus, ismene, pyrethrum and centaurias. Lily of the valley is about the only flower for which there has been a demand somewhat corresponding to the supply. There are plenty of lilies still coming in, and \$3 and \$1 per 100 seems to be the highest they will bring.

BOSTON There is little doing in the wholesale district these days. All kinds of flowers are plentiful, in fact, so much so that there are no prices. Roses sell in large quantities at very low figures and the same may be said of carnations. Peonies are now in full swing and sell better than many other flowers. Festiva maxima is the best variety at present. Lilies still are plentiful. Lily of the valley has been in fair demand. The market in general is getting down to summer conditions and will likely continue for sometime to come.

PHILADELPHIA Commission men report very slow business this week but not worse than is to be expected at this season. Stock is moving very slowly and about 75 per cent of that received has been of poor quality, due to the warm weather now being experienced in and about Philadelphia.

Good stock in roses and peas are in demand but prices are very low except for the very best. American Beauties go slow at 25c, but the majority run at about 20c. Brides and Bridesmaids run from 2c to 10c. Cattleyas being from 10c to 50c and some nice stock is on the market. Carnations run from \$1.00 to \$2.00, and to 5c for the fancy varieties. Sweet peas from 50c to one dollar, and the outdoor stock is very fine at this time. The retailers are getting some few orders for funeral work and also some nice wedding and commencement decorations, but outside of this very little business is being done except in potted plants and leafing stock. Some of the retailers have today some orders for daily in receipt of decoration orders for the graves, and the landscape men are busy sodding and making beautiful the lawns in their neighborhood.

St. Louis.

News Notes.

The Belleville florists had a very busy week. A convention of an order known as the Egyptian Hustlers was held during the past week. A floral parade on Friday, in which all the florists in that city took part, used up a lot of stock.

During the week the State Horticultural Society held a three-day session at Mountain Grove, Mo. Fifteen members attended the meeting and elected the following officers at the last session: W. P. Stark, president; R. L. Hill, first vice-president; J. J. Chastin, second vice-president; T. H. Todd, treasurer; L. C. Howard, secretary.

Park Commissioner Seanan has returned from his Eastern trip and is back at his desk in the office of the Park department in the City Hall. During his absence Superintendent Ostertag had his hands full attending to his own and the Commissioner's duties.

Mr. and Mrs. Fred. C. Weber, their daughter and the Misses Meinhardt will leave next week for a month's trip

INDIANAPOLIS Out-of-door sweet peas are paying good at 50c to 50c a hundred. Fine hot-house gladiolus are received at \$3.00 to \$4.00 a hundred. The local peony supply is about gone. A few stragglers sell well, though at \$2.00 to \$4.00 a hundred. The Northern supply, or those in cold storage, will have to be depended upon hereafter. Evert W. Vandufft, Canterbury Bells and swansons augment the heavy cut of flowers, but have little market value. Lily of the valley at \$3.00 to \$4.00 a hundred are generally in demand. Reports from the growers reveal the fact that the usual amount of bedding was done this year. It is almost impossible to find any good stock left for remaining orders. Tomlinson Hall market has enjoyed a lively week. Both the wholesalers and the general retail trade were inclined to buy there instead of ordering from the growers direct. Prices are often better and the choice of stock larger than at the individual farms. I. B.

ST. LOUIS The demand for cut stock has again fallen off and the supply at the commission houses is large in all flowers in season. While the glut is not as great as it was a few weeks ago, still it shows that the retailers have not been any too busy the past week. We hear of only small affairs in weddings, receptions, dinners and other social events, and not any too many at that. Work for funerals has kept some quite busy. The graduating classes of the large schools this week should bring an extra demand for special stock. This practically ends the season. Prices the past week were down on roses and carnations, which are showing the effects of the hot weather. Sweet peas, candidum lilies and peonies are in plenty, so is lily of the valley. Other flowers that are coming in are common outdoor stuff and do not, as a rule, sell well. Everything in greens is plentiful. ST. PATRICK.

CHICAGO Extreme quiet prevails in wholesale circles, and the daily receipts of stock of all kinds are said to be heavier than at any time heretofore. Peonies are in tremendous supply, and tend to dwarf the demand for everything else. The range of quotations on them covers what exists in the way of legitimate demand, and are prices obtained for first-class stock. Anything not first-class moves when it can be made to move, at any price obtainable. The ash barrels receive a goodly load every day. Roses are extremely plentiful, and much open and soft stock is seen among arrivals. When close and of good appearance, prices come within the quoted range. Otherwise fairly good stock goes as low as \$3 per thousand in clearance lots. Carnations still continue plentiful, and arrivals show the effect of the weather and the long benching season. Transactions this week have been frequent covering \$1 per 1000 on large blocks. Lilies are plentiful, but don't seem to be wanted. Plenty of really good stock can be bought at 2c. Lily of the valley is one of the good things, the best bringing as high as 5c per spray. Sweet peas are in over-supply, the outside product figuring heavily in arrivals. Orchids are a good thing, and more could be handled, such as are arriving are fine in quality. The weather has been abnormally warm for a few days, and very little relief can be looked for in this market until it changes.

through Colorado, visiting Yellowstone Park and other points of interest in that State.

Our suburban florists have at last commenced planting out their carnations. The continued rains during May have at last let up. This alone has kept them back with all their outdoor work. All had a fairly good season and plenty of stock.

Frank Weber, who will have charge of the delegation of nurserymen from here for the Milwaukee Convention of the American Association of Nurserymen, which takes place this week, reports a large delegation from here and other points.

The Bentzen Floral Company report that they have the floral work and plant decoration of the Yeatman high school. More plants and cut flowers are being used this year.

The local seedsmen are making preparations to attend the convention of the American Seed Trade Association this month at Detroit, Mich. A large delegation is promised.

Shaw's Garden, known as the Mis-

GRAFTED ROSES

Send for catalogue

WOOD BROTHERS, Fishkill, N. Y.

souri Botanic Garden, had its first Sunday opening in the year June 7. The attendance was not near as large as last year; the threatening weather and heat kept many away. Last year's first Sunday counted 26,114; this year the number of visitors counted 16,559. The heads of the garden, Prof. Wm. Trelease and Superintendent H. C. Irish and a host of students were at the gate to receive the visitors when the big gates were opened, and were shown through the garden. The Shaw tomb and the big orchid and cactus houses were the big attractions; also the new buildings near the Shaw home. Everything was at its best and the garden presented a fine appearance.

One of the new additions opened recently shows a collection of 325 plants used in the practice of medicine. The first Sunday in September will be the next open Sunday.

The trustees of the Florists' Club, Messrs. Beyer, Smith and Schoene have arranged for the annual picnic of the club, to be held at Normanda Grove on July 15. ST. PATRICK.

Cincinnati.

Trade Notes.

There is nothing startling to report, except that this market could use more good sweet peas at the present time. Other stock is plentiful and the greater portion of it is selling at starvation prices. Commencements are doing very little so far to boost the cut flower business, and weddings are not helping much. Julius Bair had the Myers-Crowell wedding at Springfield, O., on Saturday.

Miss Alice, sister of Edith Kyrk, was married Wednesday.

Ernest Mack of Price Hill is building a fine modern residence near his greenhouses.

J. T. Conger of Hartwell, says his Spring bedding has been quite satisfactory. By the way, Mr. Conger is one of the "City Dads" for this suburb, and the political hanger on is not finding his task easy; he has to work. E. G. G.

VERBENAS

Best Mammoth, from pots, 13.00

ASPARAGUS

PLUMOSUS NANUS, 2 1/2 in. pots 4.00
3 in. pots 8.00

Pauline, Stella Gurney, Alternanthera, Ampelopsis Veltchil, Browallia speciosa major, Cuphea Platycentra, Colens, Dracena Indivisa, English Ivy, Feverfew, Fuchsia, Geraniums, Gazania Splendens, Heliotrope, Ivy, German, Labana, Lobelia, Moonflower, Petunias, Petunias, Salsvia, Stevia variegata, Tropaeolum, Vinca, and Violets.

Detroit.

News Items.

Cut flowers and cut flower business have a genuine Summer look; both are poor. Large weddings are very scarce this year and there is not any too much demand in other directions.

The excursion of the local Board of Commerce, which marked the initiation of the new palatial steamer, City of Cleveland, called for a great number of American Beauty. One local firm distributed carnation boutonnieres, with a little ribbon on which the firm's name was printed, among the 500 participating business men. Another florist gave to each a rose boutonniere.

The main topic of local interest is the battle between the two local wholesale houses on the diamond, which was fought out at Belle Isle last Friday afternoon. Many availed themselves of the opportunity to make this event a half-holiday and the result of the contest, 15 to 20 in favor of the Michigan Cut Flower Exchange, is very satisfactory. Specially fine work was done by Andrew Ferguson, pitcher for the Michigan C. F. E., who struck out five men in one inning.

The new fancy ferns are coming in at the Michigan Cut Flower Exchange. This firm is also putting many thousands of peonies in cold storage.

Prices for cut flowers are just now difficult to quote; the bottom has dropped out.

Reports from the field are very encouraging. Carnation plants are doing splendidly and asters are also very promising. FRANK DANZER.

SCHENECTADY, N. Y. Chas. Limmers, florist, has moved from 507 to 321 State street.

WASHINGTON, D. C. Mr. and Mrs. J. P. Thompson, who have had charge of the Rock downtown greenhouses for several months, have gone to Burlington, Ia., where they will make their future home.

Worcester, Mass.
Trades News.
At the Worcester County Horticultural Society's exhibition last week George McWilliam, gardener for Mrs. G. Marston Whitin of Whitinsville, made an exhibit of yellow callas, and they were yellow, too. Yellow callas previously shown have been very pale, but those exhibited by Mr. McWilliam were of a very deep color. He also showed some very nice lily of the valley grown on the Whitin estate. This is grown in the woods and covers about a quarter of an acre; it is very fragrant. J. W. Seldon showed some handsome yellow Marguerites arranged in a mammoth basket. E. W. Breed took premiums on zonal geraniums, as usual; there are very few who can equal Mr. Breed on geraniums. George McWilliam, who has served as judge of flowers for many years, left on June 2 for Scotland. His wife accompanies him. William McAllister will serve as judge during the Summer.

H. F. A. Lange was very fortunate in having a large stock of geraniums in bloom for Memorial week; other growers were very shy on them.
A handsomer house of stocks was never seen by your correspondent than that shown by Mrs. Hugo Book, the spikes being large and round as hyacinths.
The Memorial Day trade in Worcester was larger than ever before and was better handled. There was a good supply of stock. Many hundreds of pans of assorted plants were made up and disposed of and delivered on Thursday, thus casing up somewhat Friday's business. The quality of the flowers was fully up to the standard and was timed well as to maturity. TRAVELER.
WORCESTER, MASS.—Thomas Hocky, Sr., former manager of the Norcross and Stratton greenhouses, has gone to Marlboro, where he will run the Lewis greenhouses.

The rose and peony exhibition of the society will be held to-day and to-morrow with the rose and strawberry show on the 20th and 21st inst.

The schedule for the Spring show of 1909 is already in the printer's hands and will be issued at an early date.

Items of News.

Charles Evans of Waltham, has bought out the other heirs of the Chas. Evans estate, and will now continue the business under his own name.

Henry M. and Charles Robinson of the wholesale florist firm, have gone on a fishing trip to Maine.

Burglars entered the home of Thos. Pegler at Wollaston on Friday night, but got scared away before taking anything of value except a coat, in which were some papers of importance only to Mr. Pegler.

At the next meeting of the Gardeners and Florists' Club on the 16th inst. A. H. Kirkland will talk on insects injurious to shade trees.

Samuel Beck has gone to New York for a visit.

Among visitors this week were C. B. Weathered and Geo. Struck, New York.

Wedding.

Benjamin A. Snyder, of the flower department of H. M. Robinson & Company, and Miss Bertha Levine were married on Sunday at the home of the bride in Roxbury. The ceremony was conducted by G. Halpron of Blue Hill Avenue Synagogue. Laurel festoons and a profusion of flowers adorned the rooms, the decorations having been carried out by Samuel Beck and W. A. McAlpin. The bride carried a bouquet of lily of the valley, showered with ribbon. On account of pressure of business the honeymoon trip will be delayed till Mr. Snyder's usual vacation time. On their return the happy couple will make their home in Roxbury. J. W. D.

Kalamazoo, Mich.

Trade Notes.

Fine weather prevailed most of the few days previous to Memorial Day, consequently there was quite a large and satisfactory business done for this occasion. The chief call, as usual, was for carnations, which sold at from 35c. to 60c. per dozen and many thousands were disposed of, as outdoor flowers were few and the florists' flowers were reasonable in price. Made-up bouquets ranging in price from 25c. to \$1 also were extremely popular and were easily handled by the salesmen. The plant with a bloom on was also a winner and some storemen say was the best seller of all. Altogether the week's business may be called satisfactory, even if it did not come up to that of last year's. Shipping trade during the week was reported good, with plenty of stock to fill all orders.

Bedding plant trade continues to be hampered by much rain and some growers have not yet been able to complete their plantings of carnations on this account. The month of May has made new records for both heat and rain in this locality.

A few June weddings and the school commencements will help things for a few weeks longer, after which there will not be much doing till next season.

Van Rochove & Brother have already commenced replanting roses and are now busily engaged in transferring all their glass to the Rose Hill plant. Labor being abundant and cheap the work is being pushed rapidly.

F. Meyers expects to retire from the Riverside greenhouses about June 10, the purchaser taking them over at that date. S. B.

The Rhododendron Show.

The exhibition of the Massachusetts Horticultural Society on Saturday, which is known as the annual rhododendron show, was almost entirely without these flowers, the only competitors being Walter Hannevell and Mrs. J. L. Gardner, each of whom had a small lot of flowers. It was a good show just the same and the main hall was well filled. The collections of herbaceous flowers were fine in the prize classes. The Blue Hills Nurseries carried off all the honors. R. & J. Farquhar & Company and W. W. Rawson & Company each had an extensive exhibit of hardy flowers, including many fine varieties of German irises. In the prize classes for German irises, T. C. Thurlow & Company took first, with F. J. Rea second. A silver-gilt medal was awarded to R. & J. Farquhar & Company, for a collection of rhododendrons and kalmias in pots. First-class certificates were awarded to Robert Cameron of the Harvard Botanic Gardens for culture of *Cereus speciosus*; and to Julius Heurlein of the Blue Hills Nurseries for *Lupinus Moorheimi*. Honorable mention was given to H. S. Rand for exhibit of *Magnolia Watsoni*.

There were many other fine exhibits, including the orchids of Mrs. J. L. Gardner and J. E. Rothwell; a fine display of peonies from E. J. Shaylor and a lot of *Fuchsias* from the Harvard Botanic Gardens. The vegetable exhibits were exceptionally fine, especially those in the collections of the Spaulding estate and W. J. Clemons.

Chicago.

The Week's News.

The regular monthly meeting of the Chicago Florists' Club was held at the Union Restaurant on Thursday evening June 4, the president, Leonard Kill, occupying the chair. The attorneys having in charge the settlement of the Hartshorne benefit reported by letter satisfactory progress. The committee having in hand the picnic project reported that the grounds at Morton Grove would be available for the use of the club on Sunday, July 19. After some discussion it was, on motion, decided to hold a club picnic on that day, and a committee, consisting of George Asmus, T. E. Waters and Fred Lautenschlager, was appointed to carry out the affair. W. O. Johnson, of the Foley Manufacturing Company, was elected to membership, and W. A. Arnold of Chicago was nominated for election at the next meeting. There was staged a grand vase of new peonies by Vaughan's Seed Store, which received very favorable comment. The usual lunch was served before adjournment. It was decided to hold no meetings during July and August; but if a special meeting was found necessary for the discussion of matters relating to the S. A. F. Convention the president would call the same.

Deerfield, Ill., has the sweet pea craze. Last year four growers went heavily into outdoor sweet pea culture, and this year the number has been increased to a dozen or more, with a corresponding increase in acreage. If the crop all comes to the Chicago market it will require more than ordinary hustling to move it.

W. C. Kaber of W. C. Kaber & Company, La Porte, Ind., and Mr. Glaeser of Dubuque, Ia., were in town early this week, and called upon the trade.

H. R. Hughes, the Van Buren street florist, as an auxiliary to his Memorial

Day window setting, on the day itself erected a small handstand in front of the store, on which a fifer and a drummer played martial and patriotic airs to a pleased assemblage, both afternoon and evening. Mr. Hughes had the contract for decorating the College of Physicians and Surgeons during the Medical Convention last week.

The A. L. Randall Company is receiving daily some extra fine lily of the valley, the stems running as long as 18 inches.

At the Lincoln Park conservatories there is at the present time a display of flowering plants which should interest every florist. Prominent among them is a collection of large flowered hybrid schizanthus, the "poor man's orchid." The orchid display is really fine for the time of year. Among the cattleyas are C. Mossiae, C. Mendellii, C. Gaskelliana, C. Warnerii, C. cirina, the tulip orchid, and C. Mrs. H. G. Selfridge, a beautiful variety with white sepals, yellow throat, purple veined and deep purple lip. Quite a number of lilies are in bloom, including two or three interesting hybrids. One, the result of a cross between L. cinnabarina and L. tenebrosa, throws flowers with deep orange sepals, yellow throats and cardinal lips. Another, L. Latoua, a hybrid of L. cinnabarina and L. purpurata, is similar, but the sepals are of a lighter orange, and there is less yellow in the throat and the lip is of deep crimson. Other orchids in flower are Lelia majalis, L. grandis tenebrosa, Oncidium varicosum Rogersii, Odontoglossum citrosimum, brassavola and epidendrum. The grand Allamanda Hendersoni, and the bougainvillea are in their flowering seasons, and very attractive; and extensive collections of pelargoniums, and fuchsias are equally interesting.

At Crown Point, Ind., Otto Greuter is erecting two 200-foot greenhouses and a 200-foot lean-to. A building 50 feet

by 30 feet is already completed, and will contain a boiler room, potting shed, living rooms and office. Mr. Greuter is a brother-in-law of Alon Frey, head gardener at Lincoln Park, and the site of the greenhouses is on a tract of land acquired by Mr. Frey some years ago. Mr. Greuter is a native of Winterthur, Switzerland, and a son of the proprietor of a large greenhouse establishment there. Besides a thorough experience obtained in his father's greenhouses, he has been connected with horticultural interests in England and France. The new establishment when completed will be operated under the style of the Rose Lawn Nurseries, and will probably be devoted to growing of fine bedding stock.

A. Agerholm of Onarga, Ia., Emil Pielke of Geneva, Ill., and H. C. Blawitt of Des Plaines, Ill., recently elected members of the Chicago Florists' Club, were present at the club meeting last Thursday night and responded to the call of the chair for short addresses.

A. Lange will move his retail store into larger quarters at 42 E. Madison street, adjoining his present location, about July 1. The business long ago outgrew the facilities afforded at No. 40, and the change will be appreciated by all connected with it.

Chas. W. McKellar reports the demand for orchids very good so far this month. He is receiving this week some fine Cattleya gigas, stems carrying as many as eight blooms.

Weiland & Risch have finished two of the six new houses they are erecting at their Evanston establishment, and are working on the others as rapidly as possible. When completed the establishment will comprise four ranges of houses approximating 300,000 square feet of glass. The new range will be planted to roses, a liberal benching being given a new red variety, which is full of promise as a commercial sort.

J. A. Budlong is receiving some fine peonies, the cut of the Peterson Nurseries, and on the counters of the J. B. Deamud Company are to be seen several of the grand peonia varieties from Vaughan's greenhouses at Western Springs.

Hauswirth furnished the decorations at the Dawes banquet to the Republican party leaders in the gold banquet hall of the Congress Hotel on Monday night last.

J. H. PEPPER.

Syracuse, N. Y.

Memorial Day trade here was very good; in fact, it is growing year by year. There was a large call for potted plants in bloom, as indoor flowers with most of the florists were scarce, owing to the long-continued dull weather, which has continued throughout the Fall, Winter and Spring.

The season is very backward and there is a great deal of bedding out still to be done. In my twenty-eight years' residence here I cannot recall the time when it was so late.

The weather has been most changeable; many feared a frost on the 5th and 6th; since then it has been excessively hot, the glass registering 94 in the shade several days.

P. R. Quindan is adding largely to his stock of orchids, which he intends to grow extensively, as there is a growing demand for them here.

H. V.

Newport, R. I.

The first of June is the date when the florists who do business here on Bellevue avenue in Summer usually open up. The following firms are now represented at their old stands: Snythe & Wadley, Joseph Leikens and the Hodgson-Spaullding Company.

H. A. Slobrecht, it is reported, will not open up this season at his establishment on the Parson-Stevens estate, which he has occupied for the past six years.

There is not much doing as yet, and it is too early to predict just what the season is to be.

Fred Ziegler, who has been open since early Spring, has been making some elegant window displays.

The season is considerably behind that of New York; peonies are just beginning to come in, and hardy roses are expected by the middle of the week.

Mr. William Galvin, who has been in rather poor health this Spring, is greatly improved, and able to be about again.

ALEX. MACLELLAN.

ROBERT SIMPSON,
CLIFTON, N. J.

Baltimore.

To retail florists, business conditions, as could reasonably be expected during the height of commencement season, are very satisfactory.

The nurserymen have done very well and they are still quite busy planting and ornamenting suburban home grounds. The Suburban Park and Development Companies have established a large number of cottage settlements in various sections of Baltimore and surrounding counties; this has given quite an impetus to landscape work and great prospects for the future.

The bedding-out season is practically completed; the floral decoration in the parks and squares is up to its standard and a number of very artistic designs are to be seen. Great interest and admiration are shown by the people in artistic carpet bedding, and it goes to prove that the echeveria, and other succulents, as well as alternanthera and the many highly-colored foliage plants, are coming into popular favor; indeed, they are the only satisfactory plants that should be used along dusty roadways, city squares and triangles, where heat is excessive and where the city department's sprinkling wagons do not come around often enough to keep down dust.

In Baltimore experience has taught us that canna, geraniums, and other flowering plants cannot exist under such conditions; satisfactory beds of flowering plants can only be seen in the larger public squares where the beds are farther removed from the streets. Artistic beds of simple design, with crotons, or other smooth, glossy and high-colored foliage plants in the center, with echeveria, impatiens and alternanthera for borders, provide the proper solution of this question: the bed can get a frequent sprinkling, or dust wash, and will always look well. Canna, a soft foliaged plant, will not do in such places.

Mr. and Mrs. R. Vincent have arrived home, hale and hearty, and much benefited by their European trip; they have many interesting stories of their travels.

The annual outing of the Gardeners' Club was held on Thursday, June 11, at Blenheim, the country home of Wm. Lanchan, Jacob H. Keplinger, superintendent of the Blenheim estate, had charge of the arrangements for the reception of the club.

C. L. SEYBOLD.

New Orleans.

A chrysanthemum and flower show will be given by the New Orleans Horticultural Society on November 12, 13, 14 and 15, and over \$500 will be given in prizes. The flower show was practically decided upon at a recent meeting. No place has been secured for the exhibition as yet, but it is supposed that Lafayette Square or some other centrally located section of the city will be chosen.

J. A. Newsham is chairman of the arrangement committee, with Charles Eble, ex-officio, and H. Papworth, J. Stecker, P. Abele, B. M. Wicher, M. M. de Lapoyade, C. W. Eichling, P. A. Chopin, R. Eichling and Chas. P. Panter members.

The association indorsed the Crop Pest Commission. A communication on the black ant, the most destructive that the gardeners have to deal with, from Professor Newell, was read and very much enjoyed.

Hon. Martin Behrman was elected an honorary member and Mr. and Mrs. Alost thanked for their dinner some few weeks ago. The Stecker Seed Company was also thanked for their use of its wagons.

W. M. RIGGS, Director.

Dear Mr. Pearce: May 29, 1907.
We have just received the larger Tobey heater and within a few days we will install this and return the smaller one to the J. L. Mott Iron Works. We are turning over to our treasurer for payment the balance due you, which amounts to \$200.00. In concluding this transaction, I desire to express to you my hearty appreciation of the excellence of your work, and the honesty and courtesy of your methods. We believe that we have one of the best greenhouses in the South, and any time that you need a good word, I hope you will not fail to call on us. Yours truly, W. M. RIGGS, Director.

TALKS ON GREENHOUSE MATERIAL

No. 6

While it is true that in using our material you will save money on the paint, the painting, the roofing and the repair bill, it is also true that you will not have the worry and bother that goes along with all "cheap" material. You'll have the satisfaction of knowing that you are dealing with a firm that is strictly honest and that your greenhouse is really built of the highest grade materials—we positively do not misrepresent our goods to be just what we claim them to be. It is enough to know that you save as much on the painting and paint to offset any difference in the first cost of material, but when you add to this all the other items on which you actually save money, isn't it convincing?

The man who is thinking of building a greenhouse will do well to consider every point carefully before he decides on buying his material. Remember that you can depend on what we say as being the truth; you can place confidence in us and you'll not be disappointed.

Mastica is elastic and tenacious, admits of expansion and contraction. Putty becomes hard and brittle. Broken glass more easily removed without breaking of other glass as occurs with hard putty. Lasts longer than putty. Easy to apply.

Truss House Bar Semi-Iron House Bar Iron Frame House Bar

Let's
Make Comparisons

1. Bar used in Truss Houses.
2. Bar used in Semi-Iron House.
3. Bar used in Iron Frame House.

Strength and greatest lightness is what you are looking for in a house, isn't it?

But strength and durability do not always go together. Let us explain: A 5-inch wooden post is plenty strong to start with, but it doesn't stay strong, while our guaranteed iron post is about a third the size and keeps on being just as strong after thirty years' of actual test.

To carry our argument still further—then the house requiring the largest roof bar, (No. 1), is not necessarily the strongest house.

Our Semi-Iron, (No. 2), with its clamped column frame is a close second to the Iron Frame, but for an out-and-out investment there is nothing that approaches our Iron Frame House, (No. 3.) And this is not running down the other two, but simply being truthfully frank, entirely for your benefit.

Send for circulars on all three houses, and come to your own conclusion.

Pansy

Famous Strains of Mammoth Mixed Pansies.

S. & W. Co.'s

NON PLUS ULTRA

Our Non Plus Ultra Pansy is a mixture containing the largest, handsomest, most perfect varieties ever sent out. The beautiful coloring and variety of marking give a bed of these pansies a most brilliant appearance. The seed having been saved from the greatest assortment of types, including only the best of Giant Cassiers, Burgots, Trimardeaux and Giant English, French and German strains. Finest mixed, per trade pkt., 25c.; per 1/4 oz., \$1.50; per oz., \$5.00.

Pansy—Non Plus Ultra

WORLD'S BEST MIXTURE

This mixture is the result of careful selection, from the very largest and finest pansies, of all the varieties; and we can safely say that a better or finer strain it is impossible to get. Per trade pkt., 50c.; per 1000 seeds, \$1.25; per 5000 seeds, \$5.00.

Very Large Flowering Varieties

These are remarkably large Pansies, which, for size of flowers and robust growth, eclipse all other strains. Their range of color has heretofore been limited, but this season we are able to offer several grand new varieties.

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION
George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

IMPORTS OF SEEDS, ETC.—June 9.—S. D. Crosby & Company, 26 bushels garden seed; J. M. Thorburn & Company, eight bushels garden seed. June 10.—Peter Henderson & Company, five cases plants. June 15.—J. M. Thorburn & Company, 18 bushels grass seed.

COMMITTEE ON SEEDS.—We have been advised that the following members of the New York Produce Exchange have just been appointed by the president to serve on the committee on seeds for the ensuing year: Wm. Jacot, Marshall H. Duryea, Ernest Wehnecke, O. W. F. Randolph, Chas. Wimmer.

BALTIMORE, MD.—J. Bolgiano & Son, seed merchants, have opened a poultry food manufacturing plant here. The plant has a capacity of over 250,000 bushels of food a year. Mr. Bolgiano says the food trade has increased rapidly in the last few years, and he is shipping large quantities to all parts of the United States.

CULINARY PEAS.—Seed of Velocity and Gradus were planted in northern Jersey, March 30, one 75-foot row of each variety, seed of Velocity having been received direct from England. The weather conditions were, on the whole, favorable, although considerable cold weather was encountered in April. Both varieties made a splendid growth, and at time of maturity Gradus averaged about 3 inches higher than Velocity, the latter being much smaller in foliage. The first picking of Velocity was made June 7, but it was not until June 9 that the pods were absolutely full, at which time a second heavy picking was made. The first picking of Gradus was made June 15, showing Velocity to be fully seven days ahead of Gradus in maturing; thus, as an extra early pea, Velocity shows well to the front.

European Notes.

The hot wave from the North Pole has traveled south very rapidly and developed intensity in its progress, so that southern Europe is just now like a seething caldron and the different crops are developing with a rapidity truly remarkable.

Onion is improving wonderfully and if our European varieties, particularly the common flat yellow, were adapted to your climate they could be bought for a mere song. Owing to a slack sale of the bulbs during the winter, the acreage planted is simply immense, fully sufficient for two years' consumption, while the quantity of yearling seed on hand is very great. Globe onions are not so abundant and a good clearance of these was effected last season.

The greatly reduced acreages of beet and mangel planted this year has caused growers to hustle round for other crops to take their place; the result is that snap (dwarf) beans have been planted, sufficient, in the opinion of one of the oldest French growers, to reasonably satisfy the demands for the next five years. While beets will of necessity advance in price it is hardly probable that the reduced acreage of mangel will cause any great advance in price except for

Stokes Seed Store.

219 Market Street, PHILADELPHIA

the mammoth long red. Already dealers are besieging the growers of this article and advance orders are freely offered at 30 to 40 per cent. above last October figures.

So far as Europe is concerned the highly valuable half-sugar mangels are not so well appreciated (France excepted) as they deserve to be. Growers, in consequence of the limited acreage standing, are hoping to obtain a small advance on last season's prices, but the quantity of yearling seed on hand makes it doubtful if they will succeed.

Your correspondents who are interested in sweet peas have on several occasions called attention to the lack of appreciation of this beautiful flower on the part of the French people. It is therefore a very significant fact that the tricolor bouquet presented to President Fallières on leaving England by the officers of the French Man of War "Leon Gambetta" was composed of red, white and blue sweet peas. This should be cheering news to California.

As regards other flower seeds, pansies are prospering and promise a good crop. It is needed. Wallflowers are dying off rapidly, owing to the heat, but the crop of the single-flowered varieties will be large enough. Nasturtiums are moving at last, but the acreage is very much reduced.

Sweet peas sown in November last are making up well and will soon be at their best. The sowings of several of the new and very expensive varieties are a source of much annoyance.

EUROPEAN SEEDS.

Seed Trade Notes.

Trade in every branch of the seed business is now clearly showing the end of the planting season; there are still quite a few last filling-in orders coming at both wholesale and retail, but their aggregate amount is small when compared with recent heavy sales. But, of course, now we expect the end of the Spring seed business; which, on the whole, has been most satisfactory, and, indeed, to speak frankly, very much larger than any of us expected, or it might be said even dared to hope for so soon after the financial panic of last October. Plant sales continue in quite goodly volume, especially in bedding plants; this long stringing-out of both the vegetable and flowering plant business this season, is no doubt largely due to the continuing rainy weather, which on the one hand keeps interrupting the work of planting, and on the other encourages continued setting-out of everything at all seasonable in this line.

As regards the outlook for the coming seed crops for 1909 sales, growers are as yet most conservative in giving opinions regarding the hoped-for final results. If we could only now have some general good growing weather for a few weeks, the situation as a whole would be very much improved, for there can be no question but that in many sections the long and still continuing rainy and consequently sunless weather is making itself quite adversely felt.

The Midsummer catalogues are appearing, and early indications would all seem to point to an especially good business in potted strawberry plants, and cbery plants, as well as turnip, mangold, beet, and other seeds for late planting. Vine seeds in all the popular sorts of cucumbers, melons and squashes, have since the first of June enjoyed particularly large sales, and will continue to do so for at least another month.

Grass and clover seeds are beginning at last to show signs of somewhat lower prices; this is very satisfactory to the trade as a whole, as there can be no question but that the high rates prevailing in this line for so long have very materially curtailed orders. One reason for the persistent high rates for everything in this line the past season would seem to have been the increased demand for the better grades of seeds of both grasses and clovers, which, no doubt, has been directly caused by the persistent Government and State agitations and in-

vestigations along this line, the natural result of which has been a much larger and wide-spread demand for the very highest grades of everything in grass and clover seeds. Planters now require very little urging to supply their needs with the best qualities obtainable. V.

Iowa Seed Dealers' Association.

That the pure seed law of Iowa, which went into effect July 4, 1907, and which after a year's trial has been found defective, should be changed and amended was the decision reached by the Iowa Seed Dealers' Association, which met in second annual convention last week. The provisions of the law were literally torn to pieces by the seedsmen who attended the convention in the discussions which were held.

For several hours State Commissioner H. R. Wright stood before the convention and answered questions asked by the seedsmen in regard to the law. Mr. Wright heartily agreed with the members of the organization that the law is unsatisfactory and needs to be changed.

The chief objection found with the present pure seed law is that there is no way to get after small town seed dealers who receive consignments of seeds marked "unclean seeds; to be re-cleaned," and remove these tags, selling the seeds as the cleaned product. Mr. Wright said that the law should be changed so that farmers could take samples of seeds to some State commission which would examine the seeds and label them according to the impurities. In this way the farmer would be informed as to the quality of the seeds and could sell them only under the tag.

Professor L. H. Pammel of Ames, one of the three framers of the seed law, said that since the law has had a year's practical test he has seen its defects and admitted that it needed remedy. He said that there should be provision for a State commission to set a standard of seeds. He also declared that he favored an amendment to the law which will take in under the pure seed law all vegetable and flower seeds, as well as agricultural and

field seeds which are now covered by the law.

Commissioner Wright said that during the past year he has observed between 500 and 1,000 cases of where seed dealers might be prosecuted under the pure seed law but because of the law being a new one he had overlooked minor offenses. He declared, however, that in the future he would prosecute every violation of the provisions of the law.

C. N. Page, of the Iowa Seed Company, president of the organization, addressed the convention on the pure seed law. He outlined the objections against it and declared that a remedy must be found. In speaking on the subject, he said, in part:

"When we first met a year ago and formed this organization we were impelled to do so, for, as we thought, mutual protection against the drastic provisions of a law which was unfair to the Iowa seed trade. The so-called Iowa pure seed law as originally prepared, if it had been strictly enforced, would have driven all reputable, responsible dealers out of business or out of the State, but through the joint endeavors and quick, earnest work of some of our members we secured thirty-eight changes in the law before its passage. Its provisions are still too strict, and a careful examination reveals many errors which should be corrected by the next session of legislature, and I would recommend that during this convention we consider the law in detail and suggest such changes as we deem essential. It may be desired, also, to appoint a strong committee to properly present our case before the legislature."

"Many of the States have now adopted seed laws, but those who have made them a study, declare that the Iowa law is decidedly the most common sense and unobjectionable of them all, and it should be, as Iowa is beyond question the best agricultural State in the Union. It is, however, only by comparison with some others which are decidedly bad that we are able to discover any good features in the law. If properly enforced, it might make the quality of seeds sold by the country merchants better, but I am convinced that the regular seed dealers of the State are honestly endeavoring to handle the purest and best grades of seed obtainable.

"Aside from the clearly apparent er-

rors and the features which are unpractical and which could not be enforced, the most objectionable part is that it unfairly restricts the legitimate, honest, seedsmen, compelling him to handle only the finest grades obtainable, for which he is obliged to pay an almost prohibitive price and at the same time throws down the bars and invites the shipment, into our State, of the lowest grades of seeds imaginable. There is a demand for cheap seeds from the farmers as well as the small dealers, and seedsmen in Illinois, Missouri, Wisconsin and other States are permitted to ship in the poorest grades of seeds obtainable, many of them particularly foul with eastern and foreign seeds to ruin our Iowa lands, while the law is such that the sale of a large per centage of the seeds grown by the farmers of our own State is prohibited. Thus the home grown seeds containing comparatively innocent impurities must be exported from the State to be replaced by foul, noxious, eastern or foreign seed. The next session of the legislature should correct this."

Professor Holden of Ames spoke of the annual show of the Corn Growers' Association to be held in Omaha in October. Professor Holden said that Chicago had demanded a deposit of \$5,000 for the show and that it was then decided to hold the show at Omaha. He asked the association to co-operate to make the show a success by taking a large display of seeds, representative of Iowa, to be exhibited at the show, which is to be a combined corn and cereal exhibition.

Professor B. W. Crossley of Ames spoke to the convention, asking that the association and the college co-operate in the matter of carrying up the standard of Iowa seeds. His remarks were met with approval and President Page assured the speaker that the association would be glad to co-operate with the college in the matter of seeds.

Others who spoke were James Atkinson, editor of the Homestead and George W. Franklin, editor of the Register and Farmer.

The meeting was declared a very successful session. Nine members were added to the enrollment and the reports of committees showed that great headway has been made during the year of the organization's existence. The afternoon session was followed by a dinner, at which the seedsmen were entertained by the Iowa Seed Company.

President C. N. Page of Des Moines was re-elected. The other officers are: Henry Field, Shenandoah, vice-president; J. L. Hamilton, Cedar Rapids, treasurer; W. C. Adams, Decorah, secretary. The matter of selecting the place for the next annual convention was referred to the executive committee.

A legislation committee was appointed, consisting of C. N. Page, H. H. Johns of Sioux City, and W. C. Adams of Decorah. H. H. Johns was appointed chairman of a committee to take up the matter of securing better freight rates for shippers of seeds.

Among those present were: Mel. L. Webster, Independence; H. H. Johns, Sioux City; C. G. Ouren and O. Younkerman, Council Bluffs; E. M. Cole, Pella; Henry Field, J. W. Ratekin and H. E. Eaton, Shenandoah; B. H. Adams and W. C. Adams, Decorah; B. C. Hansen, Davenport; J. A. Kramer and John T. Hamilton, Cedar Rapids; J. F. Sinn, Clarinda; W. W. Vansant, Farragut; G. L. Bissell, Ottumwa; F. J. Olson, Ames; N. S. Burt, Burlington; M. Young, Jr., Winterset; William Brown, Mitchellville; besides the local dealers; E. J. Hoberger, Guthrie Lorenz Company and Iowa Seed Company.

Detroit.**Trade and News Items.**

School graduations and a couple of convention banquets made matters a little more interesting for some of our florists. To draw conclusions between supply and demand is entirely out of the question; the wholesalers are more worried as to the expense of carting the surplus away than about anything else.

Local parks are about all replanted in their Summer garb, which is getting to be a more pretentious job from year to year. The number of plants used this year, from bedding stock to palms 25 feet high, comes close to the half million mark.

The various sore fingers, etc., created through the recent ball game among the boys are all healed up and the question when the next game shall be played is uppermost with all. FRANK DANZER.

Peonies and Sweet Williams

Horticultural Hall. At the season of its best appearance there were also some lovely beds of roses, pansies and other early blooming plants in flower. This bed of mixed plants was photographed to show how well some beds can be filled by using several kinds of plants. Peonies and sweet williams compose the bulk of the plants in it, but there are a great many other plants used as well. We noticed, besides the two named, such sorts as lilies, irises, spiraeas, roses, larkspurs and baptisias, and an assortment of small-growing shrubs, so that when the peonies and sweet williams were out of flower, the bed was still full of plants for Summer; an old-fashioned mixed plant bed, in fact. The best display of flowers for the season was when the photograph was taken in the month of June, and it shows the features of the bed at that season.

The tall tree in the distance is a pyramidal form of the ginkgo, *Salisburia adiantifolia*. The ginkgo varies greatly in character; some are much more spreading than others. Pruning when young adds to their bushiness, but some are naturally much more spreading than others. The large bed of shrubs on the right consists of rhododendrons, azaleas and various shrubs. *Hydrangea paniculata*, the upright flowered one, is there; there are *Spiraea Anthony Waterer* and a few other Summer-flowering shrubs; while quite a few tall-growing herbaceous plants, such as foxgloves and *Lobelia cardinalis*, are interspersed among the rest.

On the left of the drive are several shrubs or small trees, new when they were put there, but well known now, such as *Xanthocephalus sorbifolia*, *Acer polymorphum*, *Staphylea colchica*, *Syringa japonica*, *Acer latum*, together with *Exochorda grandiflora* and other nice things. The two pruned, cone-like specimens are *Carpinus betulus*. European hornbeam, always reliable and interesting in plantings.

Among the Perennials

One of the oldest known garden perennials and still wanted in all collections is the old rose campion, *Agrostemma coronaria*, the crimson-flowered one. In June, its flowering month, it is almost the most attractive plant in a large collection, and it bears scattering flowers for some time after its crop is over. It will flourish, too, in drier places than many plants will.

Spiraea aruncus, a native of our woods, is a good plant for the herbaceous garden. In appearance, it is like a huge *Spiraea (astilbe) japonica*, growing to a height of four feet, but its plumes of flowers are not as clear a white as those of *japonica*.

Digitalis grandiflora has yellow flowers, rather uncommon in this genus of plants as seen in cultivation. It is a conspicuous flower in a collection of herbaceous plants, as its spike of large yellow flowers grows two to three feet high. It is known under the names of *ambigua* and *ochroleuca*, as well as *grandiflora*.

Oenothera futeosa, Youngi, speciosa and missouriensis, all have large yellow flowers, excepting *speciosa*, which has white ones, and all are June blooming. *Missouriensis* is a particularly large-flowered one, and it has a prostrate habit of growth, but is vigorous and strong in all its parts.

Our illustration represents one of the mixed beds of flowers at Fairmount Park, Philadelphia, near Horticultural Hall.

Sweet Williams and Peonies

color of this poppy. *Papaver Rhoeas* is the old corn poppy, so familiar in the grain fields of Europe; and there are pretty double forms of this species. *Campnula rotundifolia*, the bluebell or harebell, one of the wild bell flowers of Great Britain, is always an interesting flower, with its deep blue blossoms. In moist, warm seasons, like this has been, it does extra well, its spikes making a foot of length almost. *C. latifolia*, native of the same country, is more showy, being larger in all its parts, its spikes of blue flowers reaching sometimes two feet in height. Both flower in June.

The common monkshood, *Aconitum napellus*, is one of the most beautiful of blue flowered perennials, old sort as it is. Unfortunately, it is a poisonous plant, not to the touch, however, hence it is not so often seen in gardens as it would be otherwise.

C. T. Lincoln writes that every year he loses his apple crop because of "maggots" in them, causing them to drop. This is the work of the codlin moth; and if his trees were not sprayed just as the flowers were fading no doubt the crop will drop again this year, full of "maggots." It is too late now, excepting that a spraying at this time would catch the second crop of insects, probably. The spraying as flowers fall is the main one of all.

S. D. Willard says of the Rome Beauty apple that its foliage is unequalled for ruggedness, and the fruit has a long, strong stem, strong enough to withstand heavy winds. It is of beautiful appearance, a good keeper and of good quality. It may be added that as it comes to our markets it is of fair, uniform size, and always finds a ready sale.

In view of the execration heaped on the Kieffer pear by those who first fruited it and who did not know how to ripen its fruit, it is a source of interest to those who had faith in its merits to notice how orchards containing thousands of trees of it are now being set out. We read of a Mr. Ellert, of Iowa, who has an orchard of one thousand trees of it, the trees growing in sod; and in New Jersey and many other States are to be found many orchards of them. It is not so much its flavor that sells it, as it is its good shipping and good keeping qualities, advantages that no other pear possesses.

There is never a season when enough quinces are to be had in our fruit markets. No one seems to make a business of growing them. If unprofitable it would appear that raising the price of the fruit would not be objected to. The quince likes deep, rich, moist, well-drained ground. The orange quince is the best of all.

Cherries of all kinds are bearing abundant crops this year. Even the wild Mazzards are loaded. This is good news for nurserymen, as the Mazzard is the one used for stocks chiefly, and last year the crop was a failure

everywhere, so that all stocks of it this year are reported ones, not from imported seed of last year.

Columbines, generally, one of the English types, do well when grown in a place free from much direct sunlight in the noon hours. On the east or north side of a building is a good place for it. It is a prolific bearer, has fruited fruit of the English type, which in color is yellowish green. Nurserymen safely recommend it as a good sort.

Spraying of seedling fruit stocks, cherries, pears, plums and the like, should go on all the time they are growing, and until Fall, at intervals of about a month. Some of the earliest experiments in spraying with Bordeaux proved that even in the case of two blocks of seedling pears neither of which had leaf blight, the sprayed block made better stock than the unsprayed, spraying in some way helping growth.

Preserving Old Trees

As is well known, it is but the inner bark of a tree that has life in it. The heart has no life, but so long as no decay sets in the well-doing of the tree is assured. It is when the heart begins to decay that a tree is in danger, chiefly from the spread of decay and because there is nothing to sustain it in storms, and winds are apt to throw it down. From one cause or another, many trees have lost portions of their live bark, leaving large holes displayed, and showing, too, the decayed inner part of the tree, for the wood is bound to decay when air and moisture reach it. Many a large tree has lost so much of its wood in this way that it is hollow from the ground to the top, and often when gales come such a tree comes to its end in being blown down. The value of cementing such hollows in trees is now well understood. First of all, every bit of the decayed parts is gotten out, by scraping and in other ways. Then a washing or spraying with Bordeaux mixture is given it, to destroy any fungus germs that may be there, after which the bottom is filled completely with cement. One mistake is made by some who have thus repaired their trees. They allow the cement to fill in to the outside line of the bark. This should not be; it should not be out further than the inner line of bark, for, strange as it may seem, when the cement is to the outer line the new bark forming year by year has strength enough to wedge the cement so tightly as to crack it, as many cases seem to verify. The mass of cement in the hollow of a tree acts as a pillar to it, sustaining it in gales, rendering its blowing down far less likely than were it to remain hollow; and with the ending of the decay of the heart, old trees become almost as good as new. After the cementing is finished the cement can be painted to match the color of the bark of the tree.

Notes on Fruits

A German horticultural paper refers to a white strawberry as something unknown to many persons. This may be, but as a white one, called Lemmig's White, was cultivated in Philadelphia 50 years ago, it is nothing new. Something of merit had to be claimed for it, and it was said to be of better flavor than other kinds, but no one but the disseminator appeared to think so.

When wine making was popular in Pennsylvania the Clinton, Ives, Elvira, Goethe, Catawba and Delaware grapes had to be kept by nurserymen, but the Delaware is the only one of the lot in collections to-day. For table use Concord, Worden, Moore's Early, Campbell's Early, Niagara, Lindley, Salem and Brighton are mostly called for, and these are what nurserymen list. The flavor of such old kinds as Moore's and Concord suits the general taste, evidently. JOSEPH MEEHAN.

Evergreen Privet and Other Matters

In The Florists' Exchange for February 8, 1908, in the Nursery Department, there is a paragraph relating to two sorts of evergreen privet, *Ligustrum japonicum* and *L. lucidum*, and calling attention to their value for growing in pots. As the California privet will grow here, I assume that these two varieties will also, and this leads me to ask you for a little information about some other things. There is beginning to be some little call for plants of this sort here, and I want to ask you if the magnolias, box, laurel, etc., will grow in a limestone soil? I know from my own experience that the rhododendron and azalea will not, but as to the other kinds named I do not, and hence will be very grateful for the information. Our soil here is a lime soil, and our climate beastly—extremes of heat and cold, wet and dry—and something of an ornamental nature that can be handled in pots is desirable.

Ottawa, Kan. J. E. FRIZZARD.

I think the privets would grow in your limestone soil, also magnolias and box, but am afraid kalmias would not. As you say, rhododendrons and azaleas will not; but if you wish to grow them in pots why not get a carload of good soil elsewhere for the plants? This is done here on private grounds, and is quite common with nurserymen in Europe.

I cannot say whether the privets, *lucidum* and *japonicum*, would live out with you; from what you say of your climate I should think it unlikely. They are in about hardy with us; but it is different if you think you keep them in pots. JOSEPH MEEHAN.

JOTTINGS FOR FLORISTS

BY EDWIN LONSDALE

Adiantum cuneatum and others

I read somewhere recently, but I cannot recall where, that in some quarters there seems to be a disposition to use *Adiantum cuneatum* for its cut fronds in preference to either *A. hybridum* or *A. Croweanum*, because they are less stiff, it was said, in floral work than are the fronds of the two last named. I referred the matter to Mr. Clark, head of the fern department of the Henry A. Dreer, Inc., and he said he could not understand how that could be, when both are much more durable than is the older *A. cuneatum*. The call for plants of the last named fluctuates with this firm very much; some years they cannot supply the demand, whereas during the present season there has not been so much call for it as there was in some former years.

If *A. cuneatum* is considered so much superior to the coarser growing *A. Croweanum*, on account of its superior grace why not go further and use that beautiful form of *cuneatum*, namely *A. gracillimum*? But neither of them will stand any length of time when used among cut flowers.

I asked Mr. Clark what was the difference between *A. Croweanum* and *A. hybridum*, if any. He said when plants of either were in the smaller stages of growth he would defy anyone to point out the difference, but when grown into specimens, say, in 8-inch pots or over, there could be detected a difference and went on to explain the technical differences between them. I myself would have to see the plants side by side before I could see wherein the difference lay; but Mr. Clark says there is a difference and a big difference when the increasing of the stock is under consideration. Thus, *A. Croweanum* has to be divided—and in good-sized clumps, too—when an increase in numbers is desired; but with *A. hybridum* all we have to do is to turn the plant out of the pot and slice off the bottom with all the roots intact and turn same upwards and every tip of root when exposed to the light will in due time develop into a plant. That certainly is sufficient difference to satisfy propagators and those who are offering stocks of either for sale.

Calceolaria rugosa This bright yellow shrubby *calceolaria*, which is used, or at one time was used, quite largely in Summer bedding in

Great Britain, is not nearly so often seen in America on private places or among the trade as it deserves to be. Not that it may be recommended to flower all Summer under the climatic conditions of this country, but there are lots of decorative uses to which it might be put to advantage in Springtime, that efforts ought to be made to make of it a specialty, for it cannot fail to give satisfaction where bright yellow flowers would not be out of place. There are also varieties, identical with the one under consideration, excepting in colors, which are rich tones in browns.

We had a very useful lot of the yellow variety, in 6-inch pots, that were used to excellent advantage on Stephen Girard's birthday, May 20.

One reason, I am inclined to think, why the plant is not seen so often as it might be is because it is not an easy subject to carry through the heated term successfully for use to furnish cuttings in the Fall for future use. This only applies to the plants that have become more or less exhausted by excessive flowering. The plan followed here is to take cuttings in Spring before there are signs of flowering, root same and pot into 2 1/2-inch pots and grow along in a cool, airy greenhouse, until all danger from frost is past—I really believe a little frost would do them no harm—and plant them out near to a wall we have here which furnishes shade during the hottest part of the day, where they are now looking happy and contented.

C. rugosa and its varieties may be more easily raised from seed than are the hybrid or herbaceous types, and it therefore ought to be seen more often than it is, not only on private places but commercially. As a cut flower it has not, to my knowledge, been seriously considered, but an experience that my assistant, Ernest Thomas, has had with it indicates that it might be considered favorably for that purpose. Sometime, soon after the plants here were in full bloom, a plant, through the effects of a fungus at the base, broke off. It was noticed to be in a wilting condition a short time before, and after it had been severed from its roots it was plunged into water where it revived and became apparently as fresh as ever it was when growing naturally. In due course it was sent away some distance out of town with other flowers on a sentimental mission, and, strange to say, the *calceolaria* flowers were in good condition when Mr. Thomas saw them three weeks later. What influence was brought to bear upon its lasting qualities has not yet developed, but under the circumstance it

FERNS IN FLATS

All the leading varieties, 110 clumps in a flat, can be divided. Ready July 1. Prices and terms on application.

ORCHIDS

We are now booking orders for freshly imported orchids of all leading kinds to arrive during 1903, at greatly reduced prices. Write us for information as to kinds and prices.

We have just received the following orchids: **Oncidium Tigrinum**, **O. Barceles**, **O. Forbesii**, **Sophranitis grandiflora** and **cucinea**.

LAGER & HURRELL, Summit, N. J.

ought to be worth while for others to try this *Caleocharis rugosa* for the same or at least a similar purpose.

Dianthus latifolius In order to popularize this very worthy hardy dianthus some inventive genius should give it an appropriate common name. In Dreer's catalogue it is designated the "Everblooming Sweet William," but that hardly seems a sufficiently distinctive title for something so superior to the well-known *Dianthus barbatus*.

I do not remember when anything impressed me so favorably as does this comparatively new crimson dianthus, which is now in full bloom and has been for the past two weeks. According to its pedigree it is a hybrid between a sweet william and a selected form of the annual *Dianthus chinensis*. In color its flowers are a deep rich velvety crimson, and it is at the present writing as full of its beautiful blossoms as it is possible for a plant to be.

This is its second year with us. Seed was sown under glass March, 1907, and in due time the little plants were planted outdoors, six inches apart. Most of the plants produced flowers during its first Summer. Every plant came through the Winter unscathed without protection, and after growth had commenced in the Spring, every alternative plant was transplanted a foot apart continuing the row across the experimental garden plot. As before stated, it is most certainly a very satisfactory hardy flowering plant. It possesses the three great essentials in the make-up of a popular plant; it is hardy, it is free blooming and it is of a very pleasing shade of color.

As might have been expected, plants—the result of such a violent cross, namely, a hardy perennial and an annual, for its parents show a variety of types among them. The plants are more uniform in the production of their crimson-colored flowers than in any other one particular, and among them there are with us two exceptions to that rule—these produce flowers of a deep rose pink color, one plant of which, on account of its producing fairly long stems would answer quite well as a Summer outdoor cut flower, so also would many of those producing the crimson flowers. Those plants which were transplanted this Spring grow less tall and more compact than do those that were left undisturbed and these vary a great deal in this respect, some being quite dwarf and very compact, while others are a foot or more tall. Some plants produce single flowers, while many have double flowers, yet not too double; as a rule, double flowers are more durable for cut blossoms than the singles. I have not had sufficient experience with it to know whether or not it seeds freely; generally speaking when a plant seeds freely it shortens the time of its flowering.

I expect to select some of the best and most pronounced types, lift them in the Fall and make an effort to raise some plants from cuttings, which I feel sure will prove quite interesting. It is not known to me by whom or with whom this valuable plant originated, but it would be very interesting to know whether the sweet william or the Chinese pink was the seed parent; and it would also be interesting to know what colored flowers were used. It is not often, so far as I am aware, that the Chinese pinks produce flowers of so pleasing and dark a crimson as is found in this new variety, but it is very frequently seen among sweet williams. Theoretically it would seem as though the Chinese pink was the seed parent and a crimson double-flowered sweet william furnished the pollen. If that be so, there is no reason why there should not be established as many colors in *Dianthus latifolius* as there are to be found among the *Dianthus barbatus*.

Rose Crimson Rambler When taking a trip a few days ago through the suburbs of Philadelphia I could not help thinking, when seeing so many plants in bloom, of the hardy rambler rose heading this note, how abundantly it has made good. It was in 1893 or '94 when this rose was so lavishly advertised by colored lithographs, etc., that caused me to spend a dollar, for which I secured three small though very thrifty plants. Two of these I planted for my own gratification, and the third was given to a neighbor; and it is still flourishing with two others that had been planted later, having done

duty prior as Easter gifts, and a grand show they do make. Each plant is supported by stout cedar posts and they are trained from one bush to the other forming arches. This display may be seen in the well-kept grounds of a not very large cottage, and I venture to say that no millionaire can boast of anything either inside or outside of his palatial residence that attracts more marked attention or calls forth more genuine expressions of delight than do these Crimson Rambler roses!

Here is a hint for the florist doing business in the suburbs of cities, create a demand for something good that is easily supplied. It is an easy matter in these days to carry a stock of roses, clematis and similar plants in pots ready for immediate delivery at a moment's notice when called for. Widespread nurserymen always keep such plants on hand, readily obtainable, and such plants go far to insure successful planting; thus is horticulture materially promoted.

For distant effect the Crimson Rambler leads all other roses, such a bright cheerful crimson color is it! The Philadelphia Rambler it has never been my good fortune to see when in flower, so that I have not had an opportunity thus far of making critical comparisons. Antoine Wintzer, vice-president of the Conrad & Jones Company which firm disseminated the Philadelphia Rambler, says of it that it is undoubtedly the brightest of all hardy crimson climbing roses, and I understood Mr. Wintzer to say that it is a seedling raised by Dr. Van Fleet, associate editor of *The Rural New-Yorker*, but its parentage I am not so sure about. Was it a seedling from Crimson Rambler fertilized with pollen taken from that rich crimson-flowered hybrid remontant, Victor Hugo?

Dorothy Perkins is also in bloom at this time and very beautiful it is to look upon with its well-formed pink buds in large clusters and glossy foliage, but to be planted where it may only be seen in the distance there is no comparison between it and the Crimson Rambler.

The origin of Dorothy Perkins is known to be a cross between Wichuraiana and the celebrated Madame Gabriel Luizet. That being known, could not a cross be made between Wichuraiana and a deep crimson-colored flower belonging to the same class as Mme. Gabriel Luizet, namely, the hybrid remontant, and in that way make an improvement on the foliage as found in the Crimson Rambler? For although Ramblers generally are outdoor grown, Dorothy Perkins and all the Wichuraiana hybrids, so far as I know, are less subject to mildew than is the older Crimson Rambler.

New England Dahlia Society's Show.

Schedules have been issued by Secretary Fuld for
the first annual exhibition to be given by this enter-
prising organization at Tremont Temple, Boston,
Mass., Thursday, Friday and Saturday, September
17, 18 and 19, 1908. The prize list is a most com-
prehensive one, covering some 123 classes, the
money value of the premiums aggregating about
\$700. Numerous special prizes are offered totaling
almost \$200. Three silver medals will be awarded.
The German Dahlia Society of Leipzig, offers its
silver honor medal for the largest collection of cactus
dahlias of German origin, quality to be consid-
ered. The silver medal of the Horticultural Society
of Lyons, France, will be given for the twelve most
beautiful varieties of French cactus and decorative
dahlias, and a silver gilt medal is offered by the
royal seedsmen, Dobbin & Company of Rothesay,
Scotland, to the most successful exhibitor, first prizes
counting three points; seconds, two, and thirds, one.
W. W. Rawson & Company, Boston, offer a silver
cup for the best seedling cactus dahlia of 1908,
originated and grown by a non-commercial grower.
In addition, twenty prizes will be given by W. W.
Rawson & Company for flowers of special merit
grown by boys and girls under fifteen years of age.
Another prize is for a table decoration of dahlias.

Among other donors of special prizes are H. F.
Burt, Taunton, Mass.; William F. Turner & Com-
pany, New Bedford, Mass.; W. P. Hayden, Rock-
land, Mass.; W. H. Symonds, Marblehead, Mass.;
F. L. Tinkham, Brockton, Mass.; Bessie M. Rupert,
Portland, Me.; John Blauk, Newport, R. I.; Mrs.
L. A. Towle, Everett, Mass.; R. A. Arnold, Danvers,
Mass.; Edwin S. Manuel, Newport, R. I.; George L.
Stillman, Westbury, R. I.; James Stredwick & Son,
St. Leonards-on-Sea, England; A. H. Wing-H. Lenox,
Mass.; Henry A. Orser, Inc., Philadelphia; Henry F.
Michell Company, Philadelphia; Otto Mann, Leipzig,
Germany; and J. Burrell & Company, Cambridge,
England.

The New England Dahlia Society believes that it
has not settled all difficulties in regard to varie-
ties of dahlias which have created considerable argu-
ments with respect to what classes they belong.
This has been accomplished by the provisions of
classes 86 and 87, which read as under:

Death of Alexander Wallace

Editor of this Paper

Stunned and prostrated by the blow, and the
quickness of it all, the news coming to this office
just as the last form was closing for the press, it is
our solemn task to be called upon to notify the
readers of this paper, all of whom were his friends,
and with many hundreds of whom he was pleas-
antly intimate, of the sudden death of our
personal staunch friend, of our faithful co-worker,
ALEXANDER WALLACE.

The shock is so great, the grief so poignant, that
it is impossible at this hour for the writer to more
than record the fact that Mr. Wallace has passed
away to his eternal rest; it is all so inconceivable.
In our next issue we shall endeavor to do justice
to his memory, to his capacity, to his ability, and to
his long-continued and faithful services to the cause
of horticulture and the interests which he has so
well and ably served for so many years.

Few there are like unto him.

Not being in good bodily health for several
months past Mr. Wallace finally yielded to the
advice of his near friends and sought the ad-
vice of a doctor; it was found he was suffering
from heart trouble, brought on by a complication of
physical ailments, and the doctor ordered immedi-
ate and complete rest. For ten days he remained
at home; then the path of duty appealed to him so
strongly, the desire to help others, that, pending
his intention of taking a long vacation, to begin at
the close of June, he came to the office on Monday
and Tuesday of this week, and undertook his rou-
tine work. On Tuesday night he was taken alarm-
ingly ill, and on Wednesday, June 17, at 5 p. m., his
great soul parted from his body, and went to join
his Maker.

Alexander Wallace was born in the village of
Lawrencekirk, Kincairdineshire, Scotland, November
21, 1859, and was consequently in his forty-ninth
year.

The funeral services will take place in the parlor
of the Summerfield Methodist Church, corner of
Greene and Washington avenues, Brooklyn, at
3 p. m., Saturday afternoon, and the interment will
be in Greenwood cemetery immediately following
the services.

Class No. 86. Giant Show Dahlias, including the fol-
lowing varieties: Mrs. Roosevelt, Gettysburg, W. W.
Rawson, Governor Guild, Grand Duke Alexis, General
Miles, Le Colosse, Dr. Kirtland, Cuban Giant, Meteor,
Professor Mansfield and any others similar in size and
form.

No. 87. Cactus Dahlias with coarse florets, including
the following varieties: Mrs. Charles Turner, Master
card, Mrs. J. P. Maco, Les Allées, Mistress Sorese
Dickens, Rosea Superba, Purily, Octopus, Nil Desperandum,
The Czar, Iona, Duc d'Orleans, Die Unschuld,
Lovely Eynsford, Prince of Yellows, Goliath, Miss
Gretta Park and any others of similar form.

The varieties specified for the above two classes are
barred from all other classes.

Secretary Fuld is particularly anxious that other
horticultural organizations throughout the country
giving exhibitions of dahlias, adopt the rules and
regulations of the New England Dahlia Society so
that the judging of these flowers be put on a uni-
form basis. Among the society's rules are the fol-
lowing:

In judging show dahlias approximation to the
typical form of a globe is to prevail over flattened
forms and the loosely-cupped types.

In judging pompon dahlias, the smaller size var-
ieties will have preference over the larger ones.

Society of American Florists and Ornamental Horticulturists.

Appointment of State Vice-President.

President Trendly has appointed V. E. Lambert of
Atlanta as State vice-president for the State of Georgia.
W. N. Rupp, Secretary.

William Barr.

William Barr, a wealthy merchant of Orange, N. J.,
about seventy years of age, and known for many years
as a lover of flowers, died at his residence in Llewellyn
Park on June 16. Mr. Barr gave opportunity to three
men known to the craft as prominent growers; John
Farrell, known for his exhibits at the first Madison
Square Garden shows, and recently retired, after 35
years' service; William FitzWilliam of Buffalo, and
Arthur Bodwell, now in charge of his extensive green-
houses and of whom mention has been made from time
to time in the pages of The Florists' Exchange. He was an
honorary life member of the N. J. Floricultural Society.

Allister David Rose.

Allister David Rose of Montclair, N. J., died on
June 16 of consumption in the 44th year of his age. He
was extensively known to private and commercial

circles from his connection
with both in different
parts of the country. He
served his time with his
father, David Rose, at
Ballindalloch Castle, seat
of Sir George MacPier-
son Grant. Leaving here
when quite young, he
came to America and
worked for a while at
Watertown, Mass. About
1885-8 he was head gar-
dener for Charles Pratt
of Brooklyn. He then
entered the employ of
E. G. Hill, with whom
he was only a short time,
and left to become the
foreman of the flowering
plants and chrysanthem-
ums of Pitcher and
Manda at Short Hills.

N. J. Here he was associated with Joseph A. and An-
thony Manda, Arthur Caparn and others.

For a time he was at Whitestone, L. I., and then en-
tered business in Jersey City as Rose & Garrett. It
was from here that he disseminated the chrysanthemum
Polly Rose, so widely known and extensively grown com-
mercially. At Jersey City, besides the general work of
the commercial florist, he did a great deal of window-box
work, among other places which he supplied being the
extensive factory of Colgate & Company, every window
of which had its box of flowers, and which from its
prominent position attracted universal attention.

In June, 1899, he purchased the business and houses
of A. Michie, Montclair, and for a while ran both places,
finally giving up the stand at Jersey City and confining
himself exclusively to Montclair, where he has remained,
making extensive additions to the plant in 1903, and
again last year.

In Montclair he first attracted attention by his work
in connection with the Town Improvement Association
in 1902 and afterward had the town work of bedding
in the public squares. Decorative work engaged his at-
tention, the decorations for the marriage of the grand-
daughter of Joseph Jefferson in April, 1892, being still
remembered. He took great interest in promoting the
love of flowers among the school children of Montclair
and in 1900 was one of the committee of the New Jersey
Floricultural Society for the distribution of plants among
the schools of this place and the Oranges. He was a
constant exhibitor in the flower shows of the society and
frequently acted as judge. He was among the first suc-
cessful growers of the begonia Gloire de Lorraine in
this section.

Mr. Rose was a member of the New York Florists'
Club, the N. J. Floricultural Society and a Mason.

He leaves a widow and three daughters, who are carry-
ing on the business. J. B. D.

James Leary.

James Leary, one of Newport's oldest jobbing gar-
deners, died at his residence on Wellington avenue on
Saturday the 13th from blood-poisoning. Mr. Leary
was born in Ireland, where in his younger days he taught
school. After coming to this country he took up gar-
dening, for several years being employed with M. But-
ter & Son, florists; but of late years had been doing job-
bing work on his own account. For several years he
taught night school in Newport and many of our young
men attribute to him what they know of arithmetic. He
was a man respected by all who knew him. His funeral,
which took place from St. Mary's R. C. Church on the
16th, the Rev. Edward Tierney officiating, was largely
attended. A. MacL.

"At Eighty."**An Interesting Birthday Celebration.**

On Saturday last, June 13, Mr. C. L. Allen, the well-known seedsman and author, celebrated his eightieth birthday anniversary at his home in Floral Park, N. Y. About one hundred of the friends, children and grandchildren of the veteran gathered there to congratulate him on the occasion. To this assemblage he read a paper which he has entitled "At Eighty," and we are delighted to have Mr. Allen's permission to publish it.

It is not a business paper, yet we guarantee much benefit to every business man who will take the time to peruse it. It is not in any respect a trade paper, but we take pride in the fact that it is the production of an esteemed member of the trade. The essay is the rare expression of a man of equable temperament, and of scholarly habit, who arriving at the age of eighty with mental vigor unimpaired, is enabled to look on life past, present and future with perfect equanimity, and his presentation of that which makes for all there is worth in living, is so refreshing, so grandly and so ably expressed, that we are content to depart for the time being from all that had to do with trade and barter, to lose thought of all else, in the perusal of Mr. Allen's delightful and soul-inspiring summary of life "At Eighty." Read it and be refreshed.

C. L. Allen, Floral Park, N. Y.
"At Eighty."

At Eighty.

BY C. L. ALLEN, SEEDSMAN, FLORAL PARK, N. Y.

This day another leaf has unfolded on the tree of life, another decade completed; one more than the proverbial allotment, which is usually considered the time for giving up life's work, and to rest in its twilight, if there is such a condition as rest following idleness, either of body or mind; or if the mind is alternating between hope and fear as to the condition that awaits us in the Summer or Winter beyond.

One of the greatest pleasures of life is to sit and rest in its golden sunset that is without a cloud or shadow of fear or doubt; happy and contented in the consciousness that all is well, and will remain so as long as life lasts and we are obedient to trusts imposed. Every man has a sphere of usefulness, a work for which he is specially adapted. It matters not what his special gift may be, his part is to keep doing along the line of duty imposed, and never to slacken in energy as long as strength permits.

Life's work is more than a mere bundle of petty cares and jealousies. Man was created for a purpose, not for

an ornament, but to develop manhood—not his own individuality—but the type he represents. To live is to do. Life is a trust, and no man is worthy the name who cannot recognize in his fellow man the signs of human equality. Still less worthy is he, if his head does not take counsel of his heart. Man is a man just in proportion to the love he cherishes for his fellow man, without regard to race, creed or condition.

It matters not how many years a man may have lived; if his faculties remain unimpaired, there is something for him to do, something along the line of sympathy and love, in making cheerful the hours of the disconsolate. We talk of the past time as if dreams and shadows were its only realities, while we look forward through the rosy atmosphere of hope, and with heart-beating believe in the reality of the future.

The present is only the past getting ripe and growing in richness by the experiences that life affords through duties well performed. The true life grows richer by wandering through the avenues of the past, as we go back to childhood through an avenue of flowers.

Thought crowds the mind while taking this moment's rest on our pilgrimage, soon to be ended. Upon a careful review of the past it seems to me the rarest of attainments, and the most useful, is not to grow old, but in years, beautifully and gracefully. We are not old because of the number of our years, but because of the manner of our lives. It is a lamentable fact that a large proportion of the aged are a burden to themselves and a trouble to others. The pleasures of youth excite in them no kindlier feelings than gloom, and, luckily is it, if it does not encounter angry rebuke or supercilious contempt. A goodly company of old people is a rare library of well selected authors, in contrast with a lot of old books, whose title pages are lost, and their illustrations cut out to please the children.

When a man gets beyond the age of usefulness in the business world he retires, usually with mingled feelings of sorrow and regret. His place in the world of commerce has been filled by another, perhaps by one of his own family, whose hopes may ripen to fruition—and may not. That makes no difference, his voice is silenced. The future is before him, not in the distance, but seemingly within his grasp; or, what is worse, within the influence of the inevitable that is soon to grasp him. The dread of parting with life itself casts a gloom he cannot dispel, while the uncertainty of the life beyond fills his mind with fear and dread. He can only see his *god* in his money bags, a place where the living God cannot be found.

Old age of that type is always attended with irritability, and it frets them until they become like the man with a toothache, whose irritation impelled him to kick the family cat because she was sleeping so comfortably in the sunshine.

If this state were an inevitable attendant upon advanced years, then indeed would long life be an unmitigated curse. But there is no such necessity imposed upon us. We make old age cheerless and morose in the same way we pervert all things, that is by, or through selfishness. We allow ourselves to think more of our own convenience and comfort in little matters, than we do in the happiness and improvement of others; and thus we lose the habit of sympathizing with love and joy.

The unselfish, ever willing and liberal heart is the fountain from which flows the elixir of true happiness that ripens with our years, and is the secret of a green old age. The human heart can never grow old if it takes a lively interest in the happiness of others; the heart must ever be warm to enable it to awaken in other hearts a glowing enthusiasm for the beautiful and good, the secret of the smiles that illumine the brow of old age.

To be ever cheerful—ever happy—we must look out at all times upon the welfare of others, and turn a deaf ear to every word and act that would detract from their happiness. We must get away from selfish thoughts—we must get away from ourselves, and create an intense affection for nature, and for all simple things. The human heart can never grow old if it takes a lively interest in the mating of the birds, the reproduction of flowers, and the charming beauty of the Autumn leaves, which teach us that a life truly spent is never as beautiful as when it drops into its grave. Its work is finished—it puts on the crimson and gold and departs smiling. There is no murmuring in the wood; no weeds of sorrow in the solitude.

The culmination of the season, the golden harvest and the Autumn tints, the provision for the long Winter to come, is no less beautiful, and has its analogy in our own decay and dissolution. Happy—thrice happy—are they that can look at life's golden sunset with the same cheerfulness that greets a Summer morning—the morning of youth.

Man's place in nature is to strive for, and develop the highest endowment of creative thought intrusted to us, in so far as we have any knowledge. What creations there may be in other spheres we have no means of knowing, and it matters not; our place is here, the time the ever present. In Man's creation a trust was imposed; we are commanded to grow, to develop every gift that came with our being, that we may leave the world richer than we found it, because of the part we have

taken. Not only in lands, bonds or goods, but in all that pertains to manhood. Man's virtues are his true assets. Men are not rich in proportion to what they have, but in proportion to what they *are*. It is not how much real estate a man may own, or how much stock he may have in railroads, oil or copper, but how he rates in the beatitudes, and the ten commandments that indicates true riches. It is the dividends received for kindness shown the unfortunate, when the light of hope was flickering in the sockets of their hearts overburdened with sorrow that is the best paying dividend. Shortness along these lines is the bankruptcy of the soul.

We are commanded to love our neighbors as ourselves, which is a command difficult to enforce; as the spirit of the command is, that whoever needs us is our neighbor. It is not the locality of, but the necessities of a fellowbeing that make him near to us. This is the vital element of the adage, "It is more blessed to give than to receive." The recipient does not have half the joy of the giver, because of the obligation the gift imposes. To give is the beautiful because it enhances the true riches of the giver.

It seems from careful observation and reflection that life, to a great extent, is a bundle of mistakes. A prominent one is the neglect of the acquisition of knowledge on subjects of general interest. Our children are educated—no, taught, to repeat what some one else learned through thought applied, and they get a diploma, not for what they know, but for their ability to repeat the results of thought applied, three thousand years ago.

True knowledge affords its possessor a constant fund of enjoyment in every stage of life. Doubly blest is he who has enhanced the world's knowledge through the application of his own mind and its applied industry. Such men can entertain their friends without resorting to popular amusement, which enervates rather than strengthens the mind. We should dwell as much as possible among living truths and avoid fiction as though a crime. Fiction is a beautiful blossom, but it never bears fruit; on the contrary, it impoverishes the mind. It is the ripe fruit of truth that feeds the human intellect, that enriches manhood and adorns character.

A greater mistake, one felt by all that come within its influence, is to go through life as an animated icicle giving every one a chill with whom they come in contact. A man should live like sweet Mary Howitt, whose mission was to turn the sunny side of things to human eyes. As we go through life we should take a lesson from the rose that has a smile for every one, and makes life fragrant with its memories, a fragrance that remains fresh, even in its ashes, and not cast a withering chill over every one with whom we come in contact.

Some men live like chestnut burrs, that guard their fortune with ten thousand thorns, little thinking "the boys" are anxiously awaiting behind the fence for the Autumn's frost which will soon make the old man shell out his treasures, which will vanish like the vapor of the morning. Two errors: The old man a little slow; the boys decidedly fast. A man may make a mistake in trusting his boys, but he makes a greater one when he fails to inspire them with confidence and trust; that gone his old age will become blighted, and his children will sink in the slough of despair, from which they never emerge. Make men of your boys, and you will be a boy when they are active, honorable men.

Man's greatest mistake is in giving up. To give up is to give out. The machinery of life will soon stop running if it has nothing to run for. The man that tore down his barns to build greater ones, found that when he began to take his ease, he was taken. Man was created for a purpose, to be useful along the line of his endowments. There is a diversity of callings, one as important as another. The man with the hoe is as essential as the man with the pen—perhaps more so. Both are useful—both essential and entitled to the same degree of respect.

The banker takes great pride in displaying some exquisite piece of furniture, but would not speak to the man that made it, should they meet in the street, which is all wrong. The man that produces is greater than any of his productions and should be judged by his character as well as by his artistic skill. A union of the two is true manhood, and should be recognized as such in every condition of life.

(To be Continued.)

WOMEN IN HORTICULTURE.—According to the annual report of the Horticultural College for Women, at Swanley, England, the interest in outdoor life among women is steadily increasing. The number of students graduated last year was sixty-eight. Before the end of six months more than half the number reported that they had secured good places as gardener teachers in charge of garden schools, head gardeners, under-gardeners and market gardeners. As their pay, as a rule, is as high as that received by men in similar places, the work is looked upon as very desirable among women who are fond of outdoor life.

Massachusetts Horticultural Society Rose and Peony Show.

The rose and peony show of the Massachusetts Horticultural Society on Saturday and Sunday was without question the finest of its kind seen in Boston for many years, and it is doubtful if ever any of the old-timers who always talk of the "exhibitions we used to have" saw a better exhibition—at least, so far as peonies are concerned. The displays of roses were rather disappointing, but the "peonists" amply made up for what was lacking in the roseariums and the main hall was filled to overflowing with many thousands of the gorgeous flowers. The most extensive exhibitors were E. J. Shaylor & Son, T. C. Thurlow & Company, George Hollis, Wm. Whitman and R. & J. Farquhar & Company. The latter put up an extensive collection in large vases containing many fine flowers and varieties. The only special prize awarded was a first-class certificate of merit to E. J. Shaylor for new peony *Georgiana Shaylor*.

For the collection of peonies in thirty varieties, T. C. Thurlow & Company were first; the collection included such varieties as *Cyclop*, *Duchess of Sutherland*, *Mme. M. Lemoine*, *Mr. Manning*, *Leonie*, *Princess Clothilde*, *Mme. Barillet Deschamps*, *Acona*, *Mme. Geissler*, *Lady Alexandra Duff*, *Blanche Fitzmaurice*, *Mme. Duval*, *Mlle. Rosseau*, *Virginie*, *De Candolle*, *Felix Crousse*, *Venus*, *Euphemia*, *Louis Van Houtte* and *Marshall McMahon*. In this class James McKissick was second, George Hollis third and E. J. Shaylor & Son fourth. For the collection of twelve varieties, three flowers of each, Wm. Whitman was first, E. J. Shaylor & Son second, and George Hollis third. For the best specimen bloom, James McKissick was first with *Therese* and Geo. Hollis second with *Aristocrat*. For the collection of single varieties, T. C. Thurlow & Company were first, and George Hollis second. Geo. Hollis was first for collection of twelve Japanese single varieties.

There was keen competition in the vases of blooms on long stems. For the single vase class Mrs. J. L. Gardener was first and Dr. C. G. Weld second. For the vase of twenty-five blooms, white or blush, T. C. Thurlow & Company were first with *Festiva maxima* and second with *M. Dupont*, and E. J. Shaylor & Son third, with *Baroness Schroeder*. For vase of pink or rose E. J. Shaylor & Son were first with *Pottsi alba*, T. C. Thurlow & Company second with *Modeste* and Wm. Whitman third with *Lady Bramwell*. For vase of red or crimson, T. C. Thurlow & Company were first with *Felix Crousse*, Wm. Whitman second with *Louis Van Houtte*, and Col. Fred. Mason third with *Triomphe du Nord*. Other exhibitors of peonies included I. L. Blanchard, A. H. Pewkes, Mrs. E. M. Gill and Dr. Chas. S. Minot. J. T. Batterworth exhibited Spanish irises. W. W. Rawson & Company and F. J. Rea each had a collection of hardy flowers. The prize collections of hardy perennials were made up by the Blue Hills Nurseries.

In the classes of roses the winners of the general display were W. J. Clemson, Mrs. Frederick Ayer, Mrs. E. M. Gill, Mrs. J. L. Gardener and Col. Frederick Mason, each taking prizes in the order named. In the other rose classes the exhibitors included W. J. Clemson, E. E. Lincoln, Mrs. Aaron Ward, Wm. Whitman and Mrs. Frederick Ayer.

Notes on Peonies.

Peonies are now becoming more popular every year and taking a place where they ought to among the most

A Block of Two-Year-Old Peonies at Cottage Gardens Nursery, Queens, N. Y.

choice of hardy flowers. It is to a few growers who within the past few years have worked up fine collections that their popularization is due. The present season in this locality has been exceptionally favorable to their producing perfect blooms, for we have had no cold, unseasonable weather or dashing rains to destroy them when they were developing to their most perfect beauty. The collection of E. J. Shaylor at Wellesley Hills is an exceptionally fine one, containing nearly all of the varieties that are worthy of growing. It is only a few years, about seven I believe, since Mr. Shaylor became interested in the peony, and that he has made success in getting together such a fine collection goes without saying. Of the popular market varieties he has many fine plants; of some of them I noticed whole rows, while of the rarer sorts he has more or less, according to their worth. Some of the varieties which Mr. Shaylor has a fine stock of are *Mme. Emile Lemoine*, an extra large flowered white of exceptional merit. *Mme. de Verneville* is another very fine white variety. *Asa Gray* is a good pink. *Baroness Schroeder* is another white sort, which is very fine. *Mme. M. Cahuzac* is a very dark variety but good. *Amande Rosseau* is a splendid pink, and *Mme. de Toeyeran* is a grand pink of a light shade. *Marguerite Gerard* is a fine white. *Mme. Lemoine* is very double, of a pink shade. *Aurore*, of a soft flesh pink, is good, so is *Mme. Crousse*, a pure white sort. *Marie Jacquin* is a semi-double white,

the best of this class so far. *Theresa* is one of the best varieties. *Summer Day* is a grand variety, after the style of *Festiva maxima*. *Bridesmaid* is a very soft shade of pinkish white. Other good pink sorts are *Simonne Chevalier*, *Mme. de Gallian* and *Magnifica*. *Avalanche* is one of the finest pure white sorts and *Couronne d'Or* is a grand white. *Enlida* is a fine dark sort and *Miss Brice* is one of the best dark pinks. Mr. Shaylor has been doing something, too, at raising seedlings and a batch flowering this season for the first time contains many good ones. So far he has only named one of them, and it in honor of his daughter, *Georgiana Shaylor*. He has exhibited this variety at the peony show in Boston and has just been awarded a first-class certificate of merit of the Massachusetts Horticultural Society for it. It is a large flower of a soft shell pink color, having that waxy appearance so often seen in the Japanese varieties. J. W. DUNCAN.

Peonies at the Cottage Gardens Nursery.

A few hours recently spent among the ten acres of peony fields at the above nursery, located at Queens, N. Y., just when these glorious plants were at the height of their blooming season, proved full of interest and instruction. This nursery is one of the most complete to be found in the vicinity of New York; containing, as it does, a vast collection of specimen trees and shrubs,

Alba Sulphurea.

Seedling Peony Georgiana Shaylor.

Mme. Emile Lemoine.

the representation of all stock that will live and thrive in this latitude; in addition there is a vast block of modern greenhouses devoted entirely to carnation growing for city trade. Rhododendrons and Kalinas, naturally planted under the protection of old forest trees, filled several acres of a slope, which seemed just right as to location and soil to give the plants all the encouragement needed for stalwart growth; unfortunately, a torrential rain, a few days previously, had obliterated the blooms.

Our illustration shows a block (of which there are several similar) of two-year-old peony plants in profuse blooming; an idea as to gorgeousness of color and size of bloom of which may be only partially obtained from the notes which follow. We can only describe the sight mirrored in the eyes as a riot of color and a blaze of glory.

The peony would seem to be essentially a plant for use in masses for the home grounds, large estates and parks, and R. T. Brown, the manager of the Cottage Gardens Company, reports an awakened public interest and an increasing demand for the plants for these purposes. Florists having the space to give to a showy bed of peonies should, by all means, plant one, for the display would undoubtedly stimulate their neighboring trade. As cut flowers peonies are also good property for local trade, but for shipping purposes to the cities they have a drawback to date, as a rule, in not realizing a price sufficient to counteract expense of packing and forwarding charges; two causes contribute to this, their weight and the quickness with which the blooms open and fade away.

Follows a descriptive list of the newer and more rare varieties which are listed in the very artistic and complete catalogue recently issued by this company:

Armadine Mechin. Producing large blooms in clusters, and in color a very brilliant clear amaranth.

Belle Douaisienne. A late mid-season variety, with large flowers on long stems; color clear flesh fading to nearly white, with yellow shadings and clear crimson on edges of center petals.

Boule de Neige. White, lightly sulphured; center bordered with carmine.

Cameron. A late variety, in clear deep purplish red and shaded with velvety lines.

Claire Dubois. In color a clear original pink with glossy reflex; large globular flower, center very full, convex and tufted; petals are incurved and lacinated.

Livingstone. This is one of the best late pinks. It comes in very large, full imbricated blooms, of a beautiful soft rosy pink, with silvery reflex and very strong, long stems.

Marguerite Gerard. The flowers come in immense flat shaped blooms, with broad petals, making a very showy variety. The color is flesh white, with creamy white center.

Mlle. Rousseau. Sulphur white, with pinkish flesh colored center, often shaded salmon.

Mme. Buequet. This shows a very pretty and perfectly formed bloom, with color of the darkest velvety amaranth, almost black.

Petite Renee. A very striking and showy as well as a good and lasting bloomer. The general impression as to color is of carmine purple with the center petals of clear carmine striped white with golden extremities, yellow background.

Pierre Dessert. This is claimed to be a variety of special merit. It is a very full imbricated flower, and in color is a brilliant deep amaranth, with velvety violet reflex.

Raphael. The color is a very deep garnet red, large blooms in clusters.

Among the varieties which are recommended as being some of the best for florists' use are the following: Alexander Dumas, lively brilliant pink; Charlemagne, creamy white; Couronne d'Or, snowy, with yellowish reflex; De Candolle, lively currant amaranth; Delachei, deep purple, crimson reflex, one of the most remarkable of the dark peonies; Delicatissima, clear delicate pink, a great cut flower variety; Duke of Wellington, sulphur white bloom; Duchesse De Nemours, sulphur white; Festiva maxima, snow white, undoubtedly the finest early white; Giganthea, delicate rose pink, the finest of all peonies for cut flower purposes; Gloire de Chas. Gombault, a multicolor variety; Humel Carmel, clear cherry pink; Jeanne d'Arc, soft pink; La Tulipe, delicate rose; Lady Bramwell, delicate silvery pink; Mme. Coste, tender rose; Mme. de Gallan, soft fleshy pink; Mme. de Verneville, one of the finest and most elastic, sulphur white to rosy white; Mme. Duod, bright silvery pink; Mme. Farel, glossy ash-colored pink; Mlle. Leonie Calot, soft salmon flesh; Marie Lemoine, sulphur white; Marie Stuart, flesh rose; Modeste Guerin, an extra fine variety, very fragrant; Mons. Jules Elie, the nearest to perfection in a pink peony; Queen Victoria, large, opens flesh white, one of the best cut flower varieties; Richardson's Rubra Superba, brilliant deep crimson, the latest of all peonies to bloom, best keeper of all the family; Rubra Triumphans, earliest brilliant crimson, splendid landscape variety; Sarah Bernhardt, one of the very best cut flower varieties, guards clear pink, center creamy white.

The William Scott Monument Fund.

Editor Florists' Exchange:

Enclosed please find check for \$5—my "mite" toward the William Scott monument fund, a contribution, I will admit in passing, in no wise commensurate with the esteem and admiration I entertained for the man, whose noble qualities of soul endeared him to all of us, and whose intellectual attainments unquestionably stamp him as the pillar of pillars in the history of American advanced practical horticulture.

Like Mr. McHutchison, however, I am of the opinion that individual contributions need not be large and that every florist throughout the United States, and Canada as well, might wish to contribute toward the fund for a simple monument, in order to perpetuate the memory of a man who devoted his life to a work—"Grand in scope and ennobling in character."

Your own interest, Mr. Editor, in behalf of so worthy a cause is to be commended in no uncertain terms. In this sordid, matter-of-fact world, with "each for himself and all against the rest" as the favorite slogan of the day, a spark of sentiment, pure and simple, in a trade paper is very refreshing, as well as gratifying, and might be well likened to the sudden discovery by the weary traveler of a fountain spring upon the desolate desert of Sahara.

The idea of a William Scott monument fund will, I am sure (and I have ample reason for my assertion), appeal to every member of the craft, irrespective of creed, nationality, political affiliations or even color.

Keep up the good work for success is in sight.

Philadelphia. S. S. SKIDELSKY.

Editor Florists' Exchange:

The sentiment to erect a monument to the late William Scott of Buffalo is given voice from all parts of the country. This is only reasonable when we consider the great amount of good this man did to all who follow the noble calling of florist. The nature of our occupation probably makes us more sentimental; still just as we are blazing the way for our fellow man to higher and a better regard for nature's beauties, let us also do it regarding the appreciation we should acknowledge to him who has helped us to better and more perfect performance of our duty. Let us set an example to those of other callings, and make a fact of what our sentiment causes us to think. To come closer to the practical point I would suggest that every florists' club, at its next regular meeting, under the order "New Business" open up a subscription list for the "William Scott Monument Fund." Small drops make a big lake; get busy, boys.

FRANK DANZER.

[We heartily endorse Mr. Danzer's proposition, and hope it will be carried into effect. The various traveling men, with all of whom the late Mr. Scott was a great favorite, could also help forward this very praiseworthy movement.—Ed. F. E.]

Subscriptions to Thursday, June 18.

Remembering the Railroad Employees.

Editor Florists' Exchange:

This Spring we have had a small surplus of bedding stock, and, in order that we might make the most advantageous use of it, we presented a package of twelve well-grown, 3-inch pot plants to each of the Valley Traction Company and its conductors and motormen making seventy-one packages. As we do quite an amount of shipping of plants by this line, we find that the proper treatment of a traction company pays roundly if the end; and, besides all the personal advantages gained by the kind remembrance of our carrier people, there is a soothing satisfaction in the knowledge that some heart have been cheered and some homes have been brightened by these compliments of recognition of duties well done. From former experience we have learned the fact that the great majority of railroad and traction men are true lovers of nature and its beauties.

In addition, allow me to say that our Spring bedding stock is entirely cleaned up, and we are rapidly filling up our houses with primroses (obconicas), an cinerarias. Everything points toward a good primrose season.
Shiremanstown, Pa. JOHN F. RUPP.

Since receiving the above communication, we have another letter from Mr. Rupp as follows:

"Since writing you about the plants we gave to the Valley Traction Company and its motormen and conductors, we have received a large number of acknowledgments from them in the form of very fine art post cards showing their appreciation."

Washington, D. C.**Business Gittings.**

With the closing of the public schools this week the business activity ceases and the usually busy retailer will have time to visit and learn more of interest concerning prospects and requirements for the future. The Florists' Bowling Team gave an excursion to Chesapeake Beach on June 18. This team is rapidly coming to the front by reason of its excellent scores and trophies won. The club with each ticket sold issued an extra ticket entitling the holder to compete for certain prizes to be drawn by number after reaching the Beach.

Edw. S. Schmid has added some magnificent specimen bay trees to his interesting stock which are attracting much attention. There are few finer ones to be seen in Washington. These trees seem to be increasing in popularity, the idea being with those who are fitting out an elaborate garden to use them as in the old Dutch gardens and in a like manner to the arrangement at the White House. There was a revival of the police regulation, forbidding bay trees in tubs being placed on the streets in front of stores and dwellings, but as the law, fortunately, has not been rigidly enforced, the practice continues and many other-wise unsightly places are ornamented by their use.

Some of the local seedsmen are preparing to attend the seedsmen's convention in Detroit on June 23, 24, and 25. It is understood Mr. F. W. Bogdans will be among the number.

Mr. Jas. B. McArdle, representing Vaughan's Seed Store, was in town this week booking orders for his firm.

Rain, which was much needed, fell abundantly on Monday afternoon.

JAS. L. CARBERY.

CHAMPAIGN, ILL.—At a recent meeting of the University trustees bids for erecting the horticultural building were considered. The estimated cost is \$15,527. It was decided to locate the horticultural department on the southern part of the campus. The board has been greatly handicapped by the action of Gov. Deneen in compelling it to wait for the plans of the State architect, Mr. Zimmerman of Chicago. Heretofore the best plans have been accepted, but as matters now stand, the State architect has the complete supervision of all State buildings.

ORANGE, N. J.—A special rose night was observed by the New Jersey Horticultural Society at its rooms on the 13th inst., when in addition to a large display of the queen of flowers were staged, Begonias, peonies and dianthus. A young man, C. G. Gignas, with twelve phenomenal flowers upon one stem, was suitably rewarded with the society's first-class certificate.
J. B. D.

Baltimore.**Club Outing.**

On Thursday, June 11, upon invitation of Mr. Wm. Lanahan, the Gardeners' Club visited his beautiful country estate, Blenheim, on Bellona avenue, Govanstown, for its annual outing. Over 150 guests responded to the invitation, most of them members of the club. Representatives from Washington, College Park, H. A. Dreer, Inc., and Meehan's Nursery were also present. Mr. Lanahan has made many improvements, and he is ever ready to listen to the suggestions of landscape gardeners for betterment. He has a very able man in J. H. Keplinger, who has been with him many years.

The trees, shrubs and flowers were found in perfect condition, everything well and judiciously arranged. The lawns are perfect and well kept with the aid of a motor lawn mower, which is kept in constant motion.

At 5 p. m. a game of baseball was played by two teams, consisting of members of the Gardeners' Club. The game was most interesting and unique; the short cut grass made it very slippery for the base runners; their comical antics and desperate efforts to keep on their feet and somersaulting to the base brought forth much merriment for the onlookers. The score was 12 to 11 at the end of the eighth inning, and Captain Seybold's team was declared winner over the team captained by M. Richmond. George O. Brown acted as umpire to everybody's satisfaction. At 6:30 a fine luncheon was served on beautifully decorated tables in a grove near the main entrance. After luncheon races were indulged in and more merriment was had; money prizes were given to all the men and boys taking part.

The secretary of the club, in a neat speech, presented Mrs. Lanahan and Mrs. Keplinger each with a bouquet of American Beauty roses. Mr. Lanahan invited the club to repeat its visit next year. Several of the members spoke of the beauties of the place and the officers and others expressed their appreciation for the delightful entertainment provided.
C. L. S.

READING, PA.—The peony, poppy and iris fields of Bertrand H. Farr of the Wyomissing Nurseries have been a blaze of color for some time and have attracted many visitors who were loud in their praises of the magnificent display. Mr. Farr will make an exhibit of peony flowers at Cornell this week; his collection is an extensive one. The specialties of this concern are peonies, iris, phlox and dahlias.

RIDGEWOOD, N. J. The florists of Ridgewood, N. J., all report a prosperous season. Schweinfurth, Barkham and Snyder are all feeling happy over the outcome; J. G. and A. Esler of Saddle River also got a slice of the pie.

Los Angeles, Cal.**Trade Notes.**

Gage, our wholesale florist, is bringing in some umbels of white agapanthus a foot in diameter. They are seedlings of his own growing—certainly the largest ever seen on this market.

J. Dietrich and Jack D'Ortiznae have bought out E. Meserve, the Angelus Florist at 206 West Fourth street, which will provide Mr. Dietrich with an up-town place of business to dispose of his nursery and greenhouse stock.

Asters, field-grown, were put upon the market the first of this month by a grower at Eagle Rock, who planted them last August with the thought in mind of having them in bloom for the holiday trade, with the result here named. They wholesale at 50c. to \$1 per hundred.

Howard & Smith sowed a lot of Australian tree seed early in the season, and in the lot of seedlings appeared a plant which Dr. Franceschi says is *Carumbium populifolium*, which Bailey says should be named *Homalanthus Leschenaultianus*, to be proper—certainly name enough to be formidable. This little plant has a beautifully red-colored stem, with broadly ovate leaves borne on long petioles of the same color as the stem, of a peculiar, yet beautiful shade of green, feather-veined of a bright red color. The appearance of this plant is so nearly like that of *Idesia polycarpa*, a Japanese tree, that we shall watch its growth with a great deal of interest. It seems incredible that two genera should produce subjects so nearly alike.

The Pasadena Gardeners' Association have announced a chrysanthemum show early in next November. The members of this society, with their wives, visited Howard & Smith's place at Montebella on the 7th inst., and partook of the hospitality of the firm, lunch being served in the extensive flat house.

Henry Turner, superintendent of El Rhea greenhouses, planted his new house, 45x200 feet, the last week in May, to roses, and expects to begin cutting the 15th of August. His Mme. Abel Chateau, which he began to cut August 12 last year, are yet producing fine blooms on long stems, which wholesale at 3c. to 5c. each.
P. D. B.

Tarrytown, N. Y.

The annual June exhibition of the Tarrytown Horticultural Society, held in the Music Hall on Friday the 12th, eclipsed all previous ones. There was a magnificent display of roses in perfect shape and colors, and staged on five large tables; one exhibitor alone had over one hundred varieties of hybrids, perpetuums and teas, the majority of them correctly named. Frau Karl Druschki was very much in evidence, having been entered in many classes, and carried off the honors wherever perfect. Competition was very keen in every class and judging difficult.

Strawberries were also fine, large and well finished, all the classes being heavily entered. Single plate entries numbered eleven and the majority of them were perfect in every way. Shrubs were lacking, only two exhibits being staged and these common varieties. *Perennia* were fine, two exhibitors having over 50 varieties each well labeled. Th. F. R. Pierson Company had some large exhibits of miscellaneous plants and cut flowers, not for competition, but very interesting. An innovation which proved very successful and interesting was the giving of two prizes for bouquets of wild flowers, open only to school children under 14 years of age; this brought out 24 contestants, the judging being eagerly watched by the young contingent.
L. A. M.

HANCOCK, MICH.—A. M. Yorl florist, has made plans for the remodeling of the store where his *Laurium* branch is located because of his growing trade and the increasing demands on the Calumet institution. The main entrance of the remodeled establishment will be at the corner, while a glass front, facing Third street, will be put in and extensive alterations in other parts of the building will be made. The store will be managed, as heretofore, by Mr. Nordquist, who will give up her millinery trade and devote her time exclusively to the flower business.

PORT HURON, MICH.—During recent windstorm the establishment of Matthew Ullenbruch, florist, suffered considerable damage. A cement wall, six feet high and 100 feet long, which constituted the base of the building, was picked up and carried away. The loss is estimated at \$6,000 with no insurance. The most deplorable feature of the whole occurrence was the fact that as soon as the building was blown down spectators rushed over the place and stole the flowers and plants that had not already been totally destroyed.

NORTHAMPTON, MASS.—Robert B. Graves, the well-known Bridge street florist, died after a short illness on June 6. He was 88 years of age.

Newport, R. I.

A new insect, a soft-bodied green worm having a brown head, has made its appearance on the spruce trees, many of them in the Ochre Point district being badly infected.

It is expected that some fine roses will be seen at the Horticultural Society exhibition which opens on Tuesday the 23d. That date, it is considered, will be just right for the general run of hardy roses.

At the meeting of the Horticultural Society held on the 9th inst., Frank Richards of New York was present and spoke some encouraging words to the members.
A. MacL.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

Albany, N. Y.

EYRES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Boston, Mass.

WAX BROS., 143 Tremont St. Orders for New England States receive our careful attention. We are located in the theatre and shopping district. Telegraph and mail orders solicited. Satisfaction Guaranteed. Established twenty years.

Brooklyn, N. Y.

Chicago, Ill.

HAUSWIRTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Dayton, O.

W. G. MATTHEWS, FLORIST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway, J. A. Valentine, Prest. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Bridal Bouquet.

Designed by Palmer's, Buffalo, N. Y.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail order placed with us will receive careful attention.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of reasonable varieties of flowers always on hand. Wire me your orders.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of reasonable flowers always in stock; delivery facilities perfect.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

A PRACTICAL TRADE ORGANIZATION. The objects of the Nursery and Seed Trade Association, Ltd., of England are as follows:

1. To protect and promote the business of nurserymen, florists and seedsmen.
2. To collect and disseminate information calculated to protect the members of the association from fraud.
- 3.—To arrange for the speedy and economical collection of debts due to members.
4. The establishment of unity among those interested in the nursery and seed trades.
- 5.—The encouragement of the interchange of opinions on questions of importance relating to such trades.

Some 870 trade inquiries as to the financial condition of persons seeking credit were made last year. The debts collected by the association last year were as follows: By the secretary, £1211 0s. 0d.; by the solicitors, £430 11s. 0d.; making together, £5515 11s. 0d. This sum appears small, but the assistance of the association is not sought until the members have used every effort themselves. In consequence of bad times the association has had to collect debts by installments as low as 2/6, 5/6, and similar small sums.

The cactus dahlia has been selected as the official flower of the Alaska-Yukon-Pacific Exposition.

American Association of Nurserymen.

(Continuation of Report.)

President J. W. Hill, in his annual address, said that the season just closed is generally regarded as one of the best for many years. All stock, with the possible exception of Kieffer pears and some varieties of plums, have commanded unusually strong prices. The practice of wholesale men in placing surplus stock on the market late in the season at greatly reduced prices is demoralizing and should be discontinued. The subject of forest preservation should receive more attention in the various States, particularly in the Southwest. Nurserymen should become large advertisers. The live, up-to-date nurseryman can ill afford to follow listlessly in beaten paths because they led his forerunner to success; he should let the public know what he has through the medium of reputable journals that have the confidence of their readers.

Professor L. R. Taft of the Michigan Agricultural College read a paper on "The Spraying of Nursery Stock," in which he recommended spraying with Bordeaux mixture for fungous diseases, adding arsenical poisons for destroying various leaf-eating insects. For San José scale the sulphur-lime solutions are most effectual. Japan quince, mountain ash, Prunus pissardi and other shrubs and trees, for which the scale seems to have an especial liking, should be kept away from blocks of fruit trees.

John S. Kerr, Sherman, Texas, read a paper on "The Great Southwest," giving facts as to soil, climate, mineral resources and productions.

H. D. Simpson, Vincennes, Ind., gave some interesting facts on "The Pecan," which he has grown successfully in northern Florida, the yield from one tree twenty-five years old being \$100 in one year.

Judge Eugene Stark of Louisiana, Mo., read a paper entitled, "A Few Points on Improvements." Among the points suggested by him were: Support trade journals; use best land; use best

stock; use competent help; encourage inventions and exhibits; plant one-year trees; grow fewer varieties; eliminate unscrupulous dealers; employ reliable salesmen; cancel risky orders.

Professor J. J. Phillips, State Entomologist, Blacksburg, Va., contributed a paper on "Peach Yellows," giving statistics in regard to the prevalence of the disease and warning particularly against the planting of pits from diseased trees.

A paper entitled, "Elements of Success in the Nursery Business" was read by J. B. Pilkington, of Portland, Ore., and a talk given by J. Horace McFarland on "Civic Improvement."

Rochester, New York, was chosen as the next place of meeting.

The following resolution was adopted:

Whereas, the delays in the shipments of nursery material continue as a menace to the prosperity of business and are alike dissatisfactory and costly to nurserymen and to the transportation companies, therefore, be it

Resolved, That the transportation committee be, and are, hereby authorized to take up this question with the proper railroad officials, in order that a suitable system may be inaugurated that will prevent, as far as possible, these unnecessary delays in future.

Resolved, That this association dis-favors any increase in the rates of transportation on nursery material, and that the transportation committee be requested to advise the various trunk line associations of the adoption of this resolution.

The following resolution was also adopted:

Resolved, That this association emphatically favors the prompt inauguration of a parcels post system for the United States, as recommended by Post Master General George L. Von Meyer, and protests against the continuance of the antiquated and costly methods of handling parcels as now in vogue in this department of the mail service.

Resolved, That we commend the recent action of Congress in reducing the rates of foreign letter postage.

Resolved, That a copy of these resolutions be transmitted by the secretary to Post Master General Von Meyer.

In the room devoted to exhibits the most striking feature was the immense number of lithographic prints and hand-colored photographs for the advertising of fruits, shrubs and trees. Some hand printing machines were also in evidence, as well as tools for pruning, grafting and budding. An attractive display of gorgeously colored apples from the State of Washington was presented by the Great Northern Railroad Company. The Alabama Nursery Company showed a group of privet plants of various kinds which had proved hardy as far north as Massachusetts.

E. J.

Pittsburg.

Trade and News Notes.

There is very little demand for cut flowers and the wholesalers are loaded up with stock of all kinds; the most of it goes to waste. As to prices almost any offer is accepted and the street stands sell at very low figures: carnations 15c. and roses 25c. a dozen. Good roses can be had for \$2 or \$3 per hundred. There is also considerable outdoor stock, particularly sweet williams, which are in fair demand in the markets. The plantsmen are all pegging away yet, but very little is doing in their line. Plant sales this season were fairly good, but prices were entirely too low to make much profit.

J. W. Ludwig is attending the convention in Chicago, being one of the 500 members of two of our political clubs who went West to boom Knox for president.

John Bader has returned from his fishing trip; he had a splendid time and a good rest.

Robert Murdoch, who was connected with the former firm of J. R. & A. Murdoch, was operated upon for appendicitis a short time ago, but is out and well again.

Club News.

The June meeting of the Florists' Club was held last week and was fairly well attended. Karlo V. Ollilainen, assistant gardener to R. H. Boggs, was proposed for membership. It was decided to hold the annual outing on Thursday,

June 25, at Crystal Farm, Bakerstown, where the extensive plant of the Pittsburg Rose & Carnation Company is located. John Jones, P. S. Randolph and J. W. Ludwig were appointed a committee to make all necessary arrangements. The place can be reached by the P. & W. R. R., or by the Butler electric car, and is not very far from the Bakerstown station. Every member should come, particularly those who have not seen the Pittsburg Rose & Carnation Company's plant, one of the most complete establishments in the country. The subject of the meeting was outdoor blooms, mainly roses and peonies, with a competitive display for the private gardeners only. The first prize \$10, for best roses, was awarded to Mr. R. H. Boggs' gardener, N. Madsen, and the second, \$5; to R. Lilly, gardener to Mr. Thos. Barnsdall. Peonies suffered somewhat from the recent hot spell and the first prize of \$10 was not awarded, but the second, \$5, was given to N. Madsen. Mr. Cook received special mention for a fine large plant of adiantum. The Pittsburg Cut Flower Company showed some Spanish iris, phlox, pyrethrum and peonies, stock received from some of their shippers. Thomas Meehan & Sons, Germantown, Pa., sent Wichuraiana roses, but they did not arrive in very good shape. Fred Wisenbach, gardener to Mr. W. L. Mellon, showed gaillardia, coreopsis, iris, spiraea, well-grown pinks in pots, campanula and digitalis. D. Fraser, Mr. H. Frick's gardener exhibited cut roses. The Schenley Park conservatories had larkspur, digitalis and coreopsis. Mr. Ollilainen brought several quarts of fine strawberries.

Messrs. Falconer, Burki, Clark, J. W. Ludwig and the writer spent a pleasant afternoon at Mr. Boggs' place last week, being shown over it by Mr. Madsen, who has full charge. It is one of the finest places in the State, well laid out and planted with a great variety of trees and shrubbery. Fruits and vegetables of many kinds are well grown. In the conservatory the chrysanthemums were looking strong and fine; and the carnations were as good as are grown in commercial places, very strong plants and well in bloom.

E. C. REINEMAN.

Cincinnati.

News Items.

William Lodder and sister Mary of Hamilton, O., leave August 1, for an extended tour West, including Yellowstone National Park, California, Grand Canon of Colorado, etc.

Miss Florence Bartlett, the accomplished daughter of Geo. S. Bartlett, of home meal fame, will be married at her home in Newport, Ky., Monday evening, June 15. Daisies and smilax will constitute the decorations.

Park Superintendent Rodgers was thrown from his buggy one day last week and quite severely injured, both legs being badly skinned and his back severely sprained. At this writing I learn that he has just returned to his office for the first time, but it will take sometime to get all "o. k." again.

The Blaine Club, 1000 strong, pulled out for Chicago Sunday night, each decorated with a red carnation; Julius Baer had the order.

The Florists' Wire Design Company, operated by Mr. Ohmer, is progressing well. Their hanging basket trade has been fine and the quality of the designs turned out is very superior in every respect. I hope everyone will peruse Mr. Niessen's paper, read before the Philadelphia Florists' Club, and printed in The Florists' Exchange of June 6. If all retailers will give this a little study and make up their minds to give cheap sales a trial during the glutted seasons, I think they will find it will increase their business, give them control of the situation and keep the "fakir" off the street. You can call it "co-operation," or by any other name, so you keep the market cleaned up.

Fred. Weltz of Wilmington, O., was a caller during the week. He is no longer connected with the firm of Leo Weltz's Sons, but is operating independently. His long suit is large contracts with municipal corporations for parks and landscape work. He is a very competent man, of pleasing address, and makes lasting friends. His brother and nephew will continue the florist and nursery business under the old name of Leo Weltz's Sons.

THE WEEK'S WORK

Timme's Timely Teachings.

Hybrid Pyrethrums.

The hardy plant border at this time of year is brightening up things wonderfully. Iris, columbines, foxglove, pyrethrums and a number of lesser lights shine forth in all the colors imaginable, to say nothing of peonies, now nearing the close of their flowering season. But *Pyrethrum roseum hybridum grandiflorum* is my subject, and of it I can truly say that none of its companions, now in bloom, surpasses or even equals it in daintiness of color, graceful form, profusion of bloom and general effectiveness when massed together. Add to this its absolute hardiness, every plant surviving the severest or most fickle of Winters, seemingly content wherever planted and under any sort of treatment, certain every Spring to produce a wealth of superbly-built, brightly-tinted flowers on erect, long stems that, when cut, will last in good shape for nearly a fortnight, and its virtues as a plant for the hardy garden or its value commercially appear to have been fittingly set forth. That pyrethrums have been for some time, and are still a mass of bloom, though a delight to every beholder, is the only fault cut flower growers may possibly find with them. When peonies reign supreme, when roses, carnations, tree-blossoms, garden and wild flowers are carted to the market by the heaped-up wagonloads and sold by the armful at any old price, what chance to make any impression for the modestly-refined, mild-eyed pyrethrums is there or for its grower? Nevertheless, pyrethrums are invaluable for early garden effects, are much called for as such every Spring, are easily raised from seeds, which may yet be sown for next year's selling stock, and their flowers come mighty handy for the retail grower's home use.

Shasta Daisies.

Now, while among the hardy things, let us take a look at the field of Shasta daisies, coarsely robust, bold-faced creatures, as compared with pyrethrums. They are now in bud, but not in bloom for some weeks to come. And therein lies their merit. They bloom at a time when flowers are somewhat scarce, very scarce occasionally, when the wrangle with an overwhelming over-supply is over, and before the domineering asters make themselves seriously felt by those trying to make money out of other garden crops. Shasta daisies have been paying handsomely for what little care they require so far and will continue to do so for some time to come, unless growers become wiser in their ways of culture and selection of stock, a wisdom usually leading to the folly of over-production. Shasta daisies are so easily raised from seeds that nearly every one of us has had a hand in the production of countless plants, of which but a small number are actually worth having. Flowers of these seedlings, with the exception of these very few, stand no show at our markets, while those of the prime stock sell readily at a good price. This carefully selected high-class stock, however, once acquired, is by no means permanently secured property, for Shasta daisies die out by the hundreds every Winter. Unprotected in any way, they freeze to death or are lifted above ground and nothing is seen of them in the Spring but a handful of dried-up roots and stumps; covered over so carefully with tree leaves, straw or litter of any kind, they are sure to rot down to the very tips of every root. Whole fields of such valuable varieties as Alaska and Westralia have thus been lost. Finally established plants only, and these under a loosely laid cover of tree branches, preferably those from evergreen trees, are to be relied upon to come safely through our Winters.

Greenhouse Greens.

Maidenhair ferns, spoken of in a recent issue, probably claim first place among decorative greens grown under glass, as regards nicety in management or need of attention to details in their culture. As to extent in cultivation, the greenhouse varieties of asparagus easily lead. These and smilax, to produce in closely following, successive crops high-

CHAS. H. TOTTY, = = Madison, N. J.

grade strings or sprays, require a temperature during the Winter months never lower than that of a rose house, and when making new plantations of either—to be done now when every house is a hothouse—this point should receive due consideration. The need of sufficient headroom also must be thought of for the stringing of smilax and Asparagus plumosus. Next in point of importance are young, strong seedling plants, always easily to be raised or to be obtained from other growers and always to be preferred to older plants or stock to be carried along for another season. The preparation of the soil for replantings should be most thorough; a rather stiff but deeply worked-up and highly fertilized bed, preferably on solid ground, is to be the object. Good sprays of Asparagus Sprengeri are to be cut from plants, set in single or double rows into narrow, very deep, box-like benches, filled with the richest of compost.

Gutter Comanches.

The mutilation of newly-planted trees and shrubs, the uprooting of plants and ruination of flower beds, the overthrow of vases, freshly stocked with costly plants, the destruction of trellises, the breaking of glass in hotheds and private conservatories, are part of the playful pastimes some of our school children love to indulge in, according to oft-told stories of utter discouragement in garden-making and numerous complaints from customers every year. These children—boys likely, savages surely—override all rules of civil or moral rights, pretty safe from punishment, unless known or caught in the act, which they never are. Flower-adorned home grounds adjoining our public thoroughfares have thus in many cases been despoiled. Who can suggest a remedy? FRED. W. TIMME.

REVIEW OF THE MARKET

NEW YORK.—The cut flower market shows no improvement over last week. True, there is a little falling off in the supply of tea roses, but no beneficial effects have been felt on that account and prices have remained unchanged. American Beauty are still plentiful, and prices are, if anything, lower, than they were before. Among the roses coming in there is a great deal of mildewed stock, and the difficulties that the commission man has in handling this class of goods at such a time as this can better be imagined than described. So far as getting any prices for mildewed stock is concerned, it seems utterly impossible. Carnations are still coming in by the thousands and sell very poorly. Of cactylas there is a very heavy supply in the market and they are moving very unsatisfactorily; prices run anywhere from 25c. to 60c. each. It seems unfortunate that with such flowers as cactylas there should be a poor demand when they are in crop, as they are at the present time. There is a heavy supply of lilies continually, and they are offered in hundred lots at \$2 and \$3 per 100. Gardenias continue plentiful, and the supply of sweet peas seems to be heavier than has been the rule for several weeks. Peonies are still very much in evidence, though it is believed that within the next few days the end of the crop will be in sight. Lily of the valley, which for two or three weeks has sold fairly well, has again become almost a glut, and the price has dropped materially.

PHILADELPHIA.—Conditions among the florists this week are very much better than last, and a steady demand has come for white stock of all kinds to be used in design and wedding work. Weddings have been very numerous the past week or so and all the retailers are catching some of this class of work; naturally, the commission men are getting their share and in white stock they are buying from each other. American Beauty roses bring 20c. to 25c. and range down to \$2.00 for cutts. Brides run from \$6.00 to \$8.00 for best, then down to \$2.00. Orchids, 40c. to 50c. Carnations run from \$1.00 to \$2.00, and up to \$3.00 for fancy. Hairsill bring \$10.00 to \$12.00, and good stock is to be found. Peonies are going at from \$4.00 to \$6.00. Sweet peas hold at 50c. to 75c. Water lilies are very good at \$3.00 to \$4.00. The retailer is looking happier this week than for some time and is reporting some very good orders, although some are situated so that business does not get around as fast as in other parts of the city. There is not a whole lot of business being done, but that is to be expected at this season, although there is more than at this time last year.

BOSTON.—Market conditions remain in a very unsatisfactory state. There are large quantities of all kinds of flowers and prices. There are no stated prices. Roses are very plentiful and the Summer varieties are of good quality. There are lots of good carnations, but they move slowly. All other flowers are just as plentiful. Peonies now don't sell at all. The out-of-town trade has been better than the local, and those that have a regular shipping trade have been doing more business than others. J. W. D.

CINCINNATI.—Business is still on the ragged edge, but stock is also decreasing some, and, as soon as half of the stock is thrown out, the other half will fetch double the money and only half the work all around. Carnations last week did not average one-quarter of a cent each, and many sleepers were dumped. Roses are holding out much better. American Beauty is quite good; \$1.50, \$2 and \$3 being the selling price on 20, 24 and 36-inch stems. E. G. G.

INDIANAPOLIS.—The large surplus of flowers diminished materially at the close of the week and no more overloading is expected. Counter trade, with cooler weather, has improved. Many bouquets are ordered for the hospitals and sick rooms. June weddings are still numerous, but not consequential for the florist. Funeral work is generally the only ef-

fective course in the evidence of a heavy cut of stock. The national Saengerfest in the city this week has called for much flag and plant decorating. German style work, wreathing, too, is much in use. Next before have the streets present. Never before have the streets presented such a gala appearance. Hairsill of lilies are closing out well at \$12.50 per 100. Lilium auratum is more plentiful at \$15 per 100. Tubes of caudatum lilies are offered as low as \$1 per 100. Killarney roses have taken the leadership in the rose market at \$8 to \$10 per 100. Richmond, also, sell well at the same price. Midway and Brides and Madis are synonymous; the price is \$3 to \$6 per 100. Carnation prices are firmer at \$1.50 to \$2 per 100 and will remain so, as there is little good stock to draw upon. Other flowers are circumvented in sale by hily of the valley at \$1 per 100. Field-grown sweet peas of fair quality are not apt in the market at 25c. per 100. Pastel shades of indoor stock bring 50c. to \$1 per 100. Summer-garden flowers, such as candytuft, feverfew, ten-week stocks, corn flowers and nasturtiums are wont to please. Potted plants of good quality are entirely out of the market at a time when many wish them. Even good bedding stock is not obtainable. Tomlinson Hall Market is filled to overflowing with a great variety of material. Business is not brisk, as the retailers are not buying heavily, neither is the flower-loving public. J. B.

ST. LOUIS. The past week was a busy one for the local trade, as there was plenty of work to do for weddings, school commencements and large funeral orders. From now on, however, we cannot look for rushing business, as the retail and wholesale season has come to an end. There has been a large oversupply of second grade stock of all kinds, and really first class stock cannot be found in this market. All of our commission men say the past week was a good one, and they disposed of a lot of consignments at fairly good prices. For roses of the varieties, Bride, Bridesmaid, Richmond and Killarney, the top price was \$5 per 100, and as low as \$2. American Beauty, long, fancy, sold at \$3 to \$4 per dozen, and others from \$10 to \$3 per 100. In carnations the top price was \$2 per 100, and there were enough for all. Extra fine lily of the valley sold at \$3 to \$1 per 100. There is some extra quality outdoor stock in. Sweet peas are not any too good. The market holds some fine smilax, as also asparagus and fancy ferns of all kinds. ST. PATRICK.

CHICAGO.—A few days of cool weather have benefited the market to a great extent. From a condition of oversupply it has receded to a point which is more nearly the normal. Roses appear to have responded to the better growing weather to an extent which has stiffened the demand for them considerably, and the higher grades move quickly, although at prices little if any advanced. Long stemmed American Beauty are in good demand, and not too plentiful. All other varieties can be had in plenty, and of desirable quantity, and move well in all but the shorter grades. Peonies continue plentiful, but the offerings are mainly cold-storage stocks, the local cut being over. A few late varieties cut at remote points are coming in, and sell well. The supply of lily of the valley is quite inadequate for the demand, which is exceptionally good this month. Orchids, also, are on the scarce side. Carnations continue over plentiful, and in general poor in quality, consequently hard to dispose of. Large stocks are continually on hand, and bargain sales continue. A leading department store on Saturday disposed of many thousands of freshly cut blooms at ten cents a dozen, with a liberal quantity of fancy ferns thrown in with each dozen. Small quantities of Lilium auratum are arriving, and bring as high as \$1.50 per dozen. Spanish iris is plentiful and brings from 25c. to 50c. per dozen. Field daisies are arriving in wagon loads, and cannot be moved. Yellow daisies are in large supply and bring fairly good prices. Sweet peas hang fire a little on account of the quantity of outside stock arriving but long stemmed flowers still command fair prices. A few inside grown asters have made an appearance. J. H. P.

New York.

News Notes.
In view of the fact that the express companies have, with their added charges, made it so much more expensive to return empty flower boxes, it would seem advisable for those growers who can possibly do so to use paper boxes. Some of the wholesale dealers think that it would be quite feasible to substitute the paper box for the heavy wooden one now so much in use.

The wind-up of the plant auction season will come with the sales on Tuesday of the coming week. Wm. Elliott & Sons, who have had a most successful season this year, will conclude with their annual trade sale, and a splendid lot of ferns, decorative plants, palms and oranges will be offered and sold under the hammer.

The Cut Flower Exchange is paying a dividend of ten per cent, again this year. Payments are being made at the company's office, Sixth avenue and Twenty-sixth street, on Tuesday, June 16, and Tuesday, June 23.

It seems pretty well assumed that we are to have a good flower show in this city next Fall. The committee appointed at the Horticultural Society's meeting last week, among whom were representatives of the New York Florists' Club and the Society of American Florists, in addition to members from the Horticultural Society of New York, met and organized on Friday, June 19, in this city.

Ex-Governor L. Bradford Prince of New Mexico is in Flushing this week, renewing acquaintances of his boyhood days. Last Saturday he participated in the ceremonies of laying the cornerstone of the Masonic Temple in Flushing and made an address. Judge Prince will remain in Flushing a fortnight. He is a descendant of William Prince, the pioneer nurseryman of America.

The Brooklyn Retailers' Association will meet at 9 p. m. next Monday evening in the Imperial, Fulton street, Brooklyn. Every retailer doing a legitimate business in the Borough of Brooklyn is cordially invited to attend and become a member of this organization. Wm. A. Phillips is secretary.

At the home of C. L. Allen, Floral Park, N. Y., last Saturday, June 13, there was a very pleasant family gathering, the occasion being the eightieth birthday of that gentleman. Mr. Allen read a paper entitled "At Eighty," which was thoroughly enjoyed by those who were privileged to hear it.

The Carey Horticultural Company will hold an immense sale of ferns, palms and bay trees on Tuesday, June 23.

John Scott went to Newport, R. I., last Saturday and spent a few days on a combined business and pleasure trip.

B. Slim, Jr., wholesale florist at Twenty-sixth street and Sixth avenue, is enjoying a Summer's vacation in Europe.

Frank Zimmerman of College Point, L. I., is sending to the market spikes of a very fine variety of campanula. The flowers are white and semi-double, and well adapted for almost any kind of floral work.

Maurice Fuld, secretary of the New England Dahlia Society, was in the city this week, and is very enthusiastic over the coming exhibition of the New England Dahlia Society, to be held in Boston on September 17, 18 and 19. This will be the first annual show of the society.

J. K. Allen, wholesale florist at 106 West Twenty-eighth street, is receiving a fine grade of Adiantum hybridum from Lay & Brother. This fern is giving much satisfaction wherever used, it being an excellent keeper.

A light colored strain of foxglove is being received in quantities at Friendly & Schenck's. If there was only plenty of retail work going on just now the herbaceous flowers available, such as foxglove and campanula, would come in very useful.

Among other visitors this week were H. W. Beaman, Emporia, Va.; Edward A. Seidwitz, Baltimore, Md.; and P. J. Burgevin, Parthenore, N. Y.

Chicago.

The Week's News.
The Republican convention is the one thing of interest in Chicago this week. Whether the influx of visitors will result in benefit to the florists' trade remains to be seen; so far there has been little done in the way of decorations and

A. V. D. SNYDER, Ridgewood, N. J.

The retail business in general has not received any impetus.

The committee having in charge the picnic of the Chicago Florists' Club at Morton Grove, July 19, is actively at work. The official program has been drafted and splendid progress made on the business end of it. Posters are to be printed and issued this week.

Frank H. Friedley, who has for some time been connected with the establishment of Miss Belle Miller, Springfield, Ill., has arranged to take over the management of the Rocky River establishment of the Gasser estate, at Cleveland, O.

Ruth, daughter of Warren G. Matthews, the well-known florist of Dayton, O., is to be married June 24, in her own new home, 28 Floral avenue, in that city.

L. F. Dintelmann and A. S. Halstead of Belleville, Ill., called upon the trade last week while en route to the nurserymen's convention at Milwaukee.

D. T. McCarthy of D. T. McCarthy & Sons, Lockport, N. Y., is spending this week in Chicago, and is visiting different growers' establishments.

News Notes.

Vaughan & Sperry are still receiving, daily, freshly cut peonies. They come from north and northwest sections, and most of the stock is fine in quality.

Wilder S. Deamud, who is associated with his father, J. B. Deamud, of the J. B. Deamud Company, was very agreeably surprised at his father's residence on Saturday evening last, when a large number of his friends unexpectedly dropped in to celebrate his seventeenth birthday.

He was the happy recipient of a diamond stud from his mother, and a pair of diamond cuff buttons from his fiancée, as well as other nice gifts. A very sociable and pleasant evening naturally followed.

The Frohmann Brothers Company are getting a daily cut of Lilium auratum very fine in quality.

Ludwig, the Putzberg florist, is prominent in the Pennsylvania delegation to the Republican convention this week, but is finding time to call upon the trade.

P. W. Martin, 214, 4th street florist, is getting a good business for the wedding season. He is now getting down to the problem of installing a new boiler for his establishment. J. H. Peppin.

New Bedford, Mass.

Trade remains about the same as usual. There is not much doing in the cut flower line; funeral work is quite good and this uses up plenty of white flowers. Saturday last was another carnation bargain day, and they sold at 10c., 12c. and 15c. per dozen, one firm advertised 2,000 at 15c. per dozen; another 8,000 at 12c., and roses, 20,000 of them, at 20c. per dozen. The streets uptown on Saturday night presented a gala appearance, nearly everyone wearing some

kind of a flower. The regular price for carnations just now is 25c. and 35c. per dozen. Roses, \$1.25 and \$1.50 per dozen for good stock. There is still a marked call for geraniums and salvia plants. Sweet peas from outdoors are coming into bloom.
Napoleon Lemay, the Hillman street florist, is advertising a bunch of sweet peas as big as your head, for 25c. We have had some good rains recently and this has broken the dry spell. Outdoor roses are now in bloom.
Hortico.

(104) **Treatment of Marechal Niel Roses.** Early last Winter I planted two Marechal Niel roses at one end of my rose house. They have made a growth of fifteen feet, with laterals one-third that length. How shall I handle them from now on in regard to resting, cutting back, feeding, etc.? Shall I let canes grow from the bottom? When may I expect blooms and how often?
Connecticut. B.

Seeing that the Marechal Niel rose was planted only last Winter, we would allow it to complete its season's growth before attempting to prune it. We would keep it growing until the middle of July; then begin to decrease the water supply and allow the plant to gradually come to rest, although care must be taken that water is not kept away from it long enough to allow the foliage to wilt or the wood to shrivel and crack. After a partial rest—say of five or six weeks—the main shoot or lead should be shortened at the place where it is desired the rose should go no further. The lateral growths should be cut back about one-quarter of their length, and the weak or thin shoots cut away entirely. After the pruning is done, tie the rose securely in place and commence giving more water gradually, so as to induce it to break into growth again. New shoots will appear from the old canes left, and on these new shoots the flowers will come. When the rose has filled the space desired, the pruning every year will only need to be that of cutting the new wood back to within two or three eyes of the previous year's wood, just as is done in the pruning of other roses. We would not allow new canes to come up from the bottom, only when we wanted to replace some of the older canes that had become too old or injured in any way, so that they needed to be replaced. In regard to feeding the Marechal Niel rose, we would apply a mulch of barnyard manure at the time when we started the rose into growth after its Summer rest, and when the foliage was well developed, and not before that time, we would apply a good watering with liquid manure once a week. If this is done and the plant is otherwise well provided for, two, and possibly three, good crops of bloom can be had during the Winter and Spring seasons.

(105) **Manurial Values.**—I would like the opinion of some of the largest growers near New York City as to the manurial value, per ton, of pulverized and shredded manure. Is there any manurial value in air-slacked lime? If so, about what amount per barrel?
Connecticut. CONSTANT READER.

—We presume the questioner here refers to pulverized sheep manure, and we would say that this is a high-grade fertilizer and can be used with safety for almost any crop. It is a good idea to mix it with its equal bulk of soil before applying it as a mulch to any crop, as it is stronger and richer than the usual barnyard manure. Lime is valuable also as a manure, for some one or more of its salts enter into the composition of every vegetable. We have not at hand an analysis of lime showing just what manurial value it contains, but nearly all soils are benefited by a liberal dressing of lime—say, at the rate of fifty bushels to the acre.

(106) **Flowers for Name.** Please name the two flowers enclosed.
Connecticut. J. B. R.

Number one is possibly *Tragopogon pratensis*, a native of Europe, but naturalized in various States throughout the Union. It is also called goat's beard. Number two is *saxifraga* (cotyledon), but is generally sold as *Saxifraga pyramidalis*.
H. G.

ALLENDALE, N. J. The Village Improvement Association, composed entirely of ladies, has ornamented the grounds around the railway station by planting a large bed of shrubbery on one side of the track and a large bed of flowers on the other side. The planting was done by J. G. and A. Esler of Saddle River.

Room Wanted

ROOM WE MUST HAVE to place our importations of ARAUCARIAS, PALMS, BAY TREES, etc. Therefore, our entire stock of bedding plants must go at astonishingly low prices.

Look! Look! Look!

And just think!

SCARLET SAGE, the best variety in the world—the Clara Bedman or Bonfire, 4 in. pots, which used to sell at \$12.00 per 100, now \$5.00 per 100, or \$45.00 per 1000. No less than one hundred of these at this price.

BEGONIA VERNON, dwarf red and Erfordii, 4 in., 6c.; 3 in., dark dwarf Vernon, 4c.

COBÆA SCANDENS, we have about 1000 nicely staked up, 4 in. pots, about 2 feet high, to close out, 5c. each.

CANNAS, best bedding varieties, red, yellow and pink by name, large, 4 in., \$6.00 per 100.

FUCHSIAS, 4 in., big stock, 6c.

ASTERS, Victoria, 2½ in. pots, \$2.00 per 100.

SOLANUM, the newest improved variety (*Multiflorum*) produces large berries and plenty of them, 2½ in. pots, \$1.00 per 100.

COSMOS, 3 plants in a 3 in. pot, \$4.00 per 100.

Pure white **MOON VINES**, for which we have a world-wide reputation, 4 in., 12c.; 2½ in., 5c.

Plants, 2½ to 3 in. pots, at only 2c.

Heliotropes, Phlox Drummondii, Lobelia, blue, Dwarf and Trailing; Tradescantia, Verbenas, Petunias, Giant and Inimitable; Sweet Alyssum, Little Gem; Summer Chrysanthemums, Nasturtiums, Pyrethrum, white flowering; Kenilworth Ivy, Tagetes or Marigold, Eldorado and Gold

Ring; Ageratum, 3 in.; Fuchsias, Torenia Four-nieri, Dianthus, Chinese and Japanese Plinks.

BOSTON, SCOTTII and WHITMANI FERNS, 4 in., 20c. to 25c. each. **WHITMANI FERNS**, 4 in., 25c.

CLEMATIS JACKMANNI, the true variety, from Europe, 6 in. pots, 3 feet high, 35c. to 50c. each.

ARAUCARIA ROBUSTA COMPACTA, new importations, 6 in. pots, 3 tiers, \$1.25 to \$1.50. *Araucaria Excelsa Glauca*, new importations, 6 in., 3 tiers, \$1.00 to \$1.25.

ARAUCARIA EXCELSA GLAUCA, for the lawn or porch, last Spring (1907) importation. Only specimen plants can be offered of the beautiful type, 6-7 in. pots, 25-30-35-40 in. high, same in width, 6 year old, 5 tiers, \$1.75, \$2.00, \$2.50 to \$3.00 each.

Have just received from Antwerp about 5000 *Araucaria Excelsa* of all sizes. Plants, 3 tiers, 5-10-12 in., 40c.; 12 to 14 in., 50c.; above, 60c. to 75c.

KENTIA BELMOREANA, 4 in., 20 in. high, 35c.; 5 in., 20 to 25 in. high, 50c.; 5½ in. pots, 60c. to 75c.

KENTIA FORSTERIANA, 7 in. pots, 40 to 50 inches high, \$2.50 to \$3.00 each. 6 in. pots, 30 inches high, \$1.50; 6 in. pots, 25 inches high, \$1.00; 6 in. pot, 20 inches high, 75c.; 5 in. to 5½ in. pots, 50c. each.

DRACÆNA BRUANTI, 6 in., 35c.

Grand Rapids, Mich.
The Week's News.
Much needed rain came on the 13th, the first since the torrid heat and humid atmosphere of Decoration Day week. It has given field crops a start, long delayed, but which may now, if weather continues favorable, make up for lost time.
Weddings have been numerous so far this month, but the decorations as a rule are not lavish. Funeral work has been plentiful and kept all the florists busy. Shipping orders have been steady, but light in size. Out-of-town buyers having greenhouses of their own, on account of the excessive hot weather, have cut more flowers than usual for this time of year. It is this condition that makes their demands on the grower less than customary.
There is some talk among some of the lettuce and vegetable men about building, but very little is heard among the florists, although there is an exceptional case or so among the retailers; but those who grow for the open market say not this year. One florist, basing his expectations on last season's business, had 100 boxes of glass ordered, but prices were too low for profit, and he says, "I made a mistake; I won't put up any greenhouses this year."
Commencements are putting some life into the business and for another week trade will be good; then the overworked florist will take a much-needed vacation.
Carnations are getting poor in quality. Roses are growing smaller daily, except perhaps Kaiserins and Meteors. There are a nice lot of Japan lilies in prospect for a continuous Summer cut. Gigantums are about over. Plenty of peonies and they sell well.
G. F. C.

Your Mooney is well spent when you advertise in
THE FLORISTS' EXCHANGE

Kalamazoo, Mich. Trade Jottings.

The present week sees the close of the bedding out plant trade and from what I can learn, this part of our business has held up good and felt but little, if any, effects of hard times. Prices have ruled the same as previous years, geraniums, as usual, being the leaders. These sold out clean at \$1.50 per dozen, in 4-in. pots, which is the standard size for bedding here. Salvias also sold well at \$1.00 per dozen, for 3-inch stock. Cannas, verbenas and foliage plants are not called for so heavily as used to be the case, but the increased call for boxes and hanging baskets, etc., fully made up for any deficiencies of those lines.

Prices on hanging baskets and boxes seemed to me to pay for the material and time besides leaving a fair profit, which is as it should be.

Altogether, this season the plant trade has made a much better showing than the cut flower section. The latter still languishes and the commencements and June weddings combined seem unable to put life into it.

Replanting the rose houses is the principal business now and it appears the old standbys will again be largely grown in this vicinity. The Central Nursery Company will grow their entire stock of carnations inside this year, as the results of trials of last season were satisfactory. Van Bockhove & Bro. are planting 100,000 carnations this season, including large blocks of Enchantress, Lawson, Perfection and Winsor (which has made good here with all who have tried it). Boston Market and Vesper will also be largely planted by the various growers around.

Mr. Thomas has taken over the Riverside greenhouses and is now busily engaged in making extensions and other improvements. S. B.

SECOND-HAND PIPE, BOILER TUBES, COUPLINGS, ETC.

GIBLIN & CO., Utica, N. Y.

What IT Prevents

By IT we mean that cross-fire channel with side openings.

First, it prevents diagonal fire travel from front to back.

Second, it makes every section equally efficient.

Third, it pockets and extracts a larger amount of heat from the burning gases when the gases are hottest.

The "Burnham" burns hard or soft coal. Made in 52 sizes. Send for catalog.

No other boiler has cross-fire channels with side flue openings.

Talks on Greenhouse Material

No. 7

Did you ever go out to look at a horse from a stranger? You are pretty careful about making a deal weren't you? If you had gone to some old friend, or a man that you knew was honest and he made you the right price you would have bought the horse with a feeling that you were getting your money's worth. And if you didn't get what was right, you were pretty sure that it would be made right.

It is about the same kind of a deal when you buy greenhouse material. There are a hundred and one points to be considered and unless you are thoroughly acquainted with greenhouses and an expert judge of cypress you will not know whether you get the right quality of material or not. If you buy from somebody that you don't know, you want to be careful. You can't tell a horse until you give him a trial, and it's just the same with greenhouse material—you've got to use it for a few years to know whether you got value for your money, unless you are an expert. Why not buy from a firm that is recognized everywhere as a fair concern? We will be honest with you. Our cypress expert knows all the defects and they go into the kindling wood pile in place of into the greenhouse.

Our 96-page catalogue shows many views of ranges we have furnished in all parts of the country and tells all about our material. Copy of it will be sent anywhere free, on request. Get one of these catalogues and then let us talk to you about our way of doing business and about the material which we make.

JOHN C. MONINGER CO.,
CHICAGO.

RICHMOND, IND.

Helpful and Interesting.

I have found many helpful and interesting articles in your paper during this first year that I have taken it, and I desire to mention particularly Mr. Joseph Mechan's letters, which I appreciate very much. **BERTRAND H. FARR,** Penna.

This one combination fitting practically does the whole work

BENCH FITTINGS

One of our orders for bench fittings last year was from the U. S. Cut Flower Company. Eighteen houses benched throughout with these fittings.

They are easy to erect, make a rigid frame and the fittings can be used over and over again.

Send for Bench Fitting and Wiring Frame Circular.

We make every part of a Greenhouse but the glass. We sell any part.

VOL. XXV. NO. 26

NEW YORK AND CHICAGO, JUNE 27, 1908

One Dollar Per Year

Lilium Harrisii

WE offer a selected stock of the original true Harrisii for early forcing. These bulbs have been grown from the original pure Harrisii, and will be found to be splendid stock for early forcing, for which purpose Harrisii is so valuable. We have had the stock inspected, and are assured that it is almost absolutely pure and almost entirely free from disease. This is not stock picked up indiscriminately from different sources, but is grown from one stock, and will be found very superior to the ordinary Harrisii usually offered, both in regard to freedom from disease and purity, and not the late type now so often furnished.

Lilium Harrisii has been deteriorating slowly for years, and in order to get back to the true type of the original Harrisii, we have had our stock grown from the original pure stock, and it will be found very superior to the Lilium Harrisii usually offered. While the stock is A No. 1, our prices are as low as, or lower than, the prices asked for indifferent stock.

We have only a limited quantity of this stock to offer, so it will be advisable to place orders without delay in order to ensure securing this stock.

Bulbs ready for delivery middle to last of July.

Pansy

Famous Strains of Mammoth Mixed Pansies.

S. & W. Co.'s

NON PLUS ULTRA

Our Non Plus Ultra Pansy is a mixture containing the largest, handsomest, most perfect varieties ever sent out. The beautiful coloring and variety of marking give a bed of these pansies a most brilliant appearance. The seed having been saved from the greatest assortment of types, including only the best of Giant Cassiers, Bugnots, Trimardeaux and Giant English, French and German strains. Finest mixed, per trade pkt., 25c.; per 1/4 oz., \$1.50; per oz., \$5.00.

Pansy—Non Plus Ultra

WORLD'S BEST MIXTURE

This mixture is the result of careful selection, from the very largest and finest pansies, of all the varieties; and we can safely say that a better or finer strain it is impossible to get. Per trade pkt., 50c.; per 1000 seeds, \$1.25; per 5000 seeds, \$5.00.

Very Large Flowering Varieties

These are remarkably large Pansies, which, for size of flowers and robust growth, eclipse all other strains. Their range of color has heretofore been limited, but this season we are able to offer several grand new varieties.

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION

George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiauo, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

THE COMMITTEE ON SEEDS.—With reference to the duties of the Committee on Seeds of the New York Produce Exchange, we are informed that the main object of the committee is the establishing of standard grades of different seeds each season, which are traded on for the ensuing year.

European Notes.

While good rains have fallen in central France and Auvergne and in England generally, many districts, particularly in southern Europe, report destructive winds and persistent drought. In northern Italy crops which were full of promise 15 days ago are looking as if a fire had ravaged the district, and this for many miles. In Provence the same thing has happened during the early days of the present week and the destruction is terrible to see. In one respect it is fortunate that the crops are so few, for the mistral, added to the long continued drought, and the prevalent excessive heat are sufficient to destroy every green thing. Onion, leek and carrot have suffered most. Flower seeds are not yet fully developed. C. Griffith of Baltimore is in London. L. W. Bowen, after a sojourn in Italy, has reached Paris.

EUROPEAN SEEDS.

Seed Trade Notes.

For the last weeks of June, trade, in all branches of the seed business, is well up to a good average. The small retail cash counter sales are holding out well, and this branch of the orders being so satisfactory helps general conditions very materially. Peas and beans for the last planting, as well as squash, cucumber, melon, and all vine seeds, besides mangel-wurzels, turnips, carrots, etc., make up a very good volume of business in both a retail and wholesale way. There is a very much better feeling among the seedsmen and their customers, as well, than there was a year ago at this time, for the adequate reason that crops, while somewhat irregular in some sections, are on the whole in very much better shape than was then the case, and while it is even yet too soon to be sure of final results, indications at present do certainly point toward large yields of agricultural products.

As regards seed crops returns, the reports coming to hand the past week are still somewhat conflicting; so it will perhaps be more conservative to wait a little longer before trying to make estimates. Certainly, the warm weather of the past week has helped the growing crop of sweet corn very materially, and if we can once more have a crop of seed corn large enough to hold prices down to the normal, every branch of the seed trade will be wonderfully benefited. Corn, to mature properly, needs warm nights as well as hot days, so it can be truly said that present conditions are ideal for this most important crop.

There would seem to be a difference of opinion as regards the magnitude of the coming season's bulb trade. The prices at which cut bulb stock was sold

Stokes Seed Store

219 MARKET STREET, PHILADELPHIA, PA.

last season certainly averaged much below adequate profit; but not perhaps more so than various conditions have forced in past years at times. Surely, in a retail way, all varieties of Dutch bulbs are selling more and more largely, with each returning bulb planting season.

Philadelphia.

Current Notes and News.

Myers & Samtman, American Beauty specialists, are devoting two new houses in addition to the old house to the growing of their new rose Wyndmoor, which is a cross from the American Beauty and Safrano, giving it the distinction of being the only seedling rose with American Beauty parentage and the prolific blooming qualities of the Safrano. This rose seems to bear all the year round. From one house they cut over 6,000 buds last Christmas and during the month of May they secured 10,000 buds and expect to increase that figure in June. This new rose was exhibited in Chicago at the American Rose Society meeting in March and was awarded two silver cups and a certificate. Messrs. Myers & Samtman are tearing out their houses containing other roses than Wyndmoor, as cuts have ceased for the summer. Mr. Myers says that the florists' business is holding its own much better than some others, and that they did almost as well as in former years; they are very well satisfied with their business. They had a larger crop than ever before, although the total sales did not equal former years.

Henry Sonneborn, Jr., Germantown avenue, has had a fairly busy season. He sells a quantity of plants for decorative purposes and is also getting some good business in design and cut flowers. This store is tastefully decorated with ferns, cut stock and novelty boxes.

T. N. Yates & Company, Germantown avenue, reports business in bulb stock and bedding plants equally as good as that enjoyed last season, and that orders are still coming in for regular nursery stock.

Richard Umfred of S. S. Pennock-Meehan leaves Baltimore to-day on the steamship Maine to spend some time in Ireland.

S. S. Pennock-Meehan received their first shipment of asters Tuesday, and the stock was very good.

Rupert Kjenle, So. 17th street, is doing a fair business and getting some funeral work; he considers business as good as can be expected at this time.

Robert A. Stewart, Jr., of Downingtown, Pa., was in town Tuesday looking after some trade interests concerning his hardy Daggier and fancy forms.

B. Stahl, So. Eleventh street, is having considerable trade in Beauties, sweet peas and cornflower, and is getting his share of the local business.

Robert Kift, Chestnut street, reports fair business and is making plans to remodel and beautify his store and will put in a new ice box having larger capacity than the present one. The window display in this store is very attractive; it consists of water lilies in window-pan and makes a natural-looking pond with all the usual frogs, turtles and fish.

Wm. C. Smith, located at 61st and Market streets, reports an excellent business in seashore trade. He expects that some new forms will be in good shape before long, and he will then have no trouble in filling the orders coming in all the time.

Philadelphia Cut Flower Company, Sansom street, is showing some of the first cosmos to be seen in the wholesale houses and the stock in very good condition. The out-of-town business is of good size and some big orders are being received daily.

Edward Reid has a fine display of K. A. Victoria, valley and Harrisii of Eastern growth, and reports good business in out-of-town trade.

Leo Niessen Company are now among the early closers and orders must now come in early to receive attention the same day.

Mr. Dunn of the Philadelphia Floral Store, Chestnut street, reports good business in design and wedding work.

Thos. Meehan & Sons, Inc., Germantown, report fair business in potted plants, such as vines and roses and potted evergreens. At this time the entire inside force is busily engaged in assisting the regular force in annual stock taking. Mr. Joseph Meehan says they are doing something all the time and thinks the florist should put in some stock of shrubs which are going very well at this, the usual dull time for the florist.

W. E. McKissick reports good business in candytuft, feverfew and white pea; the demand for white stock still holds good.

A. E. Biester, Susquehanna avenue, is using crutches because of a painful leg, caused by being kicked by a new horse of Western breed.

Albert Rieder of Wm. H. Rieder & Bro., Susquehanna avenue, is very sick with appendicitis; he was stricken at the station, as he was about to take a train out of the city last Sunday, and had to be taken home in a cab. An operation will be performed.

Chas. E. Meehan, Musgrove and Slocum street, Germantown, is busily engaged in setting out chrysanthemum plants and repairing some of his greenhouses. Some fine green stock is to be seen at this place.

Robert Craig, 49th and Market streets, is making big preparations in expectation of good business the coming Fall and Winter. He is doing considerable shipping to distant points. He is also repairing and putting in shape some of his numerous houses. P. M. R.

Rochester, N. Y.

Trade Notes.

The flower market here has been fairly good for the past week, but on account of lack of good material, prices have not been steady. Owing to the many graduation exercises, and quite a number of small weddings, a great deal of cut material was used, there being fair demand for asparagus, cut strings, Beauty and other roses and sweet peas. Usually, the first crop of sweet peas has brought good money, but this year prices were flat, with no prospect for any advance, in spite of the good flowers being shipped in.

Taking the season all through, the plant and bedding trade was good, everyone apparently being cleared out, especially of S. A. Nutt geranium. Caladiums are left over in quantity, there being not much demand for them this season.

The iris grounds of J. B. Keller Sons were a wonderful sight this Spring, owing to the coming into bloom of a large block of freshly imported and selected varieties, the cut sprays of which sold readily for table and other uses.

COCKNEY.

PETER BROWN PANSY SEED GROWER

124 Ruby St.

LANCASTER, PA.

DENVER, COL.—A lively hailstorm struck Denver on the 15th inst. The following florists suffered more or less loss: Mrs. R. Mauff, C. J. Davis, Geo. H. Borensheir, The Park Floral Company, Colfax Avenue Floral Company, Mrs. Binsmore, J. D. Watts & Son, D. A. Grimes, Ellitch-Long Greenhouses, and Ben Boldt. All were insured except the Ellitch-Long Greenhouses and those of Ben Boldt.

WATERLOO, IA.—The following officers have been elected by the Waterloo Nursery Company: President, P. C. Schmidt, Cedar Falls; secretary, C. H. Dietrich; treasurer, F. F. Knapp. Walter Brown and F. E. Hunter will comprise the board of directors together with the above named officers. The new firm will soon be ready for operation, and will both wholesale and retail nursery stock.

J. W. DUNFORD Kings Highway and Page Bldg., St. Louis, Mo.

Success with House Plants BY LIZZIE PAGE HILLHOUSE.

A complete text-book and guide to the care, cultivation and propagation of all plants in the garden and the home.

The volume is written by a woman for women, in plain, concise language, easily understood, and the book has the special merit of giving directions which can be readily followed, the methods prescribed being of the simplest, and the material suggested to be used easily within reach of all.

12mo., 232 pp.; profusely illustrated, with complete and ready reference index to all plants enumerated. Price, Cloth, \$1.00; Paper, 50 cents.

To Retail Florists. The old thought, that it was dangerous for a customer to know much about the care of plants, has passed away, being superseded by the newer and more intelligent one, viz.: that the more successful a customer is with plants, the greater quantity will he or she buy.

We offer Special Inducements to all who wish to handle this book. It is a good seller.

WILLIAM LIVESEY, McTabe Street, NEW BEDFORD, MASS.

Pittsburg.

Jottings. The weather at present is extremely hot, in the nineties and no relief in sight. This has a bad effect on trade, which is about as dull as can be. There is plenty of stock on hand, which is sold at variable prices. Sweet peas are coming in strong but very cheap. Roses at times are scarce. The first water lilies are in. Plants are yet plentiful but mighty hard to sell. A good crop of candidum lilies is on the market and come in very handy. It is very peculiar that very few can grow this lily successfully; the bulbs in the Fall look fairly good, but the results in the Spring are unsatisfactory, very few coming to bloom.

Anton Krut, florist, Butler, Pa., is getting his place in good shape. He was very fortunate in buying his property some years ago, as the improvements made by the city have largely increased the value of his place. His storeroom property, which he bought a short time ago on the main street, is a good location, being within a square of the courthouse and he commands the best trade in Butler.

Mr. and Mrs. Gustave Ludwig have sent out invitations for the wedding of their daughter Lena to Victor F. Bergman of Chicago, the wedding to take place June 30. Mr. Bergman is with Ernst Wuenhofer, the florist on Elm street, Chicago. E. C. R.

Detroit.

Attacking Scale Diseases.

Trees and shrubs of the city of Detroit are badly infested with San Jose scale and other destructive scale diseases. Park Commissioner Philip Breitmeyer has succeeded in securing an ordinance enabling him to deal vigorously with any infested trees and shrubs in public parks and private grounds. He has the cheerful co-operation of citizens and the battle against these pernicious insects is in full swing. A number of experienced men are going through the city inspecting trees and shrubs. All infested but curable plants are labeled. "This tree (or shrub) must be sprayed." Such as are beyond cure or are already dead are tagged. "This tree (or shrub) must be removed." Men employed by the Park Board follow the inspectors and carry out the orders. FRANK DANZER.

Providence, R. I.

The Business.

The past week business was very brisk in bouquets and baskets for school graduations, wedding flowers being also in good demand. Roses, lily of the valley, sweet peas and carnations, were the principal flowers used at these functions. Stock of all kinds is showing the effect of the very hot weather we are having. With the closing of the schools comes a very quiet season among the retailers and stowmen; it gives them a chance to take their vacations and call on growers. There is a movement here by two of the largest growers to form a wholesale market this coming Fall. The trade thinks things are about ripe for one.

E. J. Johnston is building a new greenhouse, 125 feet x 30 feet.

Chas. Johnston (with E. J. Johnston) and James Lavery (with J. B. Canning) are on the sick list and confined to their homes. G. A. J.

Shrubbery Notes

The Hungarian lilac, *Syringa Josikaea*, and the Asiatic one, *villosa*, and its varieties are too seldom seen in collections.

Josikaea has dark purple flowers, the *villosa* and varieties are too seldom seen in collections. The chief value of these kinds consists in their late blooming. The flowers do not expand until all the old kinds have done. All have the lilac odor, but hardly as refreshingly fragrant as that of the old kind. A variety of *villosa*, Dr. Bretschneider, is one of the best. The habit of growth of this class of lilac is less spreading than any other.

Azalea viscosa is the last of the genus to flower in Spring. It is not in bloom until June, and in its wild state it is often possible to gather its flowers in July. The flowers are white and quite fragrant, something not to be said of all azaleas. As its home is in wet places it is useful for planting in low ground, where often it is difficult to find shrubs that will thrive; but it need not be confined to such situations, for it will grow where any other azalea will.

Rose *Gardenia*, one of the *Wichuriana* hybrids, though fairly well known in collections, deserves to be still more planted. Its color is a beautiful yellow in the bud, changing to cream white when expanded, and its odor is delicious. The flowers are double, in bunches of two to three, sometimes but one on a shoot, while the foliage is of a deep green, firm texture. It should be better known as a yellow rose than as a cream-colored sort, because its buds are its chief value and they are yellow.

One of the rarest shrubs in cultivation is the *Stuartia virginica*. It becomes a large shrub or small tree, flowering in early June. The flowers are white, with a cluster of purple stamens at base; and as the flowers are three inches or more in diameter they look not unlike those of some of the finer kinds of *althaeas*. This one, *S. virginica*, is quite different in foliage and flower from the *S. pentagyna*, a species often sold for it. *Pentagyna* does not have the purple center the *virginica* has.

Witnessing the ill-doing of so many shrubs and trees transplanted late in the season leads to the suggestion that great loss need not be, with care. Where late planting is not possible, it often is to dig and heel in the stock early in the season; and this is a distinct advantage to it. Pushing of the buds is delayed, and this, with heavy pruning, watering and secure planting, places the stock in as good shape as though set out in early Spring. Then if a damp season comes at the planting time it is an additional advantage.

Calycanthus Shrubs It is a pity that the good old sweet shrub, *Calycanthus floridus*, is so seldom seen in cultivation, having been supplanted by a comparatively worthless one, *C. laevigatus*, sometimes called *C. fertilis*. The *floridus* is well worthy of its name, sweet shrub, its flowers having a delightful "strawberry" odor, while the flowers of *laevigatus* are not at all as fragrant, and, in fact, many of them are without any odor at all. Attention has been called to this before, but it is opportune to mention it again now, as this is the season to look to the propagation of the true *floridus*. The trouble and disappointment that many experience with *calycanthus* comes from the error on the part of many nurserymen who sell the *laevigatus* for the *floridus*. Many of them do not know of the difference and take the word of seed collectors that what they offer is *floridus*, while the fact is that seeds of *floridus* cannot be had from any collection. It rarely seeds; on the other hand, *laevigatus* seeds freely, and it is this one collectors sell for *floridus*. Practically the only way to increase the true *floridus* is by layering and by sub-division of an old plant. It increases by

underground stolons, and can be grown from root cuttings. This is the time to try the layering of the plants. Strong shoots notched and layered root readily. They root without notching, but quicker when it is done. When it is desired to take up a large plant and divide it the number of separate plants that can be made can be added to it the branches are notched, or slit, at the base as for layering and then to heap a lot of good soil about the plant, as is done when layering quinces, leaving the heap undisturbed for a year or two.

Display of Roses Our photograph herewith represents a display of roses near Horticultural Hall, Fairmount Park, Philadelphia, and it is to show how well the plants do, standing unprotected all Winter. The varieties are nearly all of the hybrid perpetual type, and in the collection are some of the best sorts of all. The plants are well matured every Au-

Display of Roses at Fairmount Park, Philadelphia

turn before Winter sets in, and this acts as well as a mulch to the plants, keeping the frost from penetrating deeply, which in itself is an aid to all kind of plants. The pruning of the plants in these beds is well done. Hybrid perpetual roses will flower the whole length of the last season's shoots if let alone, but then the flowers are not over large. By pruning away nearly or quite one-half the growth there is an increase in the size of the flowers produced, and a uniformity of outline given the beds which is very desirable. The beds before us were pruned on this plan. One and all were cut back, that there would be as near a proper outline to the bed as possible. The strongest plants make more height than weaker ones, of course, but this little irregularity in the bed is rather in its favor than otherwise.

A great many roses less hardy than the hybrid perpetuals can be wintered in good order, if but the base be protected. Often but a few inches of live wood near the ground is sufficient, and this much can be secured by placing forest leaves, sawdust, sand, manure or even soil itself around the plant at its base. Where soil can be dug up close to the plants it is the most expeditious way of all; and then when Spring comes and the raking away of the soil is done it has not to be carried away as some other material would have to be. Many of the everblooming roses can be wintered safely in this way.

Flowering Dates of Catalpas Now that the question of forestry is interesting the whole country, and in this connection the catalpa is being so prominently mentioned as a most valuable timber tree, it is well to note the difference in the character of the flowering of the two native species, the *C. bignonioides* and *C. speciosa*, that the propagation of the latter only may be fostered as the other, *bignonioides*, is not its equal as a forest tree. The wood of the latter may be as durable as the former. The former, being a native tree and the *speciosa* plant from Western raised soil. At this time, June 20, the two are nearly recognized by their time of flowering. The *speciosa* flowered in the first week in June. It has now been out of flower for fully a week, and this day, a full week later, the first flowers only of the *bignonioides* are opening, and it will not be entirely out of flower, or no more than out, by the close of the month. Where the two sorts are so that comparison can be made the kind can easily be recognized in this way. Beside this, the *speciosa* makes a tall forest tree, while the *bignonioides* does not, growing into a spreading bushy tree. It is the better tree for a lawn, as its panicles of flowers are much better displayed than are those of the *speciosa*. Those who intend to set out forests should be sure to secure the true kind, as *bignonioides* would not give them but disappointment. Experts declare that there are intermediate kinds, hybrids between the *speciosa* and *bignonioides*, but in view of the fact that *speciosa* is out of flower before *bignonioides* open, it does not seem possible for much mixture between these two, and possibly the variation in some seeds may be due to locality in some cases instead of to hybridization. The character of the seeds of the true *speciosa* and of *bignonioides* is quite distinct, even though slight variations in each may be observed, and nurserymen should interest themselves to see that what seeds they sow are the right kind.

White-Flowered Judas Tree *Cercis canadensis alba*, which has been introduced by Mr. Teas, an accidental seedling, we understand, makes a nice addition to the list of these trees as well as to the number of white-blossomed, Spring-flowering ones. All the Judas trees are pretty, and this white-flowered one will contrast nicely with the others set in a group with them. There is no reason why plants of it should not soon be in the hands of all the trade, as Judas trees can be rooted from soft wood cuttings at this time of the year, as well as from seeds sown in Spring. It may be that being but a variety it may not come true from seed, in which case seedlings could not be sold until they flowered. Many varieties of plants do come fairly true from seed, as for instance, the purple herryberry, and it is probable this white-flowered Judas tree would. Nurserymen do not hesitate to sow the seed of the purple herryberry, because the few that do revert to the green form are easily detected the first year of their seedling life, and so can be separated from the purple ones. Layering of this white Judas tree would also be in order, and at this time; and it may be that it would be increased by budding it on the common one, *C. canadensis*. The best-selling Judas tree so far is the Japanese one, *C. japonica*. Its dwarf, bushy habit, as well as its large rose pink flowers are greatly in its favor.

JOSEPH MEEHAN.

California Plant Notes.

Romneya Coulteri, or, as it is known on this coast, its native place, *Matiliza Poppy*, is now in bloom, and a beautiful sight it is. There are two varieties of this plant with two distinct characteristics. The flowers of the one has a calyx covered with a yellowish colored tomentum; in the other it is smooth. The first named spreads by creeping root stalks and, if given some water during the Summer months, will soon cover a large area of ground, the other increases only at the crown of the plant. The flowers of both varieties are identical. Neither of them seed freely, but both may be rapidly propagated by root cuttings in the same way that blackberries are grown. The seed seems to be covered with an impervious coating, which keeps it from germinating for a long time, sometimes as long as two years, but, if soaked in lye water made from wood ashes, which dissolves the coat, it grows as quickly as other seeds. This is also true of our tree poppy seed, *Dendromecon rigidum*; this plant, however, has no adventitious eyes on the roots.

F. D. BARNHART.

Pomato or Tomato, Which?

Oscar Soderholm, foreman at the greenhouses of H. F. Littlefield, Worcester, Mass., has a genius for experimenting. In February, Mr. Soderholm grafted Lordland tomato plants on to potato vines. Now, he has a number of double plants; above ground we found tomato plants 6 feet high, still growing rapidly and full of green and ripe tomatoes. On the other end, in the ground, there are potatoes the size of an egg. There are no potato vines in sight, excepting those growing from the new potatoes; for, strange to say, the potatoes, instead of ripening, are sprouting. Mr. Soderholm has other experiments on the way.

JOTTINGS FOR FLORISTS

BY EDWIN LONSDALE

Rose William R. Smith A few weeks ago fifty plants of this new rose were sent here for trial by John A. Shellem as a rose highly recommended for outdoor work. They were thrifty young plants, growing in 2½-inch pots, and the way they have grown since speaks well for their vigorous constitution. We have potted them on until they are now in 5-inch pots, as we are not yet quite ready to plant them outdoors. The rose originated on Mr. Shellem's place five or six years ago and according to its reported pedigree it is the result of a cross between Maman Cochet and Madame Hoste. I like to know pedigrees of meritorious plants and to make them public, so that whoever may be interested may be guided in their future operations. It has been stated that for Winter blooming the coloring of the flowers of this rose is not sufficiently decided to be desirable, but I can say now that for Summer blooming under glass it promises to be all that could be desired in that direction. In form it is as nearly perfect as roses generally come; and as to its delicate coloring it is to me exquisite, being of a creamy blush with a somewhat darker shade on the edges of the petals, and to crown all which appeals to each and every one it is a good keeper. A rose that is a good keeper in Summer time can without a doubt depend upon everybody being its friend. It is a true Tea variety and the general good qualities of William R. Smith may be said to come first from Maman Cochet, a rose that is conceded to be the queen of all pink garden roses, and the other parent, Madame Hoste, in its day was most satisfactory as a Winter bloomer under glass as to freedom of bloom and form of bud, but its shortcoming was lack of decision in color character, causing it to be relegated to the rear, until nowadays it is rarely seen. I saw it not long ago, however, on a private place rendering an excellent account of itself, and I was in confidence advised by the gardener in charge that Madame Hoste would stand more feeding than any other rose that he has ever had anything to do with. The plants seen on the occasion referred to were in better shape as to thrift in growing and the buds were larger than I had ever before seen of said variety among commercial growers. If Madame Hoste were only more of a decided yellow in color it would, I feel sure, be more grown among the trade than it now is, as there is certainly a place for a good yellow rose where flowers are sold at retail. This information is introduced here to indicate that the rose William R. Smith is well bred.

Climbing Roses For some time I have had a desire to grow a number of Rambler roses for the purpose of having a good show of bloom in their regular season, and also for the purposes of education. Comparison under exactly similar conditions is what is needed. A day or two ago I put my threat into execution, and a dozen varieties, two of a kind, were planted all in a row. Owing to available space not being any too plentiful here they were planted only three feet apart. In due time galvanized iron pipes, three-quarter-inch measure will be placed alongside of each plant, eight feet high, for support. A "T" will be on top of each pipe and with pieces of pipe properly attached to the T's, a continuous line of pipe will be there on which to train the roses as they grow. As they are now planted, two Crimson Ramblers occupy the central position; the Philadelphia Rambler on each side in second position, Hiawatha third, Carmine Pillar fourth, Crimson Roamer fifth, Farquhar sixth, Dorothy Perkins seventh, Lady Gay eighth, Tausendschön ninth, Tenth and eleven spaces are vacant, awaiting future development. Keystone, a reputed overblooming yellow Rambler, is the twelfth, occupying the two extreme end spaces. I expect to have a great deal of pleasure in watching all these varieties, their time of blooming, and other peculiar characteristics that each variety naturally possesses.

A Clash! In a suburban garden is to be seen something that really makes one's blood run cold. There are Crimson Rambler roses in full bloom at each supporting post to the veranda, and scarlet geraniums in full bloom planted, forming a thin red line between same. Scarlet geraniums will look all right after the roses have done blooming, but the roses should be given the right-of-way until they are on the wane, and the flowers of the zonales be kept religiously picked off in the meantime, thus avoiding discordant color combinations.

Another Clash! A few days ago, when visiting the well-kept place of Mr. Samuel T. Bodine at Villa Nova, Francis Canning in charge, I saw a fine lot of exceedingly well-flowered Bougainvilleas in bloom and the word was passed, "Why are not such finely decorative plants doing duty at the mansion, either on the porch or within the house?" to which Mr. Canning replied, "One of the plants has been in use there for some time, but I was continually reminded by the madam that the coloring did not harmonize with the surroundings and I had no peace until it was removed."

Natural Gardening In conversation with a lady, who is reputed to be quite wealthy, the question of natural vs. formal gardening was under discussion. She said: "That part of Fairmount Park where the landscape gardening is so arranged as to give it as nearly as possible a natural effect has no charm whatever for me. I prefer beauty set as prim and as formal as it is possible to make it." It is grievous to listen to such talk, but the opportunity did not present itself to make it worth while to endeavor to lead her to think otherwise. Such people who are so set in their ideas have to be handled very diplomatically, so as not to offend them, when pointing out the possible error of their ways, and try to teach them that the more nearly natural a place is planted the more it is to be admired. It is to be understood, of course, that all formal gardening is not to be condemned by no means. There are places where both or either may be made use of to advantage. At Mr. Bodine's place, before referred to, there is a round sunken garden with brick work as a retaining wall, capped with stone. The prevailing coloring among the flowers was, on the day of my visit, the blue of the delphiniums and the yellow of the perennial coreopsis. The Oriental poppies were over, but the Japanese irises were in full force; the white-flowered varieties showed to the best advantage. Some of those with purple flowers clashed with the bluer delphiniums. Some fine large clumps of a perennial phlox acted very effectively as a pen-maker in many instances, which goes to prove that the white flag of truce in war times comes without a doubt by its coloring appropriately.

LATANIAS

Strong, 2 in., \$3.00 per 100; 3 in., \$6.00 per 100; 4 in., \$15.00 per 100. Ready to ship. Will make fine plants this Summer.
DRACAENA Indivisa, 2 in., \$3.00 per 100; 3 in., \$6.00 per 100.
PANDANUS Utilis, 2½ in., \$3.50 per 100.
KENTIAS, Belmoreana and Forsteriana, 4 in., 2½ and 3½; 5 in., 50c, and 75c; 6 in., \$1.00, \$1.25 and \$1.50. Large plants, \$2.00 to \$25.00 each.
PHOENIX \$2.50 to \$25.00 each.
ARAUCARIA Excelsa, 5 in., 50c, and 75c each.
ARAUCARIA Excelsa, 6 in., 75c, and \$1.00 each.

FERNS

Whitman, 1 in., \$20.00 per 100; 5 in., \$50.00 per 100; 6 in., \$75.00 per 100.
 Small Ferns for dishes, large flats, fine condition, \$2.00; 2 in., \$3.00 per 100; \$25.00 per 1000.

ORCHIDS

Largest Importers, Exporters, Growers and Hybridists in the world.

Sander, St. Albans, England and

235 Broadway, Room 1, New York City

(107) **Mildew on Roses.**—Please let me know the best remedy for mildew on roses. I have a house in which I grow Etoile de France, La France and Kaiserin for Summer flowering. We freeze them in Winter and let them start natural, as there is no heat in the house. I have had air on both day and night and up to the present have done well.
Mass. SUBSCRIBER.

—There is no better remedy than dusting the foliage with flour of sulphur; use a bellows as a distributor and repeat the operation as often as necessary until the mildew is entirely eradicated.

(108) **An Interesting Question.**—About what interest should I reckon on, on the original investment when renting greenhouses with modern appliances and convenient to station apart from the value of the land?
New York. Z.

—In estimating the rental for greenhouse property, aside from the value of the land and the location, it would seem that six per cent. on the original cost and ten per cent. for deterioration would be as low a figure as could possibly be made.

(109) **Ficus Repens.**—How shall I propagate *Ficus repens*, and what parts of the plant shall I use?
California. A. L. H.

—To propagate *Ficus repens* use the tips of the shoots for cuttings. They will root easily in sand over bottom heat.

(110) **Cyclamen not Growing.**—My cyclamen are not growing. They were sown in September, 1907, and transplanted in December, and are now in 3-inch pots, in small greenhouse 18x12, well shaded from 10 to 4; gave them soft water, and spray over head daily and water only when need it with can. Would nitrate of soda do them good? If so, state formula. They have no aphid or other insect pests, but leaves curl up and come yellow.
California. A. L. H.

—The cyclamens are evidently being grown too warm. Place them in a frame that faces the north, use ashes for the pots to stand upon, discontinue all syringing and water very carefully. Nitrate of soda would do them more harm than good.

(111) **Treatment of Poinsettias.**—How shall I treat poinsettias? Canes were cut into lengths of four eyes, one eye placed in sand. They made leaves but don't root. Shall I detach leaves and propagate from them, or plant piece of cane in bed and take cuttings in August for pans? Which cutting would be best in August—a top or side shoot?
California. A. L. H.

—Plant the old poinsettia plants outdoors where they will soon start to grow; then take the new growth, make them into cuttings, and root them in the ordinary propagating house. Either the top or side shoots are suitable for use as cuttings.

(112) **Oleander Cuttings.**—Would oleander cuttings root now? Our average daily temperature is 85 to 90.
California. A. L. H.

The half ripened wood of oleander will root easily at this time, but they must be kept shaded from the full sun and given a continual moist atmosphere.

(113) **Raising Snapdragon.**—Please advise me as to raising snapdragon under glass for cut flowers. At what time should the seed be planted, and when should the young plants be placed in the greenhouse beds? If side branches form, should they be picked off. Also state day and night temperature.
New York. A. J. D.

Sow the seed of snapdragon as early as possible. As soon as the seedlings are large enough, transplant outdoors in well prepared soil. Encourage growth as much as possible by careful cultivation all through the Summer, in order that good, strong plants may result. Lift the plants from the ground in September and plant them on the greenhouse bench, us-

ing a soil similar to what is used for roses, taking care that the plants receive no check from their removal from outdoors to the bench. As regards pinching the shoots back, all that is necessary is to pinch one or two of the leads back in the Summer to ensure having a stocky plant when transferred to the greenhouse; after that let everything go, as every shoot will produce flowers. A night temperature ranging anywhere from 54 to 58 is desirable for them during Winter; the day temperature 10 or 12 degrees higher. The best place for them in the greenhouse is on the center benches.

(114) **Eel Worms in Pots.**—Tell me the best way to get rid of the eel worms in flower pots.
New York. H. M.

—For worms of any kind in flower pots, the best remedy is lime water. Put a quantity of lime in a pail or barrel. There is no danger of making the lime water too strong, as the water will only absorb a certain amount of the lime, however much of the latter may have been put in. After the water and lime have been thoroughly stirred, allow the lime to settle; then pour off and water the plants, repeating the operation in two or three days if necessary.

(115) **Trees and Shrubs for the Sea Coast.**
New York. SUBSCRIBER.

—The near presence of salt water is no hindrance to the well-doing of trees and shrubs, as witness the many places where they grow right down to the water's edge. Salt spray does not suit all kinds, though there are some of them that do not mind a shower bath of this at times. Below is a list of sorts that are looked on as good seaside subjects, but I would say plant anything at all after setting along the boundary line some thick growing shrubs or trees to break the force of the wind, it being the wind more than the spray that does harm.

Trees: Austrian pitch and inops pine, white cedar, red cedar, common juniper, larch, holly, sour gum, post oak, black jack oak, sweet gum, swamp magnolia, swamp alder, swamp maple, Osage orange, ailanthus and willows. Trees with limbs that give to the breeze are better than those with sturdy branches, the giving saving their leaves from being torn.

In the line of shrubs try these: Myrica cerifera, Prinos glaber, Rosa carolina, cephalanthus, California privet, Rosa rugosa, tamarisk, colutea, halimodendron, laburnum, elder, Lycium barbarum, baccharis, lilacs, Euconymus japonicus and E. Sieboldianus.
J. M.

(116) **Biennial Echium.**—Enclosed find photo of a plant grown extensively here in Redlands. I would like to know its correct name. It answers the plants described by Bailey as *eremurus*; also *echium*.
Redlands, Cal. SUBSCRIBER.

—The plant shown in the photograph is one of the biennial *echium*, which is one of the curiosities of plant life of this part of the State. I have seen flowering stems six feet long and twelve inches diameter, with its curious flowers, pale blue in color streaked with white. The undeveloped flower is red or pink, which gives the inflorescences a unique appearance, because there are buds and full-blown flowers on the same panicle, which is short petioled.
P. D. BARNHART.

(117) **Greenhouse Heating.**—My greenhouses are heated by four-inch cast iron pipes (supply tank is over boilers), four flows and five returns in each house; two of the flow pipes have no valves and would like to put in valves—if they would not interfere with the apparatus when all the valves are shut off. All houses are piped alike.
Connecticut. M.

—Your last sentence is the keynote to your letter. If you must have valves on all the flows of the various circulations see that they are never all shut off at the same time. If you do, circulation will stop, the apparatus be forced to boil over, and the probability is that a new boiler will be required, or even worse would happen. I cannot say much more in the way of information, for you lay particular stress on the question "all the valves are shut off."
I. G. SCOLAY.

The book of WATER GARDENING

2 to 8 Duane Street, New York.

Room Wanted

ROOM WE MUST HAVE to place our importations of ARAUCARIAS, PALMS, BAY TREES, etc. Therefore, our entire stock of bedding plants must go at astonishingly low prices.

Look! Look! Look!

And just think!

SCARLET SAGE, the best variety in the world—the Clara Bedman or Bonfire, 4 in. pots, which used to sell at \$12.00 per 100, now \$3.00 per 100, or \$15.00 per 1000. No less than one hundred of these at this price.

BEGONIA VERNON, dwarf red and Erfordii, 4 in. pots; 3 in. dark dwarf Vernon, 4c.

COBAEA SCANDENS, we have about 1000 nicely staked up, 4 in. pots, about 2 feet high, to close out, 5c. each.

CANNAS, best bedding varieties, red, yellow and pink by name, large, 4 in. pots, \$6.00 per 100.

FUCHSIAS, 4 in. big stock, 6c.

ASTERS, Victoria, 2 1/2 in. pots, \$2.00 per 100.

SOLANUM, the newest improved variety (Multiflorum) produces large berries and plenty of them, 2 1/2 in. pots, \$1.00 per 100.

COSMOS, 3 plants in a 3 in. pot, \$4.00 per 100.

Pure white MOON VINES, for which we have a world-wide reputation, 4 in. 12c.; 2 1/2 in., 5c.

Plants, 2 1/2 to 3 in. pots, at only 2c.

Heliotropes, Phlox Drummondii, Lobelia, blue, Dwarf and Trailing; Tradescantia, Verbenas, Petunias, Giant and Inimitable; Sweet Alyssum, Little Gem; Summer Chrysanthemums, Nasturtiums, Pyrethrum, white flowering; Kenilworth Ivy, Tagetes or Marigold, Eldorado and Gold

Ring; Ageratum, 3 in.; Fuchsias, Torenia Four-nieri, Dianthus, Chinese and Japanese Pinks.

BOSTON, SCOTTII and WHITMANI FERNS, 4 in., 20c. to 25c. each. WHITMANI FERNS, 1 in., 25c.

CLEMATIS JACKMANNI, the true variety, from Europe, 6 in. pots, 3 feet high, 35c. to 60c. each.

ARAUCARIA ROBUSTA COMPACTA, new importations, 6 in. pots, 3 tiers, \$1.25 to \$1.50. Araucaria Excelsa Glauca, new importations, 6 in., 3 tiers, \$1.00 to \$1.25.

ARAUCARIA EXCELSA GLAUCA, for the lawn or porch, last Spring (1907) importation. Only specimen plants can be offered of the beautiful type, 6-7 in. pots, 25-30-35-40 in. high, same in width, 6 year old, 5 tiers, \$1.75, \$2.00, \$2.50 to \$3.00 each.

Have just received from Antwerp about 5000 Araucaria Excelsa of all sizes. Plants, 3 tiers, 8-10-12 in., 40c.; 12 to 14 in., 50c.; above, 60c. to 75c.

KENTIA BELMOREANA, 4 in., 20 in. high, 35c.; 5 in., 20 to 25 in. high, 50c.; 5 1/2 in. pots, 60c. to 75c.

KENTIA FORSTERIANA, 7 in. pots, 40 to 50 inches high, \$2.50 to \$3.00 each. 6 in. pots, 30 inches high, \$1.50; 6 in. pots, 25 inches high, \$1.00; 6 in. pot, 20 inches high, 75c.; 5 in. to 5 1/2 in. pots, 50c. each.
DRACENA BRUANTI, 6 in., 35c.

Rome, N. Y.

Memorial Day trade was extra good, and the bedding business was the best experienced for several years.

The good growing weather has caused everything outside to look very fine. E. J. Ryan has a fine house of Lawsons planted, and has commenced planting chrysanthemums this week.

Firms Incorporated.

DES MOINES, IA.—The Loziers have incorporated with \$25,000 capital stock and will engage in the florist and nursery business.

BRIGHAM CITY, U.—The Intermountain Nursery Company of Brigham City, U., have filed articles of incorporation with the Secretary of State.

Firms Who are Building.

Items for insertion under this heading are respectfully solicited from our subscribers. They are published free of charge.

CHAMPAIGN, ILL.—Work has commenced on the new greenhouse of Thomas Franks & Son.

ROCK ISLAND, ILL.—The Rock Island (Ill.) Floral Company are at the present time building greenhouses near the entrance to Chippianock Cemetery.

WINONA, MINN.—The Kirchner greenhouses at the West End are undergoing considerable improvement and enlargement.

JAMESTOWN, N. D.—Allen K. Wheeler, an experienced florist of Litchfield, Minn., expects to arrive in Jamestown in a few days to build a large greenhouse.

CHANGES IN BUSINESS.

The Florists' Exchange will be pleased to publish under this heading all changes occurring in the addresses of firms connected with the trade.

ROCK ISLAND, ILL.—The greenhouses and fixtures owned by the Long View Park florists have been leased by Henry H. Hensley as manager.

ROCHESTER, N. Y.—Florists consider the display of roses this season at the Mt. Hope avenue home of the Ellwanger & Barry Company among the finest in the country.

EAST LIVERPOOL, O.—Among the many and various features being arranged for the country fair to be held at Rock Springs park near the close of the regular season next September is an immense flower show.

CORNING, N. Y.—W. J. Cheney has sold to Dr. F. H. Starr, of West Putney street, the two front greenhouses at 256 West Putney street.

CEADARVILLE, N. J.—Stephens Brothers, Inc., Cedarville; capital, \$100,000, incorporate—William K. Stevens, C. S. Stevens and G. W. Stevens.

BRIGHAM CITY, U.—The Intermountain Nursery Company of Brigham City, U., have filed articles of incorporation with the Secretary of State.

LYNN, MASS.—The Houghton Horticultural Society and Lynn Horticultural Society spent Bunker Hill day in an excursion to Canobie Park, Salem, N. H.

DIXON, ILL.—The annual picnic of the Rock River Horticultural Society was held at Lowell Park. A dinner in the park was followed by the usual session of games.

GRANGE-BALTIMORE, MD.—Mr. Max Hildesheim of the Shedd Road Greenhouses, Grange-Baltimore, Md., will sail for Europe on July 8.

Catalogues Received.

YUERS GARDENS COMPANY, Newburgh, N. Y.—Wholesale Price List of Flower Seeds and Bulbs.

Business Difficulties.

"At Eighty."*Paper read by C. L. Allen of Floral Park, N. Y., on reaching his 80th birthday.*

Life is not living unless it is doing. There are no negatives in the order of our being. The command is to do *not others*, but for others, as long as health and strength permit.

The general impression is that when a man has reached the "three score and ten" milestone, nothing further is required. He can sit in the sunshine and smile, or in the gloom of uncertainty and await results. This is a mistake—a sad mistake. Because the body grows old, that does not relieve the mind of its responsibilities. The mind is the man, the body is simply the means to an end.

But the body need not grow old as rapidly as it does, if it has mind to feed upon. Why should a man grow old when surrounded by all of God's creatures? He has the company of his fellow man or woman—the crowning effort of creative wisdom; he is surrounded by innocent childhood, the most beautiful gift of God's goodness. He has the songs of the birds to cheer, the flowers with their rare beauty and delightful fragrance to please. If it is his choice, he has friendship true and affection pure.

The burdens of life ended, man has nothing to do but live; not simply to exist but to live up to his opportunities, truly, manly, if he is brave enough to banish the nightmare of death from his vision and lay down his trust with a smile, and with sincere gratitude for the pleasure of having lived. The most consummate coward is the man that is afraid to die.

But why give up at seventy? Getting old is a bad habit. Nature has no use for the man that quits, and lets him retire. The man that keeps at it is the one that stays long and is happy. He sings when at his work and has a smile for all occasions.

Let us see what has been done by some of the old fellows that never give up.

Oliver Wendell Holmes at 83, wrote, and read at the Emerson College of Oratory, "Has there any 'old fellow' got mixed up with the boys?"

Among the Greek scholars old age was considered a requisite for mental vigor. Solon, Pindar, Sophocles, Anacreon and Xenophon lived to be over 80, doing some of their best work near the close of their lives.

When Goethe died at 83 the doctors laid his naked body on the table, and Schöffer exclaimed: "It is the body of a Greek god," and burst into tears. There was no wastage, shrinkage nor signs of age in that heroic form.

Michael Angelo was writing love sonnets at 80. From the time he was 71 years old until he was 79 he was employed in painting the Pauline Chapel. He was 73 years old when he was appointed architect of the wonderful St. Peter's at Rome, upon which he expended the vast powers of his mind in the 17 years following. During the last years of his life Michael Angelo executed, almost at the same time, the three masterpieces which have immortalized him in the three arts. He carved the "Moses," he painted the "Last Judgment," and he raised the dome of St. Peter's—a striking proof that in the arts, as in literature, the best works of man are usually performed in advanced life, when he is enabled to unite the experience and firmness of many years to the fire of an imagination ever young.

Hahnemann, the father of homeopathy, one of the world's greatest men, the most profound scientist, proved the value of his attenuations by getting married at 81, and by being blessed with twins in a year.

Dr. Du Boissey of Hanover, in 1903, when 103 years old, bought an automobile to use in making his daily professional calls.

At Mont Parnassus, France, lives Dr. David, nephew of the great painter, David. When he reached his 101st year, still in active practice, he put a card in a local paper declining to further attend night calls.

The celebrated traveler and scientist Von Humboldt lived 90 years and continued to pursue his scientific researches and to publish the result of his investigations up to the year of his departure from this world.

The whole secret of life is to live, and to live is to carry on the work for which we were created. The active principle of life is performance; to do something in the order of creation, is our part in the great plan, to cease doing is to cease living. A mill will not long run with an empty hopper.

Whether the human race had a fixed period of existence in the beginning, we cannot say, we do not know. It is immaterial. We only know with the advance of civilization the laws that govern life and health have become fearfully abused, with results following. There is no way to develop muscle but by using it; the moment it is allowed to rest idly it wastes. The same is true with the mind. Nature is a rigid economist and does not furnish material to be wasted. But is there no limit to man's age? may be asked. Most truly so. We cannot give it, we do not know. But we do know of many instances, some of which we have noted, where men have been actively, usefully employed after the 100

year record. We knew too of many instances where strong, active young men have not reached their 40th year, because they were disobedient to nature's demands. It is a common error—a sad mistake men make when they live two or more years in one. Tension has its limit. When overdrawn the machinery of life soon becomes a disjointed wreck. The tension of mind or muscle should never be overtaxed, neither should they slacken. In either case the result is fatal. If the mind weakens a breakdown of man's natural powers will be the result. The other result is a breakdown through inertia, a polite term for laziness, a condition from which man rarely recovers, and one which never accompanies a green old age. If a man wishes to go through life with a firm, a manly step, he must never allow his energies to stagnate, which means to keep up and is the preventive of growing old.

Every man should have a hobby and ride it well; some line of thought that will keep the mind young; some interesting pastime that will make the day seem short instead of long. Avoid financial hobbies as you would a crime. Do not waste your time in trying to regulate God's ordinances; simply accept and respect them. Do not fret because of sunshine or storm, but rejoice and be happy in anticipation of the results that are sure to follow. If your desire is to grow old beautifully and transmit your virtues to those that are to follow you, you must at all times look upon the beautiful and good and turn a deaf ear to the evil and the false. What we are will be seen in our posterity in the generations that are to follow. The fruits we bear will be reproduced in them. The law of inheritance is binding, which means that like produces like.

Miss Mulor in an essay on growing old struck the keynote of the philosophy of the soul, as follows, "To grow old gracefully is a good, a beautiful thing; but to grow old worthily is a better; and the first effort to that end is to become reconciled to youth's departure; to have faith in the wisdom of that which we call change, but which in truth is progression; to follow openly and fearlessly, in ourselves and in our daily life the same law which makes Spring pass into Summer, Summer into Autumn and Autumn into Winter, preserving an especial beauty and fitness in each of the four."

To have something to do at all times, something to keep the mind constantly at work, ever bright and shining, is, and should be, the name of man's hope, the limit of his ambition. An active intellect, a mind that is ever at work will keep the body from rusting for a much longer period than is supposed possible.

Mother Nature is very fond of her active "old boys" and girls. She wreaths their brows with smiles, and sweet content is visible in their every feature. She, too, is very fond of us young people, more so than we are of ourselves. We poison the system with tobacco, and marvel at the loss of our physical powers, weakness of the stomach, heart and lungs, then cannot reconcile the results following.

Rosy cheeks and a clear skin at 80 come from health-giving food and drink, and absence from all unnatural stimulants. Exercise is a much better tonic than wine, and pure air is an elixir that gives to the brow the bloom of health that nicotine destroys.

Almost every man desires to die rich, which is highly commendable, as it is evidence of industry well applied, both of mind and body. Many, very many, fall out in the chase for the golden bauble of wealth before they reach the meridian of life. They live fast and die young. To live two days in one is to drop out at the noonday of life; they heed the warning when too late, and then realize how much better it would have been to have lived rich through moderation with true happiness for company, than to die rich in company with greed and gout.

One of the most pleasing reflections, and we may say one of the greatest blessings that cluster, like gems, around the human heart in life's twilight, is the desire for knowledge, which grows more active as our days grow less. We find there is so much to learn that the little we have acquired seems as nothing. It matters not how much we have learned, the desire is, "For light, more light still." There is always something new to learn, something to admire. The most familiar objects are at all times presenting new phases. The minerals and fossils speak to us beseechingly to admire their wondrous works. Those unknown tongues have a wonderful power of expression.

In every plant or tree there is always something new to admire—to love; and it is love that ennobles and beautifies the soul. What a blessing is the appreciation of gifts so freely bestowed, and to have them grow in splendor and profusion in life's glorious sunset.

My friends, it is not at all likely we shall ever meet together again, as friends and neighbors are wont to do. It matters not. The future is an unknown quantity. It is the eternal *now* that claims our attention, and permit me to say, as you are here to pay your respects to one who has lived beyond the usual period, that it is

not years alone that make one old, but conditions. Old is a relative term. It is not how many years we have lived, but how we have used them, that indicates age. A man may be old in good sound sense at thirty. He may be old and decrepit at sixty without an asset of wisdom to his credit. He is simply an old boy. To appear old at sixty, as a rule, indicates fast living; that we have trodden our steed beyond the measure of its strength. We have carried extra steam and strained the boiler. To get up an extra amount of mental or physical force we have used the spirit of the grain instead of the substance.

The ideal life is the one that has grown old beautifully—which means usefully—in doing that we will not grow old at all. The calendar may rate us old, but the vigor of manhood will deny the accusation, and show we are only ripening for the harvest.

In reality we will be young just as long as we live truly. The body may be rheumatic, it may need a staff for support; but the body is not the man, it is only a casket. The life is the man. Its active principles are love for all, justice to all, untiring industry along the lines of usefulness, and to the extent of our opportunities, to make our fellow beings happy.

To get the most out of this life we must live with others; that is, we must assimilate the food for thought given us by lives that have enriched the world. The poorest souls on earth are those that live in a golden casket of their own imagination.

A celebrated writer, I think Steele, said: "A healthy old fellow that is not a fool is the happiest creature living." Quite right. He should be having the experiences of life which have enabled him to become as cheerful as a May morning; with a memory free from regrets, a mind constantly growing richer, and free from the alloy of selfishness, he can enjoy his faculties in the highest degree of satisfaction. Having lived a life of usefulness his pleasures ripen with his years, and his life is now enriching the world. He can look upon the sunset of life and smile, as the sunset to him is but the sunrise to those that are to follow in the line of posterity.

If a man does not succeed in this life he should apologize to himself. He is captain of his own craft—the tiller is in his own hands. He can go with the tide and get wrecked, or he can beat up stream against wind and tide and make a successful voyage. His crest and shield should be the admonition of Elias Hicks, "None but live fish can swim up stream."

They tell us of a Heaven beyond—a life beautiful beyond compare, a most glorious hope—a fond anticipation—an abiding faith—a cheerful confidence and trust—a dwelling with the angels. I do not—cannot question any one's faith and trust. It is all right. But never mind the glory of the angels there, but live so here that the angels will delight in meeting you in whatever sphere you may reach. Our craft is here; we are living in the *Eternal Now*, where the best life is the most noble faith.

Should that life be renewed in some foreign clime, some distant shore—and I do not question the hope—we shall reach that haven precisely as we leave this. Our cargo of life's assets will remain unbroken. The virtues that adorn our characters here will be resplendent there. Upon life's scroll the good we have done will be recorded, and the evil will not be forgotten.

The question of faith and hope is one that every heart must settle for itself. Whatever may be our opinion, we should ever wear the smile of content. The approach of death should suggest flowers rather than the tomb; hope rather than fear, like poor Keats, who said upon his dying couch: "He already felt the daisies growing over him."

To look upon life's setting sun with a smile, to greet the messenger with the lily and the rose, is to depart as though life had been a glorious success, and not a pilgrimage through a vale of tears. Let your friends do the weeping; not for you, but because *they* have not lived on a plane sufficiently high, to overlook the dreaded valley, and behold the glorious sunlight beyond.

My friends, the thoughts presented you thus far were committed to paper some months ago, in anticipation of this occasion, and laid aside for careful consideration, and for any additional thoughts that might suggest themselves, pertinent to the time and place. Since then my mind has been occupied much of the time with more thought than could well be furnished with expression. Ofttimes our thoughts are not provided with pinions to carry them onward and upward to hearts ready to receive them. Many times we have found it difficult to retain them until a fitting opportunity presents itself to preserve them.

A somewhat serious illness for some days and weeks seemed to indicate doubts as to the present gathering of family and friends. While these indications were plainly manifest in the countenances of those near and dear, they did not in the least disturb me. The requirements of what I consider a true life—a living faith—prepare the mind to lay it down without fear or dread. During those hours, days and weeks, perfect content and calm resignation made the period of uncertainty regarding my recovery as cheerful and pleasant as the flowers in Springtime when nature is radiant with smiles and cheer.

Perfect confidence and trust in the Creator, with intense admiration of His every gift, was sufficient assurance that death is as essential as life, and as beautiful—perhaps more so—and that all would be well, no matter what the result might be. *That confidence, that faith, never for a moment weakened.* There was no dread, no fear or doubt, and never a moment when the "pale horse and its driver" would not have been welcome.

Permit me now, my friends, during these moments of repose and calm reflection to express a few of the thoughts that presented themselves during these hours of uncertainty.

Another year is drawing to a close, its months, its weeks, its days are already buried, only a few hours remain; these are rapidly passing. Not another day hath this year of my life. Tomorrow morning's sun will shine upon the face of a new year; my 80th will be completed.

Let us turn our eyes to the future, and bid farewell to the past and the passing. Farewell to its cares, to its burdens, to its troubles, its sorrows and its griefs. Farewell to its yearnings and aspirations, its struggles and its trials. They have gone and taken their shadows with them.

Good-bye old year; good-bye. You have left some unpleasant remembrances, but they will not be charged up against you. You gave us more sunshine than storm; more of the beautiful and good than of sorrow and regret. Whether the days that are to come will be many or few it matters not; whether they will come freighted with joy or sorrow, we cannot say—we do not know. That matter is largely in our own hands; our lives are what we make them.

We can go into Wall Street where the power for evil has no equal, and where its influence is as fatal as the fabled upas tree, which was death to all that came within its shade; we can attend the races as patrons of the bookmaker, and we can become infatuated with the gambling dens and the bar-rooms and soon become disjointed wrecks upon the sea of life; or we can make our homes in the palace of industry, in the library or school of useful knowledge and become pillars in the superstructure of our country's grandeur and usefulness, and when the curtain of life falls the mind will either be dwelling with the demonic or angelic influences, according to the manner of our lives. The goddess Luck, whether of good or evil will be the one we have nurtured in our hearts.

The story of angels and devils is not mythical, but vivid illustrations of the good or evil manifest in the hearts of men.

The choice is ours. We cannot shrink the responsibilities the mistakes in life entail, and the good we do will follow us. The law of inheritance is imperative.

And now, with thanks beyond my power of expression for kindness shown and hope expressed; for the prayers offered and tears shed, for the good wishes that ever find a warm and cozy corner in my heart, I am most truly thankful. Again we say with joy and gladness: Farewell, old year—*Farewell!* That it may cast its mantle upon the new is my desire—my hope.

June 12, 1908. C. L. ALLEN.

Opening of the Clubhouse of the Florists' Gun and Fishing Club at Waretown, N. J.

Among Those Present

The season of 1908, of the Club heading these notes, was opened on Friday, June 19, Commodore John Westcott in full charge, with the names of the following, who assisted, appearing in the Log Book:

Robert Craig, George Redford, William B. Westcott, G. Cooper Watson, *William K. Harris, *Robert Kift, Alexander Craig Patterson, **Edwin Lonsdale, George Anderson, George Craig, **John Burton, David Rust, *S. S. Pennock, Charles H. Eimerman, John W. Dunham and Daniel C. Donaghue, all of Philadelphia; P. Joseph Lynch, West Grove, Pa.; Richard Lynex, Atlantic City, N. J.; **John N. May, Summit, N. J.; **W. J. Stewart and Colonel W. W. Castle, Boston, Mass., all of whom are members, with the exception of the last named, of the Florists' Club of Philadelphia, and six of those named and marked thus (*) have held office as president of said club, while those marked () are ex-presidents of the National Society of American Florists.

Richard Lynex was long identified with the retail florists in Philadelphia and some other cities. He was the only "wire-worker," for a number of years, in the Quaker City, and it was his delight to remind them "that he made the designs; all that the florists had to do was to just scatter a few flowers through them." He has long since retired from active business, and he is now spending the remaining years of an industrious life at Atlantic City. He has long since passed the Biblical allotted three score and ten years of life and is rapidly approaching his 86th or 87th birthday and he has, most assuredly, mastered the problem of growing old gracefully.

William K. Harris, I believe, the next in line as to length of time he has occupied a prominent place on the "mainland" sphere. His seventieth birthday was passed and appropriately celebrated last Winter, and his intellect is as keen and as bright as it ever was. Brighter in fact, because he can now see things as they are better and clearer than ever. Did it ever occur to my readers, that it is only vouchsafed to a very few people to be able to see things as they *actually* are?

I had the great pleasure of a quiet chat with Mr. Harris while ashore. We preferred to talk in the open, while the other part of the party took a sail, filling their lungs with ozone, meanwhile Commodore Westcott and ex-Presidents of the S. A. F., John N. May and John Burton, were exercising their most seductive wiles trying to secure the "bait" which never came.

To return to Wm. K. Harris, who takes much satisfaction in thinking over what ought to be, he made up his mind that either the government of the United States, or the State authorities, should take hold of forestry in its broadest sense; all waste lands along the New Jersey coast and of course, elsewhere wherever available, and plant to trees, trees that have proven to be the most suitable

for the given location, and—here is where William K. shows wisdom instead of training soldiers, train foresters, thus teach them how to produce and not how to destroy. The reason Mr. Harris advocates that the State or the Nation buy up land for forestry purposes is because life is too short for individuals to realize adequately on so great an undertaking. Another thought Mr. Harris gave vent to, was, that if he were thirty years younger, he would, with his present knowledge, not hesitate to go into the growing of azaleas right here in the soil as found, less than half a mile from the shores of Barnegat Bay where exists peat in abundance, of apparently the most approved texture. Land being comparatively cheap, he would plant sufficiently wide apart to allow of loose cultivation, and, by improved methods of watering, either irrigation or the best forms of the newer sprinkling devices, and he thus could successfully compete with the cheaper labor as prevailing in Europe.

Greenhouses would have to be erected in which to propagate stock, and in which the plants would have to be cared for during the Winter season, and all the heat that would have to be provided for in the latter structures need only be enough to keep out frost, say 35 degrees during the very coldest weather. These last named provisions apply only to those varieties of azaleas known as the Indian or Chinese.

Mr. Harris also stated that a young man could not go wrong if he made a specialty of the com-

mon variety of American azaleas, the characteristic of America in its growth, the greatest difference being in the colors of the leaves, which are crimson when those of the better known America are inclined to be of a somewhat tint. Mr. Harris has also found some differences in favor of America in point of hardiness. This variety would come through some Winter without loss, then again in other Winter a part of a plant would sometimes succumb. He believes that in the milder climate, a found near the shore, and when grown in position, sheltered from cutting winds, this variety would be found to be quite hardy. It is not as a plant for the open air, however, that Mr. Harris is considering this valuable azalea, but to be used exclusively for forcing purposes. It blooms so freely, and its coloring is so bright and cheerful, that it will be a favorite, for the purpose indicated, for many years to come.

Mr. Harris is decidedly optimistic in his views on the future of both culture. All that a young man need to be successful in the same as a profession, is, to possess strict integrity, correct business instincts, a business training, and to know just when

A Beginner's Qualifications

Groups of Specimen Plants of Roses in Flower at the Temple Show of the Royal Horticultural Society, London, June, 1908.

The plants were grown and exhibited by Messrs. Hugh Low & Co., Bush Hill Park, Middlesex, Eng.

to drop a thing before it becomes unprofitable to grow.

John N. May had something to say about milder on roses in general, and on Killarney in particular, and George C. Watson says there is a white variety of the crimson clover. The chief of the Dinger & Conrad Company, Captain Lynch, says his firm has a new rose with the same parentage as that given for Wyndmoor, namely, American Beauty-Saturne, and which is thought so much of that it has been named President Roosevelt, also, that they have a new variety, as yet unnamed, having as its parents, Maman Cochet and Heloise, the flowers of which are unusually large, superior in form and of which he is hopeful of creating a great sensation when the same is introduced to the public.

S. S. Pennock, David Rust and George Anderson returned home on the afternoon of Friday, after taking part in the opening ceremonies. Upon the arrival of the New York train, later in the day, with Messrs. W. J. Stewart, John N. May, and Colonel Castle, the sad news of the sudden death of Einar Alexander Wallace of The Florists' Exchange, was made known, and it cast a gloom over all those who were present. Mr. Wallace was held in high esteem by all those who had the privilege of his acquaintance. Everyone had a kind word to say of him and his work and a felt keenly the loss horticulture has sustained by his untimely end. May his soul rest in peace!

Roses and Crimson Clover

Alexander Wallace.

To all who, either in person, by letter, or in silent thought, have made their tribute to the memory of our late editor and associate, Alexander Wallace, we extend our thanks and our appreciation.

Human life is the most complex of all propositions. That one of its ordinations which decrees mortals must pass through fires (deep trials) before they can prove their standing on the plane of humanity, to the superficial mind may seem a qualification and a probing uncalled for; to those who have had the experience it is an absolute truth; for the height of human sympathy is to be appreciated only through the shafts of affliction.

The comforting words, the evidences of brotherly affection which have this week reached us from all sources, and the unseen, yet visibly-felt sympathy of others, will all help soothe the path through life which the widow must henceforward tread alone; to his most intimate friends and to those who were so closely related through daily association and business ties, the feeling of personal bereavement loses some of its bitterness in the knowledge that others, too, are grieving with them.

All honor to the memory of Alexander Wallace. The world is made better through the lives of men of his stamp. We drop the tear of sorrow on his grave, but engraved deep in our hearts, and so long as life shall last, will we endeavor to carry his image, the record of his deeds and, most lasting, the remembrance of his sympathetic nature, for it was this claim to a brotherly love which constituted the strongest tie that bound him to his friends.

AMERICAN SEED TRADE ASSOCIATION

REPORT OF THE TWENTY-SIXTH ANNUAL CONVENTION AT DETROIT, MICH., JUNE 23, 24, 25, 1908

Officers Elected For 1908-1909.

President—Watson S. Woodruff, Orange, Conn.
First Vice-President—J. C. Robinson, Waterloo, Neb.
Second Vice-President—Marshall H. Duryea, N. Y.
Secretary-Treasurer—C. E. Kendel, Cleveland, O.
Asst. Secretary—Leonard H. Vaughan, Chicago, Ill.
Executive Committee—Geo. S. Green, Chas. Dickinson, Howard Earl, Chas. N. Page, S. F. Willard.
Membership Committee—Albert McCullough, Leonard H. Vaughan, F. W. Bolziano.

Opening Session Tuesday, June 23.

The sessions were held at the Hotel Pontchartrain, Detroit, Mich., commencing June 23, 1908, and the seed trade was well represented. The convention was called to order by President George S. Green of Chicago.

In the absence of the mayor, there being nine conventions running in Detroit this week, his place was taken by City Controller F. E. Doremus, who made a happy speech of welcome, and was responded to by ex-President S. F. Willard, of Wethersfield, Conn.

The President's Address.

President Green, in the delivery of his address, congratulated the seedsmen on their sound condition generally, in spite of unfavorable influences resulting from the tight money market during the past six months, and hoped that the efforts being made to improve the currency system would result favorably, so that the business men shall not have to suffer for the blunders of others. The total volume of business in the seed trade during the past year has been large, and the demand for high-grade goods encouraging. He called attention to the necessity for being prepared to intelligently advise Congress, in the event that renewed tariff agitation shall come up, and endorsed the recommendation of his predecessor in office, Henry W. Wood, of Richmond, Va., as to the desirability of specific rather than ad valorem duties.

In line with the liberal policy now in vogue for the impounding of flood waters and irrigation of desert lands, and swamp lands reclamation, he recommended the continuance of the past policy of sending a delegate to the National Irrigation Congress.

President Green referred, in feeling terms, to the decrease within the past year of Messrs. Everett B. Clark, of Milford, Conn., a charter member of the Association and one of its ex-presidents; of Alfred Plant, president of the Plant Seed Company, one of the pioneer seed merchants of the West, and of D. M. Ferry, of Detroit, Mich., whose firm, while not a member for many years, occupied a prominent position in the trade. At the suggestion of the president, Messrs. W. H. Grenell, J. C. Robinson and and E. L. Page, were appointed an Obituary Committee to report suitable resolutions of sympathy and condolence.

President Green deplored the fact that more progress has not been had in extending the use of the central system. He called attention to the praiseworthy labors of Secretary C. E. Kendel in preparing a full index to all the past proceedings of the association, so that it is now possible to refer to any paper or report read at the conventions during the past twenty-five years. Printed copies of this index were distributed.

Mann Pure Seed Bill.

Attention was called to the introduction into the House of Representatives of H. R. Bill 13835, known as the Mann Pure Seed Bill which, while drafted with the best intentions, has seemed to cause serious alarm to legitimate business interests. At the instance of President Green, after the bill had progressed to a certain stage as explained by him, a representative meeting of seedsmen was called by him and held at Chicago on April 10 last, when the proposed bill was thoroughly discussed, and many suggestions for desirable changes formulated. Messrs. J. C. Vaughan, C. N. Page, Chas. Dickinson, W. P. Stokes and Jerome B. Rice were named as a committee to represent the seed trade at the hearing at Washington before the Interstate and Foreign Commerce Committee on April 21. Of this committee Mr. Green was chairman. In addition to the members of the committee above named the following gentlemen presented arguments: Alex. Forbes of Peter Henderson & Company, Curtis Nye Smith of Jos. Beck & Sons Corporation, S. F. Willard of Comstock, Ferre & Company, E. V. Hallock, Queens, N. Y.; and among others in attendance were F. W. Bolziano, Washington, D. C., E. C. Dunagan of Wm. Henry Maule, Philadelphia, Pa., H. L. Holmes, Harrisburg, Pa., and J. M. Lupton, of Mattituck, N. Y. At the close of the hear-

ing the assurance was given that no further action would be taken upon the bill at that session of Congress, and that the arguments presented by the seedsmen, together with letters received by Mr. Mann, would be made a part of the records of the committee. President Green paid a high tribute to the authorities in Washington for the courtesy and fairness shown by them to the seed interests, the arguments presented being heard with patience, and ample time given, and no evidence exhibited in any quarter of any intention to injure the seedsmen as a class. A full account of the hearing, as embodied in a public document, was mailed to all members of the association at President Green's suggestion. Although many modifications, as suggested at the hearing, are before the committee, as yet none of these have been formally incorporated in the pending bill which is, therefore, liable to be again brought up without any modification whatsoever; it is believed, however, that Mr. Mann has been sufficiently enlightened, so that he will ask that the bill be again referred to the committee, and that important changes will be made in it before it is submitted to the House of Representatives. In further commenting upon this whole matter President Green took occasion to express his personal belief that it would be unwise for seedsmen, as a class, to oppose all regulation, as thereby they would lose an opportunity of which they might otherwise avail, of assisting in shaping a law that will be helpful rather than hurtful to honest dealers, as well as highly beneficial to the agricultural interests of our country. He further believed that a shortsighted policy of radical opposition to all regulation would simply react in precipitating conflicting State laws that would seriously cripple interstate business; whereas a well-wordsed, just and effective Federal law would serve as a model for State laws, which could easily be framed to conform to its conditions and thus restrict interstate business but slightly. President Green thinks that National legislation to prevent importation of seeds used solely as adulterants, and of low-grade seed containing a large percentage of weed seeds, and to correct other abuses in the trade, is inevitable. It is in line with the present policies to which the American people have been committed. He urged the wisdom of harmoniously co-operating with the Washington authorities, adding practical business experience to their technical and legal knowledge to the end that we may secure wise and conservative legislation that will protect all interests alike and injury none. Anything which will prevent the growth of mushroom and unscrupulous competition is a help to the honest and legitimate dealer.

President Green then gave his reasons in detail, for opposing the Mann bill in its present form, and, at his suggestion, an executive session of the association was held Tuesday night in which the arguments pro and con were threshed out. His conclusion was that a law covering a new and untried field should only be aimed at flagrant, willful and deliberate wrongdoing and should not contain provisions tending to hamper and disorganize a highly useful and necessary business.

In closing, President Green complimented and returned his thanks to the Executive Committee and other officers of the association, and predicted that it would continue to prosper along the lines of greatest usefulness.

On motion of Mr. Page, of Iowa, the president's address was referred to a special committee of three: Messrs. Willard, Duryea, and May.

Miscellaneous Business.

The report of the delegates to the National Irrigation Congress was read by Secretary Kendel and, on motion of Mr. J. E. Northrup, the president was authorized to appoint a delegate to the next N. I. Congress to represent the American Seed Trade Association there.

A communication was read from Mr. Alex. Forbes of Peter Henderson & Company, N. Y., stating that nothing had been done of any practical moment by either the Committee on Congressional Free Seed Distribution, or the Committee on Proprietary Rights in Names of Plants and Seeds, which was recently established to act in conjunction with a like committee from the Wholesale Seedsmen's League.

The Committee on Code Revision recommended that no radical action be taken at this time until after the conclusion of the agitation respecting pure seed legislation and, on motion, the incoming president was requested to re-arrange the personnel of the committee, so as to have it include equal representation from grass seed, garden seed and flower seed interests. The committee was continued under that understanding.

On motion of Mr. C. F. Wood, after some discussion,

a resolution was adopted favoring the adoption by the Government of a reasonable parcels post system. Mr. Albert McCullough opposed any endorsement of the parcels post. Those speaking in the affirmative were Messrs. Holmes, Buckbee, Woodruff and others.

Tuesday Afternoon Session.

At this session papers were read by the following: Dr. W. W. Tracy: Theoretical and Practical Seed Breeding; C. B. Smith: Farm Practice Investigations in Clover Seed Production; C. N. Keeney: The Effect of Low Prices on the Production of High Grade Stocks; Albert McCullough: Fire Insurance. This latter paper was quite generally discussed and, as an outgrowth thereof a Standing Committee on Insurance was authorized to be appointed by the president.

The report of the delegates to the National Council of Horticulture was read by Secretary Kendel, and evidences given of the successful work of this institution. A motion was adopted contributing \$200 to further the aims of the National Council of Horticulture and to continue the work of the press bureau in the interest of the seed trade. A resolution was also adopted authorizing the secretary to print, in the next annual report of the association, the proceedings of the Congress of Horticulture.

W. D. Ross, chairman of the committee on Experiment Stations, submitted his report, stating that the duties and responsibilities of these stations have been materially broadened and increased as the result of the Adams Act, passed March 16, 1906. The work carried on by Prof. Geo. E. Stone, of the Amherst, Mass., station was complimented, as shown by Bulletin 151, published February, 1908. Tobacco and onion are the two principal seeds that have received especial attention, and this bulletin also gives the result of his experimenting in seed separation and should be read by all seed growers. The Connecticut Station at Storrs is carrying on an extensive variety test with vegetables and will shortly issue bulletins on garden and field beans; they are also engaged in bean breeding with especial reference to heredity. Dr. C. D. Jarvis is organizing a Plant Breeders' Association and wants to induce all Connecticut growers to join. New Hampshire Station is interested in improvement of strains and varieties of vegetables by selection and hand-crossing and urges careful testing of all novelties. The report closes with a comment upon the Maine law which, the writer thinks, is but as efficient as the Maine liquor law.

The Committee on Postal Laws, etc., Chas. N. Page, chairman, then submitted a report.

Wednesday Morning Session.

The Committee on Fire Insurance reported a resolution offering to co-operate with the underwriters by furnishing experts from the seed trade to assist in appraising losses. The motion was adopted.

Obituary resolutions were passed on the death of Everett B. Clark, D. M. Ferry and Albert Plant.

Dick J. Crosby, agricultural educational expert, presented the views of the Committee on Horticultural Education appointed at the last meeting of the National Council of Horticulture at Norfolk. He outlined a four years' course in horticulture for high schools in order to meet the requirements of university admission; also a two years' practical horticultural course to prepare young men who work along commercial horticultural lines.

Mr. E. C. Dungan, of Wm. Henry Maule, Philadelphia, Pa., read his paper entitled

What Effect Does a Commercial Depression have on the Garden Seed Business.

The principal point made by the writer was that hard times give additional business to seedsmen through stimulating garden work. The paper contained a symposium of the opinion of the following seedsmen and firms: C. C. Morse & Co., T. Lee Adams, Barteldes Seed Co., Oscar H. Will & Co., F. G. Johnson, S. M. Isbell & Co., L. L. Olds Seed Co., John A. Salzer Seed Co., Northrup, King & Co., Otto Schwill & Co., Alexander Seed Co., T. W. Wood & Sons, J. Stecker Seed Co., F. W. Bolgiano & Co., Peter Henderson & Co., J. M. Thorburn & Co., The Page Seed Co., F. H. Ebeling, The Frank S. Platt Co., Comstock, Ferre & Co., W. W. Rawson & Co., Jos. Breck & Sons, Holmes Seed Co., Walter P. Stokes, W. Atlee Burpee & Co., S. D. Woodruff & Sons, Vaughan's Seed Store, Jerome B. Rice Seed Co. and Mandeville & King Co. The opinion of Wm. Henry Maule concludes the symposium with the argument that a commercial depression has a beneficial effect on the seed trade, adding many names to the ranks of seed buyers and planters.

The Use of Forage Plants as Soil Improvers.

Under this heading, and speaking for "In the North," Mr. J. E. Northrup, of Northrup, King & Co., of Minneapolis, said, in part: Millet grown on new land for hay is a soil improver but, grown on old land, for seed, it is just the contrary. Forage crops are good or bad ac-

ording as used in rotation. The manner of harvesting is an important factor. In the Northwest, sheep, cattle and swine are turned into the fields to harvest the crops, thus saving labor and fertilizer. Field corn in the Northwest is becoming a standard crop; here superior quantity and quality of the forage gives a substitute for Summer fallow. Wheat on corn land made twenty-five bushels at the North Dakota trial station, where the crop from land sown continuously in wheat for seven or ten years was less than three bushels to the acre. Corn grown on semi-arid lands prepares for the succeeding crop equal to Summer fallows alternate years. Entering farmers sow rape or clover with corn and pastures with sheep or cattle until they are fit for the flock.

Clovers take the second place as forage, but are equal to corn as soil improvers. The best results are obtainable from corn and clover in short rotations with small grains. The introduction of clovers in the prairie soils of the Northwest has restored fertility and surprisingly increased the value of farming lands, as it draws potash and phosphoric acid from the subsoil.

Field peas are becoming another standard forage crop of the North. Oats and peas in mixed crop form an excellent substitute for clover hay, and the acreage thereof is largely increasing. Large narrowfat peas are being planted to destroy the growth of quack grass, Canada thistle, etc. Fodder corn, millet and sorghum are also grown for the same purpose. Millets are used extensively in rotation with small grains where clover does not succeed; these improve the condition of new soils and produce large wheat yields. Sorghum is taking a permanent place as a forage crop of the North. It yields abundantly of a sweet and nutritious forage that is superior to the Southern varieties of fodder corn. It is sowed in drills with spaces between the rows. One bushel of seed per acre is required to make small leafy stalks and, when pastured with sheep or swine, it is a soil improver. Dwarf Essex rape is another standard forage crop of the Northwest; many tons of seed are annually sown with small grains, making a splendid after-feed on stubble fields. It is also grown amongst corn sown at the time of last cultivation.

When pastured, sheep will fatten on the plants producing cheaply a catch crop of value to stockmen. It is also used as a cover crop in orchards where root-killing trees prevail; also on soils inclined to drift in wind or to wash from heavy rains. Root crops are not grown as extensively as they should be on account of cost of harvest and storage. If pastured during Fall and early Winter months considerable fertility is restored to the soil and the expense of harvesting eliminated. The cultivation of soil for root crops results in larger after-yields of cereals. Pasture grasses should be included in all crop rotations; these provide root-binding properties and give fertility to the soil. Vetches, turnips, kohlrabi and non-sacharin sorghum are sometimes grown for forage in the Northwest, but not yet over large areas.

A paper on the same subject was then read by Mr. Henry W. Wood, of T. W. Wood & Sons, Richmond, Va., covering, "In the South." Mr. Wood recommends crimson clover and cow peas, also soja beans, as Southern soil improvers for this section. Mr. Barnes recommended sorghum highly as a forage plant for northern New York and Vermont.

Wednesday Afternoon Session

Disclaimer Discussion.

The greater part of Wednesday afternoon was devoted to a discussion on the resolutions proposed by Mr. Leonard H. Vaughan of Chicago, which were adopted. These urged the discontinuance of any indefiniteness in the wording used by seedsmen, and insists that all members stand by the official disclaimer, using it on letters, bill heads, catalogues, containers, order sheets, etc. Mr. Vaughan also gave an interesting paper on the legal aspects of the disclaimer, and was followed by Mr. S. F. Willard who, recounting the past history of its use by the society, upheld its continuance in all cases. Albert McCullough related an instance where the disclaimer was very valuable as a preventive of lawsuits. Mr. Briggs, of Toronto, followed in the same vein, advocating strongly that source of seed should be held to as strict accountability as possible; no honorable seedsmen would stand absolutely upon his protection under the non-guaranty clause if he knew the seed was faulty. Growers should exercise the greatest caution. Messrs. Ebeling and Schisler related instances of fraudulent attempts on the part of buyers, where not deserving to be reimbursed. Mr. Page of New York advocated a liberality in adjusting claims even where the non-guaranty clause had been used; Mr. Robertson advocated the same policy. Mr. Parmale thought that the whole burden should not fall on the grower, for the latter has no one to fall back upon.

Mr. Vaughan read a Government report, showing as many as sixty different styles of disclaimers in use by as many seedsmen. On motion of Mr. Charles M. Page, the secretary was directed to send out a special circular, calling attention to the desirability of all members using a uniform disclaimer.

Place of Next Meeting.

Atlantic City, Put in Bay, and Portland, O. are tendered invitations for the next convention.

Foreign Pure Seed Laws.

A communication was read from Joseph Barenbrug, of Barenbrug, Burgers & Co., Arnhem, of Holland, giving an abstract on the pure seed laws in foreign countries.

The Banquet.

A most enjoyable banquet, held at the Hotel Pontchartrain, and tendered by the local seedsmen, was participated in by the members of the association on Wednesday evening, June 24. Mr. J. E. Northrup acting as toastmaster. The speakers were: President George S. Green, Philip Breitmeyer, L. L. May, Wm. S. Farrell, Watson S. Woodruff, Leonard H. Vaughan, Chas. N. Page, H. W. Wood, H. M. Carmody, L. Bolgiano, C. E. Kendel, S. F. Willard, Fred. Plant, J. C. Robertson, Frank White, J. C. Vaughan and Wm. Stecker.

Notes.

Mr. Albert McCullough will, with his family, leave directly from the meeting for London, England.

Messrs. D. M. Ferry & Co. tendered to the members and their guests a boat ride on Thursday afternoon, and also an invitation to visit their trial grounds on Wednesday morning.

Visiting ladies are being shown special courtesies.

The Following New Names Were Proposed for Membership:

Southern Fruit Co., Charleston, S. C.
American Seed Company, Detroit, Mich.
Robt. C. Reeves Company, New York, N. Y.
Stuopp & Walter Company, New York, N. Y.
Western Seed & Irrigation Company, Fremont, Neb.
Jas. J. H. Gregory & Son, Marblehead, Mass.
German Nursery & Seed House, Beatrice, Neb.
J. Howard Hiss of W. A. Simpson & Co., Baltimore, Md.
The Ross Seed Co., Louisville, Ky.
Agnew Seed Co., Greeley, Col.
Oliver J. Barnes, Malone, N. Y.
Bromfield & Colvin, Bay City, Mich.
Arthur T. Boddington, New York, N. Y.
Chesmore Eastlake Mercantile Co., St. Joseph, Mo.

Among the Members Present:

George S. Green, Chicago, Ill.
Marshall H. Duryea, New York, N. Y.
F. W. Bolgiano, Washington, D. C.
C. E. Kendel, Cleveland, O.
Leonard H. Vaughan, Chicago, Ill.
Henry W. Wood, Richmond, Va.
C. S. Burge, Toledo, O.
Chas. N. Page, Des Moines, Ia.
Watson S. Woodruff, Orange, Conn.
Albert McCullough, Cincinnati, O.
S. F. Willard, Wethersfield, Conn.
Dr. W. W. Tracy, Dept. of Agriculture, Washington, D. C.
C. B. Smith, U. S. Department of Agriculture, Washington, D. C.
J. E. Northrup, Minneapolis, Minn.
E. C. Dungan, Philadelphia, Pa.
R. J. Crosby, Department of Agriculture, Washington, D. C.
C. N. Keeney, LeRoy, N. Y.
Geo. H. Atkinson, of Stokes Seed Store, Philadelphia, Pa.
Francis Brill, Hempstead, L. I.
The Brown Bag Filling Machine Co., Fitchburg, Mass.
John J. Buffington, Baltimore, Md.
O. J. Barnes, Malone, N. Y.
Bromfield & Colvin, Bay City, Mich.
F. M. Clark, of Everett B. Clark Seed Co., Milford, Conn.
C. Herbert Coy, of Coy Seed Co., Valley, Neb.
A. Currie, Jr., of Currie Bros. Co., Milwaukee, Wis.
Theo. Cobb, of D. M. Ferry & Co., Detroit, Mich.
C. B. Coe, of H. M. Perry & Co., Detroit, Mich.
Adolph Cornell, of Schisler-Cornell Seed Co., St. Louis, Mo.
Edward C. Dungan, of Wm. Henry Maule, Philadelphia, Pa.
H. B. Fish, of Henry Fish, Carpinteria, Cal.
J. H. Ford, of Ford Seed Co., Ravenna, O.
H. E. Fiske, Seed Co., Boston, Mass.
J. J. H. Gregory, Marblehead, Mass.
Jerome B. Rice, Chicago, Ill.
Chas. P. Guelph, of Jerome B. Rice Seed Co., Chicago, Ill.
W. H. Greenel, Saginaw, Mich.
A. D. Hutton, of The Albert Dickinson Co., Chicago, Ill.
Chas. D. Boyle, Secretary the Albert Dickinson Co., Chicago, Ill.
G. N. Davis, of the Albert Dickinson Co., Chicago, Ill.
Arthur H. Goldsmith, of John Lewis Childs, Floral Park, N. Y.
F. H. Huyck, of the Illinois Seed Co., Chicago, Ill.
J. Wm. Jefferson, of National Seed Co., Louisville, Ky.
H. B. Johns, Millington, Mich.
Sioux City Seed Co., Sioux City, Ia.
Fred. B. King, of Mandeville, King & Co., Rochester, N. Y.
Wm. Koelr, of Fanner Seed Co., Fairbault, Minn.
Geo. A. Kreschuh, of Toledo Field Seed Co., Toledo, O.
Kirkby & Gundstrup Seed Co., Chicago, Ill.
Arthur H. Luck, of German Nurseries, Beatrice, Neb.
Andrew McMeans, of Ontario Agricultural College, Guelph, Ont.
J. S. Michael, of Sioux City Seed & Nursery Co., Sioux City, Ia.
L. Harry Mixson, of Southern Fruit Co., Charleston, S. C.
W. D. Murray, of Springfield Seed Co., Springfield, Mo.
J. W. May, Alexandria, Va.
Edwin B. Northrup, St. Paul, Minn.
S. A. Wilson, of L. L. Olds Seed Co., Clinton, W. Va.
Geo. H. Parvin, of the J. M. McCullough's Sons Co., Cincinnati, O.

The American Peony Association.

Annual Meeting at Ithaca, N. Y.

The annual meeting and exhibition of the American Peony Association was held in rooms of the Department of Agriculture, New York State Agricultural College building, Ithaca, N. Y., June 19 and 20. The exhibition was small, due to the lateness of the season. The date for the meeting was set at such a time when the trial plots in Ithaca should be at their best. While the trial grounds were one mass of bloom, the season for most of the growers had been past by a week or ten days. Therefore, a large percentage of the flowers staged were cut in Ithaca. Two outside growers, however, made a very creditable showing; Prof. Saunders of Clinton, N. Y., and T. C. Thurlow & Company of Newbury, Mass., both sent large consignments.

After the exhibition had been studied by the members, the regular business meeting was called at 3 p. m. in the Horticulture Lecture room by Secretary Fewkes in the absence of President Ward, and Vice-President Peterson.

Mr. E. A. Reeves was elected chairman of the meeting. The minutes of the last meeting was read and approved.

Mr. R. T. Brown, representing the Cottage Gardens Company, spoke on behalf of Mr. C. W. Ward. He explained that Mr. Ward was unavoidably detained in the West on a pressing business trip, and regretted greatly he could not be present at the meeting.

Report of the Secretary for 1908.

The present membership of the society is 49, not including four honorary members. It is gratifying to note that the membership is steadily increasing, slowly to be sure, but in a substantial manner. Those who have dropped out are few and greatly overbalanced by the new members who are annually admitted.

Since the last meeting the work of the society has been progressing. The Committee on Diseases has sent out a large number of inquiries, which have brought out much information, but which has not as yet been reduced to an orderly condition.

The Nomenclature Committee has the result of the work done by Mr. Coit last Summer, in the press, in the form of a bulletin, which will be issued shortly.

The secretary has the proceedings of the society for the five years, from 1903-1907, inclusive, in the hands of the printers.

In response to the circulars sent out by Prof. Craig last July in regard to forming a supplementary test collection, a large number of roots were sent in and were planted in accordance with the expressed wishes of the society. These, as well as the older collection, were topped with stable manure in the Fall, which served as a mulch last Winter.

The exhibition held during the meeting last June was somewhat disappointing, owing principally to the lack of growers in the immediate vicinity of Ithaca, and the dates being unfavorable to those at a distance. However, the Cottage Gardens, Queens, N. Y., made a very creditable display. There were also displays from Ellwanger and Barry, S. G. Harris, Geo. Hollis, Prof. A. P. Saunders and F. C. Walcott. These, while not so extensive as the first, added materially to the show.

In regard to the diseases of the peony, we cannot be too watchful or too persistent in our endeavors to learn all that can be found out about their nature and means of prevention. To the commercial man the matter is not of a directly serious nature, but to the amateurs and indirectly the commercial man it is most serious.

I have in mind a peony garden near Boston, which was stocked with many rare and choice varieties. Many of the plants had reached their third and fourth years and were fine, large specimens. During last Summer the wilt and black rot attacked many of them, causing much loss and distress to the owners. In the Fall large roots were dug up, which were completely destroyed. This is but one instance. There are many others who are sufferers and so situated that they cannot change their plants to new ground but must either give up growing the peony or find some means of checking or preventing the spread of these diseases.

The report was adopted.

The Disease Committee.

A letter was read from Prof. Whetzel saying that conditions over which he had no control made it impossible to attend the meeting. However, he assured the association that he was hard at work on peony diseases and expected to be able to publish results soon.

The Trial Plot.

A general discussion followed with reference to the present trial plot. While all agreed that the plants looked as well as could be expected under the existing conditions, general regret was expressed that the land could not be more properly drained.

A motion was made and carried to change the price of check list from \$5.00 to \$2.00.

Meeting Place for 1909.

The selection of a meeting place for 1909 was discussed. A letter was read from the Minnesota Horticultural Society inviting the Association to hold their next annual exhibition at the Minnesota State Fair grounds between the twin cities.

Mr. Brown, by request of Mr. Ward, invited the Association to hold its next meeting at Cottage Gardens, Queens, N. Y.

After a lengthy debate, it was decided that better work could probably be done in regard to straightening the nomenclature if the meeting were held at Cottage Gardens rather than in a more remote place from the peony centers.

It was moved and unanimously voted to accept Mr. Ward's kind invitation.

List of Awards.

Largest and best collection of varieties, one flower of each: 1st, T. C. Thurlow & Company.

Best 50 blooms, dark pink or rose: 2d, T. C. Thurlow & Company.

Best 50 blooms, flesh or salmon pink (Baroness Schroeder): 2d, T. C. Thurlow & Company.

Best 50 blooms, crimson: 1st (Marochal Valliant), T. C. Thurlow & Company.

AMATEUR CLASSES.

Collection of not less than 12 varieties, one of each: 2d, Prof. A. P. Saunders.

Best and largest collection of white varieties, one bloom of each variety: 2d, A. P. Saunders.

Best collection of rose-pink varieties, one bloom each: 1st, A. P. Saunders.

Best collection of salmon-pink varieties, one bloom of each variety: 1st, A. P. Saunders.

Best collection of tricolored varieties, one bloom of each: 2d, A. P. Saunders.

Best collection of crimson varieties, one bloom of each: 1st, A. P. Saunders.

Best six blooms of any variety: 1st, A. P. Saunders.

CLUB AND SOCIETY DOINGS

MASSACHUSETTS ROSE AND STRAWBERRY SHOW.—Flower lovers of Boston had another grand treat on Saturday and Sunday when the rose and strawberry exhibition of the Massachusetts Horticultural Society was held. The main hall and the small side hall were each filled with many fine exhibits. In the rose collections the varieties Frau Karl Druschki and Mrs. R. G. Sharman-Crawford were much in evidence and their delightful colors were pleasing to every one. A feature of the exhibition was the collection of water lilies from the Harvard Botanic Gardens. R. & J. Farquhar & Company had a very fine table of Spanish irises, the color arrangements being fine. A bronze medal was awarded this exhibit. A table of a new *Campannula perisifolia* from the Blue Hills Nursery was a striking exhibit and Mr. Heurlin was awarded a first class certificate for it. Honorable mentions were made of the peony display of T. C. Thurlow & Company, of the peony display of George Hollis, of the display of herbaceous flowers of R. & J. Farquhar & Company and of rose Ruby King of Frederic J. Rea.

Other notable exhibits were the collections of herbaceous flowers from the Bellevue Greenhouses, from Frederic J. Rea and from Mrs. E. M. Gill. The rose displays from Miss Sarah B. Fay, William Riggs, J. G. Wright, Col. Fred. Mason and W. J. Clemson were very fine. In the prize collections, Miss Sarah B. Fay and W. J. Clemson were the winners for roses. The Blue Hills Nurseries carried off all the prizes for herbaceous flowers. William Whitman and Mrs. J. L. Gardner took the prizes for delphiniums, and also for Canterbury Bells.

There was an excellent exhibition of strawberries, some of the newer varieties being exceedingly fine. Vegetables, too, were very creditable, the chief feature being Farquhar's new tomato from William Downs, which received a first class certificate of merit.

J. W. D.

A Portion of the Peony Plot in Full Bloom on the Trial Grounds at Ithaca, N. Y.

Election of Officers.

The following officers were elected: President, C. W. Ward; vice-president, C. J. Maloy; secretary, A. H. Fewkes; treasurer, J. H. Humphreys; director, E. A. Reeves.

The following were elected to membership of the Association: C. Hannon Payne, 141 Wellmeadow road, Hartford, London, Eng.; William Miller, Bar Harbor, Me.; John Cayers, Oakville, Ontario, Can.; F. R. Pierson, Tarrytown, N. Y.; E. V. Hallock, Queens, N. Y.; John Merkl, Mentor, Ohio.

The following committee on awards was elected: A. H. Fewkes, B. B. Farr, R. T. Brown.

Three Exhibits of Fifty Blooms Each Made at Ithaca.

By T. C. Thurlow & Company, West Newbury, Mass.

ALEXANDER WALLACE

"Be thou faithful unto death and I will give thee a crown of life"

THE life history of Alexander Wallace, his struggles, his hardships and his successes, is a record worthy the attention of all, and more particularly recommends itself to those who, under similar adverse circumstances, may well take to heart the lesson to be learned—the old, old story of how an indomitable will, ambition, desire for a position at the top, or call it what you may, urges its possessor on and always forward, to higher accomplishments and still grander fields and performances.

It has been given to the writer the privilege of sharing with Alexander Wallace, for nineteen years, in much of his work, to partake of his close confidence, to hear from his lips many episodes in the history of his early life, and it was one of his last expressed wishes, a few hours before death, that his obituary should be written by the undersigned.

When for nearly a score of years you stand, figuratively, shoulder to shoulder with a comrade at the breach and on the firing line, when you share in the triumphs and the defeats, relationships become close, and confidences are exchanged, which, under other circumstances, might remain as sealed books.

Thus, it became the privilege of the writer to learn much of the story of his early boyhood —of its privations, its sternness and its bitterness. In these early days our friend suffered much; more so than this short history may reveal. His early life clouded, his lot like unto that of a serf, he broke loose all the fetters, and, through inborn and developed talent, patience and perseverance, worked himself up, unaided and hampered at every step, to a height of manliness and to a sphere of usefulness to his fellowmen entitling his name and memory to a place on the Roll of Fame.

At three years of age he was bereaved of a mother's love; of a father's protecting arms he never knew. From his mother he inherited a grand singing voice, and at nine years of age led a choir. From his father's side came the constant urging of the inner spirit that was his prompter to achieve a higher calling.

His schoolmaster was John Keppie, a worthy man in Laurencekirk, who seeing the good material in the boy, aided him all in his power, and cried with grief when, still a mere lad, he was summarily taken away to labor in a farmer's fields from early morn until dark (and the Summer days are long in Scotland). Mr. Wallace's love for his old schoolmaster was feelingly expressed at the death of Keppie, some two years ago, in an ar-

ticle on that worthy which he published in the Scottish American. This schoolmaster's kindness to him was, so far as we know, the only bright spot in the youth's early history. All other remembrances, until past the age of fifteen, were but of roughness, blows, the hardest of work and the scantiest of fare. At the age of thirteen he was teed out to a farmer, and his life for the next two years was that of the most menial drudge. Such an experience might well daunt the bravest, the most rugged, and crush forever the spirit and desire for advancement. If of ordinary mould, these notes would have been uncalled for; but this boy's ambition was not to be so stifled.

At the age of fifteen we see him finding employment with the Caledonian Railroad in his native village, and many are the anecdotes he has told of his first experiences there. Human nature may be as kindly in this Northern country as here, but, if so, in those early days it was often cloaked under a guise of severity that was as good as real.

Acquitting himself creditably here, he was transferred to Montrose, and later to the Railroad Clearing House in London, subsequently going to Dundee as private secretary to Thomas Thornton a prominent attorney-at-law and city councillor who was, later, knighted by the Queen.

Shortly after entering into railroad employment, he took up the study of shorthand, and, as he loved to re-

AS A STENOGRAPHER

late the story, with his first three-pence (six cents) he bought a primary edition of Isaac Pitman's shorthand system, and studied it through unaided. The end of this little treatise reached, and no money obtainable with which to purchase a more advanced work, he carefully started in over again at the beginning of the primary, and when he had for the second time studied it through, he was master of the principles of this standard system of shorthand. His progress in this study was henceforth rapid, and we are informed that at the age of seventeen he carried off the second prize in a competition open to all Scotland. It may not be generally known that Mr. Wallace stood among the highest in proficiency in shorthand; he was a most rapid writer and his transcriptions were always absolutely correct. It was this fact which made him so useful to Thomas Thornton. His knowledge of this art was such that he could transcribe with ease the work of almost any other stenographer, without regard to which of the systems the notes had been written in.

This able lawyer proved a hard taskmaster; he was an irascible

THE LATE ALEXANDER WALLACE

Born at Laurencekirk, Kincardineshire Scotland,
November 21, 1859.

Died in the Borough of Brooklyn, New York City, at
5 p.m. on a glorious day of June, the 17th inst., 1908.

man, very tyrannical, and extremely hard to please. Listening to his stories of the tasks imposed upon him by Sir Thomas, we have often wondered at his patience in remaining there so long under so arbitrary an employer, but we have reason to believe that Mr. Wallace at that time had some leanings toward the profession of the law, and for advancement's sake was willing to submit to much. Few men there are in this day who would stand the gruelling tasks this lawyer put him through, more especially so when we bear in mind that no recognition in the shape of extra pay, seldom even of thanks, accompanied the delivery of the completed work. To give an idea: Thornton, one Saturday, dictated a lengthy brief which took him in its delivery until almost midnight, then gruffly said, "You must have the transcription Monday early," charging Mr. Wallace at the same time, with the old-fashioned hypocrisy, that he must not violate the Scottish Sabbath. Mr. Wallace worked at this transcription from early on the Sunday morning until after midnight, and presented the brief, accurately rendered, early on the Monday morning. Should an error have been made, he would have been roundly berated.

He was also one of the fastest longhand writers I have ever known. His speed was phenomenal and his "copy" clean, clear-cut and readily followed by any compositor.

After a service of some years with Mr. Thornton, Wallace again went to London, and, with his friend James Dunbar, in 1882 came to the United States, staying here but a short time. He returned to Montrose, Scotland, going back into the employment of the Caledonian Railroad Company; from thence to Glasgow, and again in Thornton's employ until he came to the United States in 1888 for the second time.

Naturally endowed with a memory of surprising strength, the study of shorthand undoubtedly assisted materially in Mr. Wallace's mental development. As an instance: One Summer night, some years ago, we walked from Fulton Street, New York, to the New York Florists' Club rooms, then at 28th Street and Broadway. A night or two previously, Mr. Wallace had attended some scientific lecture. He had made no notes, and the subject to him was not a familiar one, yet for forty-five minutes, the duration of the walk, he repeated to the writer, almost word for word, the lecture as it had been delivered.

He was at one time regimental schoolmaster of the 79th Cameron Highlanders. In this vocation he proved his value not only to the children of the soldiers, but to the soldiers themselves, and for his efficient work and for the high standing to which he brought his classes in their examinations by the inspector, he was highly recommended. Studying here himself, meanwhile, he successfully passed an examination for a ranking command, defeating the sons of two eminent officers who, plucked at college, had been compelled to attempt entry through the ranks.

In December, 1888, THE FLORISTS' EXCHANGE was founded. Many remember its early history and its frail appearance. Before it had been running one year, the writer, who at that time was conducting a printing office, acting as compositor, proofreader, paper cutter, errand boy and boss, and all that goes with a struggling business, found it impossible to handle it all, and advertised for a man to assist him write wrappers, keep the advertising books (not that these records were at that time very heavy), act as assistant editor and do whatsoever came to his hand. Alexander Wallace was amongst those who replied to the advertisement; his verbiage was good, the handwriting clear, and it was recognized that here was possibly talent and value. He was requested to come at once, but did not respond. A boy was then sent to his address and persuaded him to call. He made his appearance in the office and was immediately employed at the munificent salary of \$7 per week and a commission. The amounts sounds small, but when the rate was fixed, the writer was wondering where the money was to come from to meet his increased pay roll. Since then Mr. Wallace's services have been wholly with THE FLORISTS' EXCHANGE.

During its first years THE FLORISTS' EXCHANGE was "made up" at night at the writer's house. This was his "relaxation" from the daily cares of a constantly increasing printing business. Mr. Wallace always participated in this night labor and early exemplified that "thoroughness" in all his undertakings which was so marked a characteristic with him; all that he put his

hand to was so absolutely well done as to quickly earn for him entire confidence.

It was hard and uphill work in those early days. All the composition, presswork and mailing of the paper was done in the office, and, THE FLORISTS' EXCHANGE being the least importunate customer, had to take a back seat and wait its turn when other clients pressed. Thus, much of this portion of the work was often done at night, and on Saturday morning Mr. Wallace would go to the post-office with the entire edition in a mail pouch slung on his back. No discredit here; no record for shame. This work and these early difficulties were never forgotten; they are the concomitant of all effort for betterment on the part of those struggling from the bottom of the ladder.

Mr. Wallace's first work of note—a "scoop" as the pressmen call it—came about with the death of Peter Henderson on Friday, January 17, 1890, at 10:30 a.m. The sad news reached us at noon, just as we were going to press. The forms were stopped, while Mr. Wallace hurried around to the Cortlandt street store, and, after a thrice repeated attempt, obtained the ear of Mr. Forbes and secured a more complete and correct obituary notice than was published by any of the daily papers the following morning. We always looked on this as the first real step in the making of THE FLORISTS' EXCHANGE and the credit is due to Mr. Wallace's Scotch persistency and knowledge of shorthand. The first exhibition reported by him was the orchid show at Short Hills, N. J., in February, 1890, by Pitcher & Manda, and was a stickler to the novice, as may be readily imagined. Mr. Wallace at that time had no technical knowledge of the business, and orchids possess some hard names.

Our old friends know the business side of the story of Mr. Wallace's life, for it is the story of the paper; this is why we have dwelt so fully on the always interesting days of his early youth, and have done so trusting that the narrative of hardship and emergence therefrom may stimulate young men who to-day may be suffering from discouragement.

Alexander Wallace was always a noted figure. He did not appear as a debater and seldom took part in the discussions. His capacity for labor was prodigious. Writing for his paper into the very small hours after midnight, he was one of the first to make his appearance in the morning, and his bright face and prepossessing manner were an attraction to all.

He was there as a chronicler on behalf of the trade—a clear, clean-cut narrator of events as they took place, and his judgment as to what to publish and what to suppress was almost infallible. With more work on his hands than any man there—work that did not admit of a minute's delay, he still found time to pass a friendly word with every man present, and he seemed to know them all by sight and by name. May we not say for him that never at these functions was there present a more popular character? He was not a politician, and never betrayed confidences, so was implicitly trusted by opposing sides. And, bring this close to your heart, reader—his principles of total abstinence did not injure his popularity one little mite, proving conclusively that a man may be "Hail fellow, well met," and live the life of a teetotaler.

Patiently plodding through documents innumerable in the search for one fact it was necessary to obtain to complete his article, or, in the rush of "going to press,"

it was always the same Wallace—smooth of temper, patient, ready to stop in his labor

to help out another or to entertain a friend; nothing left undone, nothing left over until to-morrow, everything completed and all things well done. As was well expressed by a contemporary last week: "One of Mr. Wallace's most striking characteristics was his thoroughness. Whatever he undertook he followed up to the minutest detail, and his analytical exactness was in evidence in all his work."

Mr. Wallace was not a man of scintillating brilliancy. He was a student. His writings were seldom the resultant of bright flashes of genius or of wit, but the outcome of patient study and long-continued investigation. He made sure first, with the in-born caution of the Scotsman, that he was right, and then he went ahead. Henceforward, no argument could upset the judgment so deliberately matured, and, generally speaking, he was always in the right.

He forced his way into prominence through the sheer force of his God-given intellect, which no obstacle could daunt. He filled a large niche in the affairs of THE FLORISTS' EXCHANGE, and

when the abrupt announcement of his sudden and entirely unlooked-for demise came to the writer, it was "as if the world had changed in one day."

In addition to the art of stenography, over which he had gained complete mastery, all his leisure moments were spent in study. During a two years' course, he

AS A STUDENT became a proficient Spanish scholar, speaking that language as fluently as a native. He was also well versed in French, and understood quite a little of German. He was a continuous reader of high-class literature and, through his retentive memory, was enabled to profit largely therefrom.

Few may realize the extent of Mr. Wallace's devotion to literature. He was a writer of poetry, and a constant contributor of

AS A WRITER short stories to the Scottish-American, many of which embodied facts in connection with his own early life.

We here reproduce a touching little poem, mute symbol of his remembrance of his mother; it was first published in the Scottish-American.

MITHER'S KISS

When infant pains perplexed me sore,
An' ailments, boom what I cud bear,
Robbed childhood o' its bliss,
A balm that failed tae cure but rare
Was mither's soothin' kiss.

When langed wrangs, 'boot bood or br',
War rankin' in my bosom sore,
An' things wad gang amiss,
A truce was made atween us a'
By mither's lovin' kiss.

An' when I left my dear auld hame
Tae Fortune seek—that fickle dame—
The goal tae hit or miss,
The guide that pointed strait my
aim
Was mither's partin' kiss.

Tae me nae kindly car she's lent,
But o' a' the trials by F. J. me sent
The hardest yin was this
When ower a pale, worn face I bent
For mither's dooin' kiss.

When Boatman Death, sae grim an'
hoar,
My soul has safely ferried o'er
The great unknown abyss,
May it greet me on theither shore—
My mither's welcome kiss.

ALEX. WALLACE

New York, February 3, 1897.

In the year 1900, he prepared, for the Sixteenth Annual Meeting of the Society of American Florists, in this city, the Souvenir Book of the New York Florists' Club, a painstaking and thorough record of the annals of early horticulture in and around New York City, a work which occupied him through many months of patient research in the libraries, and which brought him great eulogium. It is a standard history of those days.

In November, 1906, Mr. Wallace forwarded an article entitled "What Scotsmen Have Done for Horticulture in America," to be read before the members of the Scottish Horticultural Association, which he had prepared at the request of the secretary of that body. This paper again furnishes evidence of the thoroughness with which he went into everything he undertook. The paper was very comprehensive, and includes memoirs and data of every gardener and florist of Scottish birth having lived in the United States, who could be traced by the writer. In advising Mr. Wallace of the grand ovation which greeted the termination of his paper, the secretary of the Scottish Horticultural Society said that perhaps he (Mr. Wallace) had heard the

echoes of the cheer, across the Atlantic. This paper was widely copied in English horticultural journals and received much favorable comment.

Probably Mr. Wallace's most ambitious work, and that which will carry his name and fame down to posterity as an author, was the book published in 1903, entitled "The Heather in Love, Lyric and Lay." This work, the culmination of several years of patient scrutiny and delving through the libraries of America and Great Britain, is a complete synopsis of the history of Scotland's flower and emblem, including all the literature, both poetry and prose, which it was possible for the writer to glean. Note in the preface his profound affection for the land of his birth; he says: "I send forth this little volume, the result of some years of painstaking research during the spare moments

snatched from a rather busy life, as the tribute of an expatriated Scotsman to the mountain flower of his home land, hoping that a perusal of its pages may but deepen the ardor of Scotland's sons and daughters everywhere to continue to sing, with the best heart and voice at their command, the praises of their native Heather." The book is dedicated to his wife, Rachel Marion.

Mr. Wallace assisted largely in the compilation and editing of the various horticultural standard text books which have been issued from time to time by the publishers of THE FLORISTS' EXCHANGE. For this he was eminently fitted, and we desire to place on record here our sincere acknowledgments of the value of his services.

His uncompleted work was "Favorite Flowers of Robert Burns," and in the very last hours of his life he was regretting to his wife his inability to proceed with the work he had so lovingly set forth to do.

In all his writings his prompters were love and affection, for none of his labors were ever undertaken through a spirit of gain. Though frugal, the making of great riches did not appeal to him.

Mr. Alexander Wallace was for the last fifteen years, or, to be correct, since

SOCIETY May 8, 1893.
AFFILIATIONS and until his death, a member

of the New York Florists' Club, and served it in many capacities. He has been a member of the Society of American Florists since its eighth annual meeting, at Washington, D. C., 1892. He served, with credit, on its Executive Committee for three

years, having been appointed thereto by President Patrick O'Mara. He was a member of The American Carnation Society since its inception, in which he materially assisted, and was elected as an honorary member thereof. He was also a member of The American Rose Society from the beginning. For all of these societies he has done yeoman's services.

Of Alexander Wallace's labor in behalf of and its value to the cause of horticulture, we prefer that others, more competent to judge, should speak. We do know that

SERVICES TO HORTICULTURE within the past decade especially, the tone of horticultural trade journalism has greatly appreciated, and to Mr. Wallace should

be ascribed a full share of the credit, for he realized keenly the importance and responsibilities attaching to his editorship and ever strove to raise trade literature to higher planes. An article covering these lines has been prepared by a gentleman with

A PORTRAIT OF ALEXANDER WALLACE AT THE EDITORIAL DESK

Republished from the Tenth Anniversary Number of The Florists' Exchange, December 10, 1898.

whom he has been closely associated during all of the tenure of his office, Mr. Patrick O'Mara, than whom no man is better qualified to judge, and will be found immediately following.

Placing it on a pinnacle as the highest of all earthly possessions, Mr. Wallace was essentially a home man. There was no

FAMILY LIFE

place on all earth so dear to him as his own little abode; using his own words—"No man in Brooklyn had a better," and the height of a good man's affections were bestowed on his "little, wee wifey Jeannie," as he affectionately called her, Miss Rachel Marion Banta, to whom he was married in September, 1893. In his private character, he was kindly to a marked degree. The remembrances of his own early struggles impelled him to sympathize with those who were handicapped by fate or affliction; and Chinese, Japanese, Spanish and Scotsmen out-at-elbow, and the most depressed on earth, were always sure not only of his comforting words, but as well, of his active assistance; many are the hours he has spent in the defence of innocent Chinamen from hoodlums and the verdict of a wrongly-informed Justice.

With a sense of personal bereavement, each one feeling it keenly, some mourning as for a brother, others as for a dear friend whose loss it will be impossible

FUNERAL SERVICES

to make good, in an atmosphere of solemnity that was deep and inexpressible, the body of Alexander Wallace was laid away in Mother Earth in fair Greenwood Cemetery, amid the bright scenes of waving flowers, freshly blooming shrubs, stately trees and gorgeous sunshine—just such a scene as he himself would have selected had he had the choice. The funeral services were conducted by the Rev. James Gray of the Methodist Church, who dwelt upon the nobility and blessings of a Christian life. An address of singular depth of feeling followed by Mrs. Helen Temple Brigham, in which the speaker portrayed her definition of the progress of the spirit through the ages and the final reunion of all the loved ones on that better shore.

The esteem in which he was held by his many friends was beautifully shown by the rich floral tokens sent as a last respect to his memory. Never was seen a more lavish display of the choicest blossoms of Nature, and it looked as though each and every one, when selecting a flower to place near the bier of Alexander Wallace, had chosen that which was the richest and rarest obtainable. Orchids, gardenias, lily of the valley and roses innumerable, sent by a host of friends, surrounded his mortal remains.

In addition to personal friends, amongst whom were Japanese, Spanish and others whom the late Mr. Wallace had befriended, we noticed many representatives of the trade, staunch and old acquaintances:

A. T. De La Mare, David Tonzeau, James Dean, Jas. Griffith, J. G. Esler, directors of this Company; S. S. Butterfield, assistant editor of THE FLORISTS' EXCHANGE; A. Faulkner, representative of the American Florist; J. A. Shaw, representative of The Florists' Review; F. H. Traendly, Patrick O'Mara, John Scott, M. B. Faxon, W. B. Du Rie, Mr. and Mrs. John Donaldson, A. H. Langjahr, Chas. Weeber, John Birnie, II, and P. Dailedouze, H. Goldberger, formerly advertising manager of THE FLORISTS' EXCHANGE; S. Burns, W. P. Sheridan, J. K. Allen, G. Snedecor, D. Y. Mellis, Robert Simpson, R. Berry, Thos. Langton, Chas. Tofty, Mrs. Vincent, formerly wife of the late Thos. Russell, the first assistant editor of THE FLORISTS' EXCHANGE; Miss Jelinek, formerly stenographer in this office. The pall-bearers were Messrs. Peterkin, Kraus, Jordan, Eyerman, Boyle and A. Dorey, all of this office.

ARTHUR T. DE LA MARE.

RESOLUTIONS

At a special meeting of the directors of the A. T. De La Mare Ptg. & Pub. Co., Ltd., publishers of THE FLORISTS' EXCHANGE, held noon Saturday, June 29, 1908, the following resolutions were adopted:

WHEREAS, Most vividly the uncertainty of the tenure of life has been demonstrated through the sudden removal from our midst of our friend and fellow-worker, Alexander Wallace, who went for rest from pain and earthly cares, with a smile of perfect peace on his face, to the arms of our Heavenly Father, on Wednesday, June 17, 1908, and

WHEREAS, We desire to place on record our acknowledgments of his long and faithful career in the office of this Company, and to bear testimony to his zeal, diligence and unswerving loyalty in all things which made for our common good; therefore be it

RESOLVED, That in the death of Alexander Wallace we have lost a brother whom we mourn with all our heart, a tried and true coadjutor, a manly man, a faithful friend, a valuable citizen, and we do hereby express our profound and sincere grief at his untimely death in the hour of his matured mental vigor and manhood; and be it further

RESOLVED, That these resolutions be expressed in full upon the minutes of this Company, and a copy thereof sent to the bereaved widow of the deceased.

ABSENT, YET PRESENT

Much strength was within him; much gentleness, kindness, tenderness, much wisdom, much aspiration and far-reaching inspiration. "I'm sair to leave you, lassie," he faltered, and after compassionately lingering, passed out through the Twilight, but in through the Gates of the Morning. And the morning is in my heart, for he has returned with its dew and its sunlight. And he is not "yonder," but here, in secure, close, sweet comradeship. Praying wistfully,

"When Boatman Death, so grim an' hoar,
My saul has safely ferried o'er
The great unknown abyss,
May it greet me on the ither shore—
My mither's welcome kiss."

"the dear Lord" granted the yearning wish. Then he left with us the benediction, and to God gave the praise of a blissful smile beyond description. To the splendid brain, to the grand, sweet spirit, to the noble soul, to the heart that so tenderly sheltered and enfolded her, and to him who brought and gladly gave to her life its new happiness, his wife pays this heartfelt tribute of reverence, of respect, of admiration, of gratitude, and of love undying through all eternity.

Brooklyn, N. Y., June 23, 1908. MRS. ALEXANDER WALLACE.

MR. WALLACE'S VALUE TO HORTICULTURE

The announcement of the sudden death of Alexander Wallace came with stunning force upon those who knew him well and who admired him for his sterling qualities; these were many, for there are few connected with the florist trade who were strangers to him.

Death is ever a solemn and awesome event; there are few who can calmly receive the tidings of the passing away of a friend and associate without experiencing a shock. Philosophy may calm the emotions, religion may soothe and assuage the anguish, but there is no panacea after all for the wound.

It was my privilege to enjoy a close acquaintance with Alexander Wallace for about eighteen years. It was not long until I came to appreciate the sterling qualities which lay hidden behind a modest and somewhat diffident exterior. His dominant characteristic was loyalty. This quality in him was manifest in all his relations to his friends, his associates and his employers. Whatever he undertook to do was done with a painstaking fidelity which excited admiration. His mind was clear and his grasp of affairs was marvelously exact. A keen student of passing events, with a power of analysis far beyond the average, his value to horticulture in his capacity of editor was much above what most of us estimated and far above his own idea of his work.

In the councils of the New York Florists' Club he was invaluable. In his capacity for detail work, in his ready willingness to do it, in his power of initiative, in his unselfish enthusiasm for the broadest interests of the club, he was splendid. His like will not be readily found, and it is trite but true, his loss will be keenly felt, his place will not be easily filled. We all remember with gratitude and admiration his work in the Souvenir Book issued by the club in connection with the convention of the S. A. F. in 1900. This was but an index of the painstaking, intelligent, loyal work he did for the club. A faithful attendant at its meetings, he was watchful of its best interests, and his opinions ever rang true when serious affairs were being debated.

Hard headed, and clear headed always, he had little patience with sham and pretence, and never hesitated bravely and boldly to express his opinions. As a member of the executive committee of the S. A. F. he displayed the same loyalty, the same unselfish devotion, the same watchfulness, the same energy, the same zeal with which we were so familiar. It is futile to quarrel with an inexorable fate, but yet it seems a great pity that such a man should be called away just when he was attaining his full powers and when he could be of still greater service to the craft he loved so well.

June 23, 1908.

PATRICK O'MARA.

Tributes to the Memory of Alexander Wallace.

Here and there we find a man who loves truth with all his heart and soul and hates untruth with a corresponding hatred. Such were the thoughts on mankind that Thomas Carlyle gave expression to, and when I think of my very dear departed friend, Alexander Wallace, I feel that here was such a man as Carlyle had in mind when he penned his words.

Occasionally, events happen in our lives that make us want to sit down and give expression to our feelings. The sudden taking away of my friend Wallace impels me to write a few words, and to pay my tribute to his great and good nature.

For almost ten years he and I have toiled side by side, struggling together in our daily life, and I feel that among his many friends, outside of his own family, there was perhaps not one who enjoyed a closer intimacy with him, or had a better opportunity to note his many good qualities than the writer. His was a nature that every upright man loved—honest, truthful, faithful and, above all, sympathetic. When I call to mind the many downcast, destitute men, native of his own Scotland, that have called on him and, after a whispered conversation, departed with a smile on their faces, happy in the fact that their immediate wants were relieved, I realize that his sympathetic nature was known and appreciated in circles far removed from his own daily path.

His faithfulness to duty was such as few men show. When there was work to be done, he did it; and one great feature that stands out in his faithfulness to his paper and its readers is the almost superhuman efforts he would exert to give the latest and most authoritative information. If it was convention news, he would neglect his food and sleep rather than disappoint; and for scientific or general knowledge, he would devote his nights to research, in order that he could give his clientele the very best information possible.

In truthfulness he was a shining example. In whatever he said or wrote, he was the very acme of sincerity, and never uttered as a fact that which he did not know was positively true. In his voluminous writings he ever sought to be of help to his fellow men, and no task was too great for him to undertake if, by accomplishing it, he in any way could further the interests of the craft he was so long identified with. Added to his truthfulness and sincerity was a fearlessness of character that prompted him at all times to combat any and every statement which tended to misrepresent in any way an individual or the aims of any horticultural body.

His honesty, both in word and deed, was fully recognized by all who knew him. Those seeking his advice (and they were many) never failed to receive a straightforward expression of his opinion and help, if help was needed.

Personally, I have lost a friend—one of the very best friends I ever had. His kindly disposition and sympathetic nature, together with his wide knowledge on many subjects, acquired from his extensive reading and study, made him one of the most cheerful and lovable companions it was possible to find.

I cannot refrain from saying a few words about the deep reverence he had for the memory of his mother. It was his sad lot to lose her while he was a boy, but, how well he remembered her, and the affection he cherished for her, is beautifully exemplified in a poem, entitled "My Mother's Kiss," which he wrote in February, 1897, the last stanza of which reads:

When Boatman Death, sue grim an' hoar,
My soul has safely ferried o'er
The great unknown abyss,
May it greet me on theither shore—
My mither's welcome kiss.

S. S. BUTTERFIELD.

Assistant Editor of *The Florists' Exchange*.

Wallace is dead! A pall is o'er his sanctum and the chair from which he greeted his friends is vacant. His last requiem has been sung, and he has been laid to rest in beautiful Greenwood. In his death, horticulture is bereft of a champion, his family of a protector, and his friends of a kindred spirit. To know Alexander Wallace intimately was to love, admire and respect him. True as steel, faithful in his friendship and honest in purpose, he bore life's burdens without a murmur. The many hours spent in pleasant interchange of ideas will linger in our memories as long as pulses beat.

If immortality, and not oblivion, be our goal, we can rest assured that upon whatsoever shore or in whatsoever clime, the kindred spirits who have "passed over the crest," will greet us with their spirit presence, and William Scott and Alexander Wallace will give us a hearty welcome when we pass to the vale of flowers and the land of the unknown hereafter.

Saddle River, June 20, 1908. JOHN G. ESLER.

Truly I most fully appreciate your feeling and the trying situation under which you are placed. The loss of such an able and trusted assistant in your important work is a sad one, but nothing in comparison to the break in the chain of affection that has so long bound you two together. But few knew Mr. Wallace, his virtues and abilities, better than myself, and I feel as though a part of my own life had been taken. We were near together, near in many ways. It was my pleasure to have assisted him at a time when days were dark and friends were few. The fact of his coming to me made me love him and, while we had not recently seen much of each other owing to my many cares, the ties of affection never weakened; on the contrary, they ripened with our years. He is gone, but no man was ever nearer us than he is now. His noble, generous life, its power for good, is as strong to-day as ever. His life is still living, and will live as long as memory lasts.

Poor fellow, he has met that change we call Death. He still lives, although the machinery of life is broken, but in our hearts its influence is as powerful as ever. Farewell, dear friend, Farewell, Farewell!

Floral Park, N. Y., June 22, 1908. C. L. ALLEN.

I have learned through Mr. Stewart of the death of our friend, Mr. Wallace. I wish to express to you and members of his family my sincere regrets. He was a faithful employee, a good friend and a credit to his profession.

Boston, Mass., June 18, 1908. PATRICK WELCH.

We regret to learn of the death of your Mr. Alexander Wallace, and we tender you this expression of our sympathy in the serious loss you have sustained.

New York, June 19, 1908. J. M. THORBERN & Co.

It was with sorrow and sincere regret that we heard of the death of our esteemed friend, Mr. Alex. Wallace. We had learned to love his sterling qualities, in and out of business, as no matter where you met him, his right hand of friendship and help was ever extended. To his family we extend our fullest sympathy in this hour of bereavement, believing that his God and King, who does all things for our good, will take care of them, in this their severe trouble.

White Marsh, Md., June 22, 1908. R. VINCENT, JR. & SONS Co.

I was shocked and much grieved to learn of the sudden death of our mutual friend, Mr. Alexander Wallace. During the several years in which I have been connected with horticulture I do not know of one whose advice and counsel have been of more benefit than that given me by our departed friend. Therefore, to a certain extent, can I appreciate the loss sustained by you and wish to extend my sincere sympathy.

Berlin, N. Y., June 19, 1908. ARTHUR COWLE.

I was much shocked to learn of the death of Mr. Wallace. In this sad news I feel a sense of deep personal loss. He always set an example of cheerfulness and good nature which should be a model for us all.

New York, June 19, 1908. ARTHUR T. BODDINGTON.

Please extend to the wife of Mr. Wallace, our deepest sympathy in the hour of her sad bereavement.

Chicago, June 20, 1908. E. F. WINTHROP Co.

We regret very much to learn of the death of your Mr. Wallace. The writer's acquaintance with that gentleman extended over a period of a number of years, and in his death I feel a personal loss.

New York, June 20, 1908. HENRY NUGESSER & Co.

My brother and myself were shocked beyond words to hear of the untimely death of our mutual friend, Alexander Wallace. Truly, a good man has gone to his rest. We will freely say, with Burns, "If there is another world he lives in bliss; if there is none he made the best of this." He was a complete master of the English language and unquestionably the ablest writer that we had in all of the trade press in this country. We both feel we have lost a true friend. His personality was so genial, yet, withal, a "man" personified. Kindly accept for yourself and extend to all your associates our heartfelt sympathy for an irreparable loss. To his widow, whom we do not know, but judging from the dedication in his book, "The Heather," must have been a great help and inspiration to him, convey our heartfelt condolences.

Elmsford, N. Y., June 20, 1908. JAS. T. SCOTT (Scott Bros.)

I was shocked beyond expression to learn of the sudden death of Mr. Wallace. I always found him in very many respects a remarkable man, and from my old associations with you I can appreciate to some extent the severity of the blow to you.

New York, June 19, 1908. LEONARD BAYMON.

My sincerest sympathy. In Mr. Wallace we have lost a man whose place will be hard to fill. Words cannot express the shock, the news of his death created.

Waynesboro, Pa., June 20, 1908. HENRY EICHENTZ.

With great sorrow I have just read of Mr. Wallace's passing away so suddenly. It is a shock. I feel as if I have lost a personal friend. How my dear father would have grieved over it. To you, his close friend, and to his dear wife, I wish to send our heartfelt sympathy.

Chicago representative. JESSIE SANDERS VICTOR.
Chicago, Ill., June 20, 1908. (Daughter of Edgar Sanders, our late esteemed Chicago representative.)

I cannot express the shock I felt on learning of Mr. Wallace's death. His kindly, genial personality made him so many friends, and I was always strongly impressed by his many-sided knowledge, and the keen, incisive speech that made all his words impressive. Though we did not meet very often, I always felt that he was a friend rather than a business acquaintance, and one whose opinion was of value to me. Trade journalism will miss him greatly; indeed, it is hard to estimate how much we lose with him, and I can well imagine the sense of personal loss you must feel.

New York, June 22, 1908. E. T. ROYLE.

You have my sincere and heartfelt sympathy in this moment of your keen affliction. The death of Alexander Wallace is a great and irreparable loss, not only to yourself but to his numerous friends throughout the country as well. When I last saw him, about three weeks ago, little did I think that his life was drawing to a close. It is sad, very sad, indeed! But such is life with its uncertainties.

Philadelphia, June 22, 1908. S. S. SKIDELSKY.

Grieved to read of the death of Alexander Wallace, America, if not the world, has lost one of its brightest horticultural writers.

Natick, Mass., June 23, 1908. R. F. MCGORMAN.

It was with deep sorrow I read in *The Florists' Exchange* of last Saturday the notice of Mr. Wallace's death. It came as a great shock to me, as I had not the least idea he was ailing. He told me when I was in his office a few weeks back that he was suffering, but passed it off as hardly worth talking of; therefore, you can imagine my surprise and sorrow to read the notice of his death. I valued his friendship very highly and always looked forward to meeting him with a good deal of pleasure. I know how deeply you will feel the loss of such a true friend and co-worker, and the country at large lose in Mr. Wallace a man whose place will be indeed hard to fill. Believe me, you have my sympathy in your loss.

Washington, D. C., June 22, 1908. PETER BISSETT.

"In the midst of life we are in death." Words are not at my command to express my sorrow at the early severing of the life of Alexander Wallace. Known from the Atlantic to the Pacific, and from the Gulf to the Great Lakes, none will be missed so much at our annual meetings of the S. A. F. O. H. as Alexander Wallace, always at his post, honorable and fearless. But he is no more, and while I am writing these lines his body is being consigned to the tomb, earth to earth, ashes to ashes, dust to dust. An affectionate husband and, above all, a man.

Cincinnati, O., June 20, 1908. E. G. GILFILL.

The news of the death of Alexander Wallace was a terrible shock to me, for our relations since I had become associated with *The Florists' Exchange*, were of the most cordial and encouraging nature. My heart goes out to his wife; how she will miss him, and what numberless lonely hours she will spend, before Providence and Time, the great healers, have assuaged her grief. You, also, have my sympathy. His place can not be filled again in your life as it has been filled by him who has gone before, and Horticulture loses a staunch supporter and an earnest advocate.

Philadelphia, June 22, 1908. EDWIN LONSDALE.

In common with every reader of The Florists' Exchange, the writer was simply stunned by the sudden death of his good friend, Alexander Wallace—its editor. My pen hesitates as I try to say something equal to express my appreciation and gratitude for the many proofs of a real friendship so manifest for me for so many years by the deceased. We shall, indeed, miss our good friend more and more keenly as the days pass.

Brooklyn, N. Y., June 22, 1908. M. B. FAXON.

Alexander Wallace was a man I loved from the first time I met him, and my regard for him increased the more I saw of him. I had looked forward to enjoying his company again, from time to time, with much pleasure; and now our good friend is dead! To you and to others who have been closely associated with him I can understand how keenly his loss will be felt, and I sympathize with you greatly. You knew him and his worth.

Philadelphia, Pa., June 20, 1908.

Words fail me in the expression of my sorrow due to the death of Alexander Wallace. I feel that I have lost a most sincere friend and a true and sympathetic compatriot. The horticultural world, also, has lost an indefatigable worker and a diligent student. My deepest sympathy is extended to all whose daily lot it has been to come in close contact with him, and who will the more miss his kind and cheery personality, never demonstrative but always gilt-edged. His many friends in the West deplore with me his untimely demise.

Chicago, Ill., June 21, 1908. J. H. PEPPER.

It is with extreme regret that we announce the sudden death on Wednesday last in Brooklyn, N. Y., of that leal-hearted Scotsman, Mr. Alex. Wallace, editor of The Florists' Exchange, here, at the early age of 48 years, and for a long period one of our most esteemed contributors, his last article, on "James Wilson, Naturalist," appearing so recently as 27th May last. Mr. Wallace was well read in Scottish history and literature, had a fluent pen, and loved to dilate on the life and works of eminent Scotsmen; and for such articles his own columns did not form a fit medium. We were not sufficiently intimate with Mr. Wallace to learn how or when he adopted the profession of a journalist, but do not think he was bred to it, though like many more he by studious, steady application ultimately came to excel in it, and had for many years been connected with The Florists' Exchange. * * * He had a wide acquaintance with the florists throughout the United States and Canada, and by all was very highly esteemed. In 1903 Mr. Wallace wrote and published a book entitled, "The Heather in Lore, Lyric and Lay," which was at the time highly spoken of by the Press generally. He was also poetically inclined; and some specimens of his verse have appeared in our columns.

THE SCOTTISH AMERICAN.
New York, June 24, 1908.

I was more than stunned when I reached my office and found upon my desk your notice of the death of our dear friend, Alexander Wallace. I herewith wish to extend my deep sympathy to you and the trade in our loss through his death. He was a true friend to all whom he could help in our calling. Horticulture in the United States has, indeed, lost one of its best editors. He spared no effort to seek out the truth, and nothing was ever written by him when he was not sure of the ground he stood on. He was thorough in everything he undertook to do. We all know how hard he worked at the New York S. A. F. Convention, also at the Brooklyn Carnation Convention. He was called away when he was most able to give the benefit of his labor to horticultural interests throughout the world. He had all to live for, but it was not to be. I used to meet him often evenings at the different libraries in Brooklyn, remaining there until the lights were turned out; only then would he go home. It can truthfully be said of him he was faithful until death.

New York, June 23, 1908. ALFRED H. LANGFAHR.

I wish to express my sympathies to you in the loss of our esteemed friend, Mr. Alexander Wallace. I feel that in his death we have sustained not an ordinary loss, for his going makes a void that cannot be filled. It is true that some one will take up and carry on the work; but the personality of Alexander Wallace will be with us only in memory. And we revere the man for what he was.

ALEXANDER MACLELLAN.
Newport, R. I., June 22, 1908.

I am very sorry to learn of the death of Mr. Wallace, in the midst of a most useful life. His noble deeds will always live in the memory of his friends, the florists of America.

J. F. ANDERSON.
Short Hills, N. J., June 24, 1908.

The writer, who has often enjoyed the genial company of our friend, Alex. Wallace, is like hosts of others, stricken with grief to learn of his untimely death. The world loses so much when such a genial, faithful and ambitious man is taken from it. Many Indianapolis friends deeply realize their loss.

IRWIN BERTERMANN.
Indianapolis, Ind., June 22, 1908.

Seldom has the news of death so shocked me as that pertaining to the demise of Mr. Wallace; tho' I had not known him long it was my privilege to esteem him as a friend and an "honorable man" of the type which makes the world better and whose death creates a vacancy hard to fill. Unto you and his other business associates I extend my heartfelt sympathies.

JAS. L. CARBERY.
Washington, D. C., June 23, 1908.

I was indeed shocked at the death of our friend, Mr. Wallace, a man of whom you said very properly, "Few there are like unto him."

Mr. Wallace was known personally to many of the florists and gardeners in this vicinity and every one realizes the loss that not only The Florists' Exchange, but the press of the country has sustained.

JOHN W. DUNCAN.
Boston, Mass., June 22, 1908.

The William Scott Memorial Fund.

Substantial contributions to this fund continue to be received, and the lists having now been auspiciously opened, it is to be trusted that those who wish to contribute will do so as promptly as possible, in order that the undertaking may assume some definite and tangible shape. We would much like to see a good substantial list of names as contributors before the opening of the forthcoming convention of the S. A. F. at Niagara Falls in August, for, at that time, it would be most convenient for the subscribers to meet and discuss the shape they would like this memorial to take. Since our last issue we have received several cheques, including one for \$10 from The American Carnation Society, and one of \$5 from Henry Eichholz, Waynesboro, Pa., who says: "I herewith forward you my check for \$5, to be added to the Scott Memorial Fund. No man in the trade has done more good to the craft than he."

Editor The Florists' Exchange:

Enclosed please find check for \$5.00, our contribution toward the William Scott Monument Fund. The object is a worthy one and it is our sincere hope that the craft will honor itself by paying tribute to the memory of the man who did so much for the interests of horticulture in America.

Utica, N. Y. C. F. BAKER & SON.

I take pleasure in contributing one dollar toward the William Scott Monument Fund, hoping that every florist throughout the land may follow my example and that the fund, ere long, may assume generous proportions.

Utica, N. Y. W. A. ROWLANDS.

Editor Florists' Exchange:

I have read with deep interest the article signed "S" in your issue of May 23, and am very much taken up with the idea.

Why not erect a suitable monument to the memory of Wm. Scott, in appreciation of the services he has rendered to horticulture in general, and as a mark of the esteem in which he was held by the florists throughout these United States and Canada? Such a tribute would stand as a lasting token and corresponding valuation from a horticultural community to one of its benefactors.

St. Louis, Mo. OTTO G. KOENIG.

The subscriptions received to date, and all further donations, will be deposited with the Carnegie Trust Company, 115 Broadway, New York City, in the name of the Scott Memorial Fund. Here the deposits will receive 3 per cent. interest.

Subscriptions to Thursday, June 25:

J. McHutchison, 17 Murray St., New York	\$10.00
John Birnie, West Hoboken, N. J.	5.00
S. S. Skidelsky, 1731 No. 18th St., Philadelphia, Pa.	5.00
The American Carnation Society	10.00
Henry Eichholz, Waynesboro, Pa.	5.00
C. F. Baker & Son, Utica, N. Y.	5.00
W. A. Rowlands, Utica, N. Y.	1.00
H. N. Hoffman, Elmira, N. Y.	1.00

Proposed Law Affecting Insecticides.

On Thursday, June 18, an all-day session was held in the American Institute Building, West 44th street, New York City, between manufacturers, representatives of the entomologists, and some of the leading chemists connected with the State control of the insecticide laws, for the discussion of Senate bill 6515 and House of Representatives bill 21316, entitled "A bill for preventing the manufacture, sale or importation of adulterated or misbranded fungicides, paris greens, lead arsenates and other insecticides, and for regulating traffic therein and for other purposes." There were about forty persons present.

The Senate bill and the House of Representatives bill are the same, excepting that in section 7, there is a fourth clause added to the House of Representatives bill which was amended. Section by section was taken up. The bill appears to be promulgated by those connected with the Agricultural Department.

The first section provides that any violation is a misdemeanor, punishable by a fine not to exceed \$500 or one year's imprisonment, or both, and if brought up on a second count, the fine is doubled, with the imprisonment clause in the discretion of the court. This section was adopted. Sections 2 and 4, the same.

Section 4, which provides for the examination of specimens of fungicides, paris greens, lead arsenates and other insecticides, called for discussion looking for enlightenment. Under this section a motion was made to insert the word "willfully" ("willfully violated"), but the entomologists and representatives of the Department voted against that.

In dealing with section 5, a discussion arose as to who should have the authority to start prosecutions, and a clause reading, "Under authority of the Secretary of Agriculture" was inserted, so as to make it plain that in the National bill there was some head to its enforcement and that the initiative should not be left to any director of experiment stations or agent of any State, or the District of Columbia.

Sections 6 and 7 caused the most discussion. The intent of the promoters of the bill seems to be to concentrate unquestioned authority of oversight in the hands of the Department of Agriculture, and the manufacturers brought up various questions, all of which were fairly and frankly considered.

In section 6, the words "man or other animals" were stricken out, so as to confine the section to its legitimate purpose, that affecting insecticides used upon vegetation. There was also a definition added—that the term "miscible oils" shall include all preparations of petroleum to be used in water. In section 7, after some discussion in which the actual work of the manufacturing chemist is compared with the laboratory chemists' small tests, the amount of arsenious oxide, As₂O₃, was made 50 per cent. instead of 55 per cent. The standard of lead arsenates is one of the things which are indefinite. There is a variation in the actual working of these things, from the commercial basis where they are sent out literally by the tons. To make a commercial article match a chemically pure preparation for a special test, the quantity of water permissible, the actual working conditions of transportation, the evaporation of water by a leaky package—that is to say, the real "work-a-day" conditions, which all commercial articles are subject to—were talked over, and the result was apparently some enlightenment, with the expression of opinion by the professional entomologists that there was no wish to put into the bill anything which could in any way hamper far trade.

The fourth division of the House bill, which reads, "Any article which is intended for use on vegetation and shall contain any substance or substances, which although destroying, repelling or mitigating insects, shall be injurious to such vegetation." This clause, which is not in the Senate bill, was taken up, as it is a trap which might be used to the great annoyance and harm of any one, for there are no substances commonly employed but what, if a small over-dose is used, will destroy vegetation, and as the paragraph read there was no explanation to its construction. To qualify this paragraph the sentence, "By following the directions expressed upon the package," was added, and, thus adopted, section was adopted.

A question arose in regard to selling in foreign countries; that while the consular service of the United States was endeavoring to increase foreign trade, the demands of foreigners, which may call for something entirely different from what is used in this country, should not in any way be restricted.

A motion was made and carried that the bill as amended according to the secretary's notes be adopted, and the same was carried.

A resolution was offered on the part of the manufacturers to the effect that the gentlemen in charge of this meeting, Mr. E. Dwight Sanderson of Durham, N. H., and Prof. Smith of New Brunswick, N. J., be thanked for inviting them to be present.

Low Prices on Production of High-Grade Stocks.

At the meeting of the American Seed Trade Ass'n. C. N. Keeney, of N. B. Keeney & Son, Le Roy, N. Y., read the following paper: Regarding the effect of low prices on the production of high-grade seed stocks, we have simply to refer to a little recent history. Fifteen to twenty years ago a poor stock of Alaska peas was as rare as a good stock of the same variety is now. Up to that time prices had been good. There was money in Alaskas for the farmer, for the seed grower, for the seedsmen and for the planter, but over-production resulted in low prices and low prices caused a lack of interest and a relaxing of that eternal vigilance which is the price of success in producing a good stock or in keeping it good.

The threshing machines used in threshing Alaskas were also used in threshing Blue Imperials, Wisconsin Blues and other field varieties, and whenever a threshing machine changes from one variety to another, it is pretty certain to carry a few quarts of peas in the machine and add them to the next crop threshed. In this manner, Wisconsin Blues were frequently mixed with Alaskas and where extreme care was not exercised to take these out, regardless of cost, the stocks became mixed and a bad matter became worse through hybridization. This extreme care was not exercised because the majority of buyers looked only at the price and would not pay the extra cost of keeping stock pure and true. The fluctuation in supply and demand occasionally made seedsmen and sometimes growers eager purchasers and before anyone was really aware of it, these inferior stocks which gained a foothold during the low prices and the reign of indifference, permeated nearly all the stocks in the country and for the last five or ten years it has been pretty nearly impossible to find any Alaska stocks that were right. This unfortunate condition of things is clearly traceable to the period during which garden peas were sold at field pea prices. Fortunately, the conditions were so very bad as to force a reaction and a few people have been doing some very careful and efficient work in restoring Alaskas to their original purity and we are likely to have much more satisfactory stocks of this important variety in the near future. Let us hope that we may be spared from the misfortune of such low prices as may result in again demoralizing Alaska stocks. The asking of high prices does not necessarily prove the purity of the stock, but one thing is certain: the long-continued prevalence of prices at or below the costline is certain to result in inferior stocks.

Of all varieties of peas known to the seed trade, there is probably not one that excels in fine quality and delicious flavor the old Stratagem; but the Stratagem is a bad sporter and if neglected even for a single season, it suffers from rapid degeneration. The man who sells Stratagem peas at anything less than a high price, sells them at an actual loss if he devotes to them the time and skill necessary to keep the stock right. The eagerness to compete in the matter of price has resulted in selling to the general public such inferior stocks of Stratagem as to give the planters the impression that Stratagems are really a poor variety, while they are certainly one of the three or four "top notchers" in the entire list of peas. So-called Stratagem peas have been sold at competitive prices, which actually do not contain five per cent. of true Stratagems. The planter, because he didn't like the Stratagem sports, dropped the variety and now very many seedsmen do not attempt to handle the seed at all. There are a few seedsmen, however, who have never handled cheap Stratagems and when they could not furnish the real thing, would not attempt to furnish any, the result being that these houses have a steadily increasing demand for Stratagems and are building up a profitable trade in this excellent variety.

The experience in the case of Alaska and Stratagem peas has been duplicated in many other varieties of seeds. Take, for instance, Red Valentine beans: a dozen years or more ago one of our bean growers made a standing offer of twenty-five cents a plant for every flat-podded plant of Red Valentines which his customers could find in his fields, but the depression in the garden bean market which followed the large crops of 1896 and 1897 left no margin for growers to use in keeping their stocks up to standard and even that fine strain of Red Valentines fell from grace through the hybridization carried on by bees and the grower's offer had to be withdrawn. Fortunately, however, there are quite a few seedsmen who appreciate the difference between stocks that are fair and stocks that are fine, and are willing to pay a reasonable difference in favor of fine stocks. This fact has encouraged the grower referred to, to renew his efforts in producing a pure strain of Red Valentine that is all round-podded, and we understand the old offer of twenty-five cents a plant for every flat-podded plant found in this strain of Red Valentines has been renewed. It is, however, safe to assume that the work of restoring this very important variety to its best possible condition would not have been undertaken if all seedsmen were like the few who consider the price only.

An Octogenarian Nurseryman.

John William Adams of Springfield, Mass., whose reputation as a nurseryman has extended far beyond the confines of New England, on the 20th inst. celebrated his eightieth birthday. The members of his immediate family, including children and grandchildren, 12 in all, took dinner with him on the day at his pleasant home at the corner of Chestnut and Dover streets, in observance of the passage of the 80th milestone. Time has certainly dealt kindly with Mr. Adams and he appreciates it. He is active and alert, mentally and physically, and might easily pass for a man 20 years younger.

Mr. Adams was born in Stratham, N. H., June 20, 1828, being the youngest of the six children of Rev. John F. and Mary Lane Adams, grandson of Lieut. John Adams of the Revolutionary Army and great-grandson of Rev. Joseph Adams, who founded the church in Newburyport where George Whitfield was buried. For 50 years he has conducted the business of a nurseryman, getting his start when a boy of 16 by reading some works on horticulture. With the aid of his father he developed a small nursery in his New Hampshire home and the experience thus obtained proved most valuable in the years that followed, when he engaged in the business for himself. Now he has 13 acres under cultivation at the North end, in the vicinity of Dover and Chestnut streets, with large greenhouses in connection.

Concerning the nursery business Mr. Adams says that New England is the natural home of forest growth. The trees are as large here at two years as they are at three in Geneva, N. Y., the great nursery center.

The greenhouses are considered a side line in the nursery business and are established mainly to provide winter employment for the expert gardeners. Several glasshouses modernly equipped are included in Mr. Adams's big plantation. Mr. Adams is always generous with advice concerning proper methods for setting and caring for plants.

Mr. Adams married Miss Sarah Frances Waterhouse at Portland, Me., September 5, 1865, and they had six children, four sons and two daughters. Two of the sons died early in life. Walter Adams and Charles Adams are associated with their father in the nursery business. The two daughters, Mrs. Oatman and Miss Nellie Adams, are also members of the firm of J. W. Adams & Co., and all the children excepting Mrs. Oatman take an active interest in the operations of the business.

Mr. Adams is a member of Greenleaf Chapter of Masons of Portland, Me., of the Society of Cincinnati, Trinity Methodist Church, the Hampden Harvest Club, and of several local and national horticultural societies.

EXHIBITIONS THIS WEEK

PENNSYLVANIA HORTICULTURAL SOCIETY.—An interesting sweet pea and outdoor cut flower exhibition was held under the auspices of this society on Tuesday afternoon and evening, June 23. In the sweet pea classes, Mr. Rudolph Ellis (gardener, Samuel Hammond), captured seven first prizes, as follows: Best six vases, six varieties, 25 sprays each of Dree's orchid-flowering varieties; best 15 vases containing 15 varieties, 25 sprays each of Dree's "Incomparable Collection"; 50 blooms Countess Spencer, pink, and 50 blooms Frank Dolby, pale

lavender; one vase of Mitchell's Magnificent in one foot 12 bunches to consist of 50 sprays, 12 of fine varieties, and best three vases 25 sprays each of Glad Flowers. That is quite a commendable record for Mr. Hammond. He said he cut the flowers that he exhibited on the evening of Monday. The day before the show, and they came through all right.

First for Japanese iris, best collection of not less than 12 varieties, was awarded to Mr. James W. Paul, Jr.'s, gardener, Joseph Hurley. First for hardy herbaceous perennials went to a fine collection, exhibited by the gardener to Mr. Clement E. Newbold, Samuel Batchelor. Conspicuous in the collection were that useful phlox, White Swan, hybrid delphiniums, in various blue shades, the yellow Anthemis Kelyayi, the orange-colored Heliopsis Pitecherii, besides many others. The gardener to Mr. James W. Paul, Jr., Joseph Hurley, was awarded second prize. This was a very useful and meritorious collection of hardy herbaceous perennials, but, unfortunately, it lacked one very essential feature for exhibition purposes — not a label was to be found anywhere in connection therewith.

For outdoor cut flowers, best collection of 12 species (not varieties), first was deservedly awarded to a well-put-up collection by the gardener to Mr. John W. Pepper, William Robertson; second to Mr. Clement E. Newbold, gardener, Samuel Batchelor. William Robertson had a walk-over for a pair of well-grown gloxinias, one of which was a rich dark purple in color. Taking the show altogether, it was most creditable. A vase of the Tea rose, Bessy Brown, exhibited great merit as an outdoor rose. Mme. Caroline Testont was also fine, and Killburney and Gruss an Teplitz indicated what useful outdoor roses they are. The rich coloring of the annual salpiglossis

NEWPORT (R. I.) HORTICULTURAL SOCIETY. The tenth annual rose and strawberry show of this society was held at Masonic Hall, June 23 and 24, and was noticeable for the very excellent quality of the exhibits of plants and cut flowers. Fruit was a small exhibit, but what was shown was of fine quality. The vegetable display was also good. The judges were: Bruce Butterton, Paul Volquardson and John Baumgardner.

Only one large group of foliage and flowering plants was put up; others who had entered but failed to stage were prevented because of a rush of work. The flowering plants in the group staged were principally anthuriums, Campanula media and marguerites. Mrs. Robert Golet (Colin Robertson, gardener) received first prize for this exhibit and was also first in Class 2, for the best table of decorative foliage plants; first in palms for arca and for kentia in 12-inch pots; first for best palm, size of pot not limited; first in cut flowers, for display of outdoor roses, tastefully arranged, on a table 6 feet x 3 feet; first for vase of 12 H. P. roses (white), the variety being Frau Karl Druschki, and first for vase of 12 blooms of H. P. roses, any variety.

Mrs. T. O. Richardson (James Robertson, gardener) was first for best collection of outdoor roses, named varieties, exhibited by Newport County gardeners; first for the best 12 H. P. roses, 12 varieties, in bottles — the winning flowers, all standard sorts, being Mrs. S. G. Sharman-Crawford, Frau Karl Druschki, Gabriel Luizet, Margaret Dickson, Marchioness of Londonderry, Dupuy, Jamain, Monsieur Bonneville, Captain Hayward, Tom Wood, Mrs. John Laing and Clio. She was also first for the best vase of 25 H. P. roses, outdoor group.

Hugh D. Anchinloss (John Mahan, gardener) was first for specimen fern, for collection of hardy herbaceous flowers, for dish of Marshall strawberries and for brace of cucumbers. Mrs. William Astor (James Boyd, gardener) was first for tomatoes and several other prizes. Miss E. B. Fay, Woods Hole, Mass. (M. P. Walsh, gardener), showed some fine blooms of excellent quality, which were awarded a gratuity. For a fancy basket of roses, F. L. Wiegler was first, and Oscar Schultz second. With fruit, James McLoish was first for bunch of black grapes, bunch of white grapes, and for dish of nectarines. Prof. W. B. Green (Samuel Spear, gardener) was first for best collection of strawberries, and second for collection of vegetables.

Mrs. Wm. G. Weld was awarded the society's silver medal for display of crested, or frilled, tuberous begonias, and for a general display a table of gloxinias edged with thumbergia, gratuity; Joseph Leikens, for large specimen kentia, gratuity; Alexander MacLellan, for display vases of delphinium and digitalis, gratuity; John Mahan, for nymphs, Campanula media and collections of annuals, gratuity; W. Scott Sisson, for cactus, gratuity; William J. Watson, for cosmos, Lady Lennox, certificate of merit; William G. Postny, for sweet peas, Sutton's Queen, bronze medal, and new delphiniums, certificate of merit. A. MacL.

Frank C. Goble.

Frank C. Goble, wholesale grower of plants and cut flowers, Verona, N. J., died suddenly on Monday, June 22, from apoplexy. The funeral was held from his late home Thursday afternoon.

Emanuel Hippard.

At the age of 63 years, Emanuel Hippard died from paralysis on June 16 at his home, 103 West Rayen avenue, Youngstown, O. Six weeks ago, while returning from a trip to Cuba, he was stricken in Jacksonville, Fla. He was removed to his home a short time later in a serious condition, from which he never rallied.

Deceased was born in Elizabethtown, Pa., August 6, 1845. He was married to Miss Catherine Auchenbach, November 4, 1866. For three years Mr. Hippard served in the navy of the United States on board the man-of-war, Wachussett. During the last years of the Civil War he saw service in Co. 20, Pennsylvania cavalry. After the close of the war he was connected with the Pennsylvania R. R., in the capacity of fireman and engineer, until 1876, running between Philadelphia and Harrisburg, Pa. In February, 1882, he settled in Youngstown, beginning a business career which marked him as a man of ability in many lines. He purchased the farm where the greenhouses of John Walker are now located. These greenhouses were built by Mr. Hippard and conducted by him until a few years ago when he disposed of them to Mr. Walker. A short time after establishing the plant at Crab Creek he opened in Federal street, in the room now occupied by the Templin Co., a second flower store. This was operated by Mr. Hippard for some time.

Mr. Hippard patented and manufactured the Standard ventilator, which is so familiar to the trade; also the Duplex gutter, miles of which are in use to-day; and last of all he perfected the Standard steam trap, which is one of the best in use. The manufacture and sale of the ventilators, gutter and trap will be continued under the old name by his grandson, R. H. Little, who has had considerable experience in the shop with the deceased. Mr. Hippard has for years been a member of the Society of American Florists and American Carnation Society and a regular exhibitor at their conventions.

In his business relations Mr. Hippard was always a man of honor and was highly regarded. He was prominent in many business enterprises besides those mentioned. The local lodge of Elks numbered him among its members. In this order he was the Second Exalted Ruler of Youngstown lodge. He was also connected with the grand lodge and was one of the oldest members of the order in the city. He was a member of Tod Post, No. 29, G. A. R.

Mr. Hippard is survived by his wife and one daughter. The latter is Mrs. C. J. Little of Youngstown.

The funeral was held June 18 from the residence, with interment in Oak Hill cemetery. There was a large attendance of friends, and a great number of floral tokens of sympathy attested the general esteem in which the deceased was held by all who knew him.

The Tariff on Greenhouse Materials. Petition for Reduction.

Appended is a petition in the form of a letter which John C. Moninger Company of Chicago have filed with the Western Classification Committee for a reduction of the tariff on greenhouse materials. This will be of especial interest to our Western friends, and we are assured that the authors of the petition mean to carry the matter through to the end. The new rate would mean a great saving to all of the Western florists, and would act as a stimulus to the trade in general.

Mr. F. O. Becker, Chairman Western Classification Committee, Great Northern Bldg., Chicago, Ill.

DEAR SIR:—In making shipments of our goods throughout the West we are having considerable trouble owing to the fact that there is no way of shipping mixed carloads of what we term greenhouse material. We are shut out of a great field due to the fact that we cannot ship mixed carloads on a sufficiently low rate to get the business or to make it interesting for the prospective buyer of our class of goods. We respectfully request that you give us a fifth-class rating on carloads of our material and pursuant to our application for a fifth-class rating on what we term greenhouse material in carloads, would state that the average carload of this material or commodity would be made up as follows: Common pine lumber, 10,000 lbs. (fourth-class

L. C. L.); common pine mouldings, 1,000 lbs. (third-class L. C. L.); common unglazed sash, 1,000 lbs. (second-class L. C. L.); iron castings (rough), 1,500 lbs. (fourth-class L. C. L.); iron pipe (wrought), 1,000 lbs. (fourth-class L. C. L.); common window glass (small), 10,000 lbs. (fourth-class L. C. L.); putty, 500 lbs. (fourth-class L. C. L.); average weight of car, 25,000 to 30,000 lbs.

In many instances we can, by the application of the carload lumber rate, plus one cent per 100 lbs. for articles taking higher than lumber rate, and the application of the fourth-class L. C. L. rate on balance of the items enumerated above, making a lower rate than would be assessed on a fifth-class rate on the entire consignment, figured on a basis of a minimum weight of 30,000 lbs. for the car. However, it would be possible to do this, and these conditions would obtain, to only such nearby points as have a comparatively low rate on lumber, say seven or eight-cent rate.

To points on Western trunk line territory, and to points west of this territory, we have found by experience where we have been obliged in making up carloads to apply the L. C. L. rates of second-class on the common unglazed sash, the L. C. L. rates of third-class on the common pine mouldings and the L. C. L. fourth-class rates on balance of the list, that it makes shipping prohibitory, resulting very frequently in loss of sales

The Late Emanuel Hippard.

by us and loss of revenue by the transportation lines. To all these points we cannot successfully ship and compete with local dealers and the result follows that the man who is going to put up greenhouses builds them with locally improvised materials on which interested lines did not get a revenue or handle as freight. Far Western points cannot be reached as they use cedar, fir and other local woods for the houses, having the material made by local planing mills, whereas with a fifth-class rate we could get the business. Our class of goods are the goods that the greenhouse man wants for his houses, and were it not for the excessive freight charges he would buy them rather than put up something inferior in construction and in quality of materials used. A fifth-class rating on greenhouse materials would result in increased tonnage for the railroad lines and would tend to educate the people in the territory mentioned toward buying goods in this market. It would lessen their independence on local industries that are not equipped to furnish the goods that a man wants, but which he is forced to buy on account of the excessive tariff on this class of goods. The application of a fifth-class rate would enlarge our business along with the business of several other firms in this market who are making and selling the same class of material as mentioned in this letter.

Reference to classification No. 44 shows that in a number of instances mixed carloads made up for the benefit of dealers in a particular and special line of business are permitted; notably among them are creamery supplies, cooling room material and machinery,

which by the way is much higher grade of freight than the class of goods which we are shipping. Creamery supplies, cooling room materials and machinery, while a higher grade of freight, can be shipped at a lower carload minimum weight than we request you to establish on our greenhouse materials.

We would further point out that under the Illinois and Official classifications we are enabled to ship mixed carloads at the carload rate and at the highest minimum for any article contained therein. We give here two special cases where shipments were made and these will show at a glance the difference between shipping as mentioned in the first part of this letter and shipping under the official classification.

A carload of material made up as follows is to be shipped to Denver, Colo.:

Lumber	10,000 lbs.	\$0.97 rate
Moulding	3,000 "	1.25 "
Sash	600 "	1.25 "
Castings	950 "	.97 "
Glass	10,500 "	.97 "
Putty	500 "	.97 "
Pipe	1,250 "	.97 "

With these rates it is almost impossible for us to get much Denver business, but if we had the fifth-class rates on the carload we could send it at 77 cents and get the business. This would save the consignee 20 cents per 100 lbs., you would get the haul and the revenue and we would increase our sales.

Take the same car to Columbus, Ohio, and we could ship it on a 15-cent rate on the basis of a 30,000-lb. minimum.

We respectfully request that you consider our petition for a fifth-class rating on greenhouse materials.

Thanking you in advance for any courtesies, we are,

Yours very truly,

June 19, 1908.

JOHN C. MONINGER CO.

A Test of Peonies.

What we want is plants that will stand everything without being discouraged—those that will be prolific and sure bloomers. We had the most remarkable Spring on record. April and May eluded places and the mischief was to pay. Warm days brought out the buds and it seemed as if we would have flowers in a few days. Then, early in May, we had a succession, not of frosts but of freezes which froze the ground. It was a fearful test. Then came mild days to encourage them. Many recovered and we thought they would be all right. A bitter cruel freeze next sneaked in and caught everything unawares and we asked, "Can any living thing endure this?" Our old favorites gave it up. Of 1000 Festiva maxima, not a dozen decent blooms. The faithful L'Esperance, our dependence for Decoration Day, gave up the struggle. Calls poured in, but most of the peonies were nipped in the bud. Yet there were some that just gloried in tribulation and paid no attention whatever to little trials like those. Golden Harvest maintained her never-fail reputation and ought to stand away at the front—hardy everywhere in Manitoba and the Dakotas. The plants were covered with flowers of exquisite beauty. They need but a strong and long stem to stamp them as perfect. Charles Verdier was a glory of bloom. Faust, M. Jules Elie, Sarah Bernhardt, and Louis Van Houtel answered the roll call promptly. I was surprised at the vigor of the M. Duponts. They were by far the best and grandest of the whites—splendid solid hemispheres, seven inches across; centers flecked with carmine, so distinctly marked you could not mistake them. La Sublime literally deluged the plants with crimson beauty. Couronne d'Or never did better. Baroness Schroeder sent out a flower for every stem. One thousand Queen Victorias, usually so hardy, gave up in disgust; not a decent flower on the whole mass. Rosenfield's Triumphs, bred for hardiness and beauty, carefully selected out of thousands, and blooming qualities carefully noted for years before putting them on the market, were on hand promptly. Karl Rosenfield, the ideal crimson and the finest among 700, was all right, arrayed in royal splendor. Ak-sar-ben, brilliant crimson maroon; Grace D. Bryan, splendid large pink; Crimson Victory, radiant in loveliness; Prairie Splendor, with delicious perfume and magnificent bloom, seven inches across, with Prairie King with full globe of brilliant soft violaceous red, all sustained the test. These are very robust, the stems are from 40 to 55 inches tall; just what we have been looking for to endure the trying climate of the West. Jeanne D'Arc and Golden Harvest: As these bloomed this year, it was hard to tell the difference in the flowers. The former is probably the mother of the latter. There is this difference, a row of Jeanne D'Arc planted last Fall did not produce a flower. A row of Golden Harvest planted the same time was covered with bloom.

York, Neb.

C. S. HARRISON.

OUR READERS' VIEWS

Greenhouse Construction.

Editor Florists' Exchange:

There have appeared in the several trade papers at different times, articles on greenhouse construction, and in order to bring out the views of men of experience, we have prepared the following questions and will ask you if you will kindly give same space in your valuable paper.

VALENTIN BURGAIN'S SONS,

Kingston, N. Y.

THE HYPOTHETICAL QUESTION.

We find ourselves decidedly mixed, Mr. Editor, on the various widths and treatment of greenhouses in their construction. Before putting up another house we have decided to go slow and get the point of view of the large growers, and, if possible, profit by their experience. Their points of view are apparently so conflicting that we come to you as the court of last appeal. Will you kindly try to clear away the problem on the following points?

Mr. Alexander Montgomery claims that in their 40 feet wide and 700 feet long house there is absolutely no difference in light values on any of the benches, and the temperature and ventilation, both day and night, are under more perfect control than in any other house on the place, and that he is convinced that this house is much superior to eight small houses it would require to cover the same amount of ground space.

On top of this, Horticulture publishes an interview with Mr. Robert Simpson, in which his view is at variance. He states that 30 feet is the best width and that he feels in the wide house the center benches are not so productive.

Mr. John Young states that he has trouble in controlling the drafts in his 55-foot wide house.

On the other hand, Mr. Fred Burki, who also has a wide house, says that he has no trouble whatever with drafts, and cannot understand why there should be. We understand that Mr. Burki also claims that he is building iron frame houses now at very little increase in approximate expense over the wooden houses, which he erected in the nineties, and that wide houses are very much cheaper to erect than smaller houses covering the same ground space.

Then, to apparently knock this statement "galylest," Mr. Elliott, in his address before the Rose Society at Chicago, states that the wide houses are more expensive than the narrow, because they demand a additional frame strengthening.

Now, what is a fellow to do? Who is right? What of the shadeless ridge house?

[We gladly print the above, and it will afford us pleasure to publish correspondence from any of our readers who may desire to express their views on the interesting points raised in the "hypothetical question."—Ed. F. E.]

Mildew on Rose Killarney.

Editor The Florists' Exchange:

For some unaccountable reason the most important part of the quotation appearing in June 13 issue, page 890, about the White Killarney, was left out. I refer to what was taken from London Gardening, Illustrated, the closing sentence of which read: "It is a good variety for outdoors, the only fault one can find with it being its susceptibility to mildew." Here is what was omitted: "Under glass we have this fungus more under control—in fact, Killarney grows as clean as any other Hybrid Tea when forced." Exactly so. That practical talk agrees with my own experience with Killarney and any other variety of rose that is prone to mildew. The notion prevailing in some quarters that if we would escape mildew we must propagate the Killarney rose only from outdoor grown stock is all wrong. And that is the only reason exceptions were taken to what was said in your esteemed contemporary, Horticulture, a few weeks ago, and, it now appears in a more recent issue of the same paper, that the statement was made by Geo. C. Watson. There is no doubt at all that Mr. Watson

has been imposed upon, that he has been misinformed, and that he will find that the least he has to say in defence of his statement, the sooner will it be mended.

Allow me to quote from John N. May, a rose growing expert recognized the world over for his knowledge on the points at issue. "Regarding Killarney, I cannot say definitely whether plants propagated from stock grown in the open air in this country would be proof against mildew or not, but I presume most of the imported plants of this variety are propagated from stock growing in the open air and these, from my experience, are as much subject to mildew as any others such as we propagate in the usual way from stock growing in the greenhouses. The first of these I imported were grown as carefully as we know how to prevent mildew and other pests to which nearly all roses are subject, but they got a bad dose of mildew as soon as the dull weather set in in the Fall, and before we could keep steady fire heat and, of course, having once gotten on to the foliage, they were subject to new attacks of it whenever the atmospheric conditions were favorable for its development. This variety seems to be very subject to take mildew under conditions favorable for its development as much so as any Tea Rose or Hybrid Tea with which I am acquainted. That it can be grown free from it, if carefully handled, there is no question, but it requires good treatment to do so."

And here is what W. H. Elliott has to say, a grower whose triumphs with this deservedly popular rose is of such recent date that they need not be repeated at this time. "In regard to Killarney, would say I propagate my stock from plants grown

everywhere propagated from any healthy stock. If anyone doubts it let him come and see my stock, which has never seen outdoors excepting through glass."

These are plain, unvarnished facts, and the promulgation of some is our ideal of horticultural journalism. EDWIN LONSBARE.

PROVIDENCE. The Florists and Gardeners' Club conducted a meeting and entertainment at the Rhode Island hospital Wednesday evening, June 17. This entertainment was held through the courtesy of Dr. Peters, the superintendent of the hospital, and Mr. Hestifer, the gardener. The evening was passed in banqueting and speechmaking, which all greatly enjoyed. G. A. J.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Cods.

Albany, N. Y.

EYRES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

JACOB SCRULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

June Bridal Bouquets.

Designed by Palmer's, Buffalo, N. Y.

indoors and grow both grafted and own root stock and find very little difference. They are grafted on monetti stocks. Have used plants for two years and find they do just as well the second year. I grow them both on the solid bed and on benches and think for the first year would prefer the benches. They are grown in same temperature as Bride and Bridesmaid. The soil is fairly heavy and clayey."

Listen to what Benjamin Dorrance has to say about Killarney. It should be borne in mind that Mr. Dorrance is responsible for rescuing Killarney from possible oblivion, as against the judgment of many who had tried it and discarded it, presumably because it was too near to outdoor grown stock: "As to the advantage," says Mr. Dorrance, "of growing Killarney from outdoor grown stock, I cannot say since we have never tried this method to any extent. I presume, in the hands of a good grower, the product would be free from mildew, so long as proper care is given outdoor grown stock. On the other hand, from experience, limited, it is true, with indoor propagation, we find no trouble with mildew on Killarney when proper care is used; in fact, with us, it is the easiest of all roses to grow free from disease, or fungus. I would not presume to set up my limited knowledge in opposition to the world-wide source you quote, but just a word, Killarney only needs a grower to be a suc-

CLASSIFIED ADVERTISEMENTS

Cash with order.

The columns under this heading are reserved for advertisements of Stock for Sale, Stock Wanted, Help Wanted, Situations Wanted or other Wants; also of Greenhouse, Land, Second-Hand Materials, etc., For Sale or Rent.

Our charge is 10 cts. per line (7 words to the line), set sold, without display. No advt. accepted for less than thirty cents. Display advertisements, in these columns, 16 cents per line; count 12 lines agate to the inch.

[If replies to Help Wanted, Situation Wanted, or other advertisements are to be addressed care of this office, advertisers add 10 cents to cover expense of forwarding.] Copy must reach New York office 12 o'clock Wednesday to secure insertion in issue of following Saturday. Advertisers in the Western States desiring to advertise under initials may save time by having their answers directed care our Chicago office at 4643 Cottage Grove avenue.

SITUATIONS WANTED

SITUATION WANTED—By American, 30 years of age, married, as foreman of first-class plant; roses, carnations, etc. Address, B. S., care The Florists' Exchange.

SITUATION WANTED—By experienced greenhouse man and gardener, 35, single, good, willing worker. Address, care A. Feiger, 108 Woodward avenue, Brooklyn, N. Y.

FOR SALE OR RENT

The florist business of Chas. Schuck & Brother. This is one of the best paying establishments in Philadelphia. The plant consists of eight greenhouses, steam heated store, dwelling and stable. Established twenty-five years. References to this business can be had from any florist or seed house in Philadelphia.

CHAS. SCHUCK & BROTHER,
2441 to 2457 N. Eighth St.,
PHILADELPHIA, PA.

FOR SALE—A first-class florist's business, consisting of thirteen greenhouses, containing 25,000 square feet of glass; brated in the best section of the city of Rome, N. Y. The city portion consists of land, 240x320 feet, and, in addition to this, there are about three acres for growing purposes, less than one-third of a mile from the city location. The greenhouses are new and strictly up to date. On the premises there is a new and modern fourteen-roomed dwelling house, with all improvements, and large stable. The plant contains two tubular boilers of 150 horsepower. This entire plant has been built within the past eight years and is in the pink of condition. Books open for inspection; for the past five years has paid upwards of 15 per cent. per annum on amount asked. Examination of this plant, which is one of the best equipped in Central New York, is solicited. For a bird's-eye view of the plant see The Florists' Exchange, issue of May 23, 1908. Best of reasons for selling. For price and terms address E. J. Byam, Rome, N. Y.

THE CHRYSANTHEMUM

By A. Herrington

A complete and comprehensive work on the cultivation of the Chrysanthemum. Handomely illustrated, 168 pages, 6 x 7 inches. Price only 50 cents, postpaid.

Cultural Directions

Are leaflets written by practical men especially for the use of amateur customers.

If you have a counter trade, either in plants, seeds, flowers or bulbs, you should have a supply of these leaflets on hand to present to your customers when they seek cultural information about their purchases.

(The leaflets embrace over forty subjects.)

We can supply them at \$2.50 per 1000, or 600 for \$1.50, and can make a reduction of those prices on large quantities.

At a small extra cost we can put your imprint on each leaflet.

Try a thousand and see what a help they are in selling goods.

P. O. Box 1697 - NEW YORK

REVIEW OF THE MARKET

NEW YORK. The weather has been really too warm for the good of the flowers coming in this week. There has been a little better demand for high-grade stock than has been the rule for several weeks. Good white roses, white carnations, or, in fact, anything white, has been easier to dispose of. For some of the Bride roses 6c. was obtainable at times, and for good white carnations 2c. has been possible. These prices do not seem high, yet they are quite an improvement over what has been obtainable for several weeks past. American Beauty roses also, when good, have fetched a higher value, some of the best going as high as 15c. each. There is a lot of stock coming in, however, of both roses and carnations, that does not begin to be in the first-class grade, and for such there has been no better price than was quoted one week ago. Sweet peas are coming in very heavily, and 35c. per dozen bunches is considered a good price for really good stock. Cattleyas are still plentiful, and, while there has been a little better call for them for the last five or six days, it cannot be said that the demand has been such as to warrant the dealers putting up the prices to where they have usually been at this time of the year. There are still a few good peonies around, and, owing to their scarcity, a much better price is being realized than was possible during the glut. Pond lilies and candidum lilies are very much in evidence this week, though there does not seem to be much demand for either of them. The same also applies to Harrisii lilies; there are plenty on hand, with but little call for them. Gardenias are still in regular supply, as also are gladiolus. Of the outdoor flowers, perennial phlox and pyrethrum are coming in in fairly large quantities. There is little business doing in the green line, such as maidenhair fern, asparagus and smilax; outdoor foliage, seemingly, is more in demand just now.

PHILADELPHIA.—There is very little local business being done by the commission houses and comparatively small stock is being carried. The very hot weather is the cause of wilted condition of stock and the small amount of business. Out-of-town shipments are the mainstay of most of the houses. Some little stock of cosmos and asters, the first of the season, was received. There was a big demand for white stock last week and it still holds to a great extent. Green stock is plentiful and potted evergreens are selling fairly well. Beauty are lower this week, selling from \$15 to \$25 per 100. Bride and Maid go from \$4 to \$10. Kaiserin Augusta Victoria sells from \$3 to \$10. Cattleyas are few and bring 45 to 50 cents. Carnations plentiful at prices running from \$1 for inferior grades to \$3 for fancy kinds. Peonies are about over, although some can be found at \$4 in one or two of the commission houses. Smilax brings \$15 to \$20. Sweet peas are plentiful and not extra, averaging about 35c. Water lilies are good at \$4 though few are to be had. Harrisii lilies bring \$10 to \$15. The local florists are getting some fair business in design and wedding work and also in potted stock. The growers are making big preparations for the coming season and are busy rebuilding, painting and fixing up. Thos. Mehan Sons are making more office room and enlarging the greenhouses. P. M. R.

BOSTON.—The condition of the wholesale trade for the past week has been much more satisfactory than for several weeks past. Very warm weather has brought on crops of many of the growers and they have decided to throw out and re-plant in many instances. This has helped considerably in shortening up the supply which has been so far ahead of the demand for several weeks past. In roses good American Beauty are not plentiful and Richmond are not so good as they were. Some good Liberty are in.

Freeport, N. Y.

Mr. James Dean has disposed of his property here, and will probably return to his 80th street residence, Brooklyn, in the Fall.

Dr. Julian Dean, son of Mr. Dean, was married, in the second week of June, to Miss Marion Macdonald, of Brooklyn. The young doctor has established an office for some time past at 324 Jay street, Brooklyn, and is having an increasing and successful practice.

This is a better Summer season rose than Richmond. Some good Bruners are seen. Carnations are yet very plentiful, but the quality is still good. Sweet peas are plentiful from out-of-doors. Valley sells well. Lilies are not so plentiful. Asters have made their appearance in small lots. Prices are yet not very satisfactory though there is a tendency to quicker moving all around. J. W. D.

INDIANAPOLIS, IND.—No complaint is heard as to the past week's transactions. The retailers enjoyed a fairly good business in the various branches. Funeral work, as is customary in extremely warm weather, is very plentiful. Counter trade, too, has been enhanced with many orders. More weddings are scheduled for the 24th of this month than at any other date in the year.

All kinds of flowers have diminished in quantity and some of the growers who usually have stock to offer at wholesale are themselves eagerly accepting stock. Good carnations are difficult to obtain at \$1.50 to \$2 per 100. Harrisii, auratum and candidum lilies are nice for design work at general market prices. Out-of-door sweet peas, all colors, are a great factor at 25c. to 30c. per 100. Kaiserin Augusta Victoria roses in full crop are offered at \$3 to \$5 per 100. These, with American Beauty at \$5 to \$35 per 100 are the best for hot weather use. Excellent gladioli are brought from indoors at \$4 per 100. Hydrangea aborescens is certainly good for made-up work and brings fancy prices. Garden flowers, such as coreopsis, Shasta daisies and snapdragons, always find a liberal patronage. Tomlinson Hall Market realized a brisk business last week. Nearly all the fancy goods were accepted by the store men. Little remained after the retail trade was supplied. I. B.

CHICAGO.—The market presents an aspect of Summer dullness. The demand for cut flowers is light, and arrivals are considerably shorter, in the main, than they have been for some time, particularly in the case of indoor grown stock. Roses are plentiful, but very generally poor in quality, due to the extremely hot weather experienced during the past few days. Quite a little stock cut from early henchings is coming in, and sells better than the stock coming from the older plantings. Carnations continue to arrive in large quantities, but after the best are picked out, the balance, always in the majority, can be moved only on a sacrificial basis. Lily of the valley is in better supply and meets a demand which fluctuates from one day to another and lilies are a drug; candidums are coming quite heavily, but returns for them are very light. Asters have made their appearance, but there is too much easily and cheaply grown stock in other commodities to give them much of a showing in the price lists. Spanish iris is plentiful and good and brings from 15c. to 25c. a bunch. Fancy ferns are arriving daily from the East, and are remarkably fine in quality, although the intense heat spoils quantities of them in transit. Prices are unchanged. J. H. P.

ST. LOUIS.—The market is now in a ragged condition. The wholesalers say the demand was good last week, but stock very poor—hardly good enough to fill orders with. The hot weather has caused a good many of their consigners to pull out their old stock to make room for the young plants and from now on we will have to depend greatly upon outdoor stock. Not much will be needed from now on as the season is at an end.

The market today, June 22, surely looks like Summer. Dullness has set in for good. Carnations are of poor grade and decidedly scarce. American Beauty, long, \$3 per dozen, others from \$1.50 down to 50c. per dozen. Other roses very poor with \$5 per 100 top price. Lily of the valley line at \$4; gladioli spikes \$4 per 100; sweet peas, 25c. to 50c. per 100, not of good quality. In greens, the market is well supplied with everything, including extra good long smilax. ST. PATRICK.

Baldwins, N. Y.

David A. Dean, son of Mr. James Dean, is erecting a greenhouse range at this place. The buildings will be erected by the King Construction Company, and to start with will consist of three, each 22x125 feet. The contracts are let, and call for the completion of the houses by July 15. The shed is already erected. Mr. Dean will probably grow carnations this year, and later start plant growing, following somewhat in the lines taken by his father.

BOWLING.

NEW YORK. The subjoined scores were made by the bowlers at Thum's alleys, on Friday evening, June 12, 1908:

R. Berry	102	156
J. S. Fenrich	210	145
P. Traendly	165	150
P. O'Mara	149	134
J. Donaldson	148	108
Jos. A. Manda	130	143
N. Schreiner	162	136
J. A. Shaw	142	114
H. Gessler	137	178
R. Irwin	114	131

The contest for the W. A. Marshall prizes has closed; it consisted of 8 games. The first prize, a box of cigars, was won by Joseph A. Manda, with a total of 1262; Mr. Marshall himself was second, with 1217, and John Donaldson, who was awarded the second prize, a budding knife, scored 1192.

BALTIMORE & WASHINGTON.—About 15 of the Baltimore florists visited Washington on June 20 for a match game at bowling. They were entertained by the Washington bowlers at the Royal Bowling Alleys. The following is the score for three games:

Baltimore.		
Richmond	114	161
Peery	136	133
Moss	145	146
Lehr	144	147
Siebold	147	132
Klutch	211	155
Washington.		
Shaffer	190	166
Simmonds	156	110
McCaughey	138	153
Campbell	114	198
McLennan	179	140
Barry	134	164
C. McC.		

NEW HAVEN, CONN.—George Hunter, florist, has returned after spending a year in Australia and New Zealand.

Newport, R. I.

In the death of A. D. Rose, we have lost another staunch friend. "Doc" was a man who was led and true, and was the opinion which I formed of him way back in 1882, when we were fellow campers on the S. R. Payson estate at Watertown, Mass., and I have never had any occasion to change it. Max L.

NORTHAMPTON, MASS.—The building committee of the Trustees of the Agricultural College met last week and considered estimates for the new plant house and classrooms for the horticultural department.

GARLAND, ME.—F. W. Bond, florist and gardener, of Cornua, will start a route for seeds and plants through this place.

NASHUA, N. H.—Harold Blake, son of Charles H. Blake, florist, is at home from New Hampshire College at Durham for his Summer vacation.

GLEN COVE, N. Y.—The Nassau County Horticultural Society held its annual rose show in Pendroke Hall, on Tuesday, June 23.

EVANSVILLE, IND.—A new store front is being erected by the Blackman Floral Store at 402 Main street.

THE WEEK'S WORK

Timme's Timely Teachings.

Myosotis.

There are seasons when forget-me-not is constantly called for and never to be had in sufficiency at the cut flower distributing centers. The appeal of the little beauty to forget it not has gone unheeded by every grower within a hundred miles. All—beware! their shortsightedness—duly take note, resolving to do better in the future. The following season everybody's shipment contains myosotis, but all efforts of the commission wholesaler to dispose of even a bunch or two occasionally are in vain; nobody wants it. To unerringly foresee the seasons of scarcity or plenty and prepare accordingly is a mental gift possessed only by a select few, whose achievements on this score are duly set forth in the never-varying notes annexed to the weekly trade reports from every city, town and hamlet of our great country. To rightly calculate and plan as to what would meet with a healthy demand the ensuing season is the problem of all others entailing the efforts of present-day growers, a problem as worthy of solution, if not more so than the question of success in production, especially as respects such easily grown by-crops as myosotis and some of still smaller importance in cut flower trading. As a potted plant, offered in connection with the usual run of Spring flowering stock, forget-me-not never yet brought discomfiture to its grower. Eliza Farnholt and Royal Blue are the kinds to grow for this line of trade. For bedding out sempervirens and dissitiflora have proved most satisfactory. Sow the seeds now in the nicely prepared soil of a frame. Keep constantly moist, pot up when large enough and grow on in partially shaded frames, re-potting once or twice as needed and giving them all the light in a cool greenhouse during Winter.

Gypsophila elegans.

Florists depending for a great part of their supply in cut material during the months of Summer on what they grow on their own premises are not likely to underestimate the value of Gypsophila paniculata, the hardy perennial, which, when once established in a garden, is sure to furnish its crop of daintily silvered sprays at the proper time every year. Equally fine for all purposes minutely flowered sprays are made to serve in floral art and to be had at almost any time while Summer lasts is Gypsophila elegans. This is an annual and one of remarkably rapid growth, flowering in about seven weeks from the time the seeds are sown. The sprays, when cut while at their finest, last in good condition for a comparatively long time, but if allowed to remain on the plants soon become seedy and are then of little value to the maker-up of floral work. A sowing of Gypsophila elegans had therefore better be made at intervals of a fortnight from early Spring until the close of August, a few rows at a time where it is to remain and flower, a transplanting not being necessary, though a thinning out, if sown too thickly, probably called for. The plant is not at all squeamish as to kind of soil and seemingly thrives and flourishes as well in the poorest sand spot as in the richest of nicely prepared field rows, grateful, however, in spells of drought for attention to watering on the part of the grower.

Adiantum pedatum.

Few suburban florists possess so limited a space for outdoor display but what a nook somewhere about the grounds could be found for a bed of hardy ferns—wild ferns, if the term suits you better, as it does your patrons. The nearer to the great city's solidly built-up squares of stone and iron the more welcome a sight is the bed of woodland green. If it is to be edged in or fringed by some strongly contrasting or, as taste may dictate, by a ribbon line, harmonizingly appropriate rather, many are the kinds of flowering or foliage plants that one might choose from. None of all these more fittingly answers the purpose, or is least likely to turn charming effect into frisky detail, than Adiantum pedatum, the only species of maiden-hair fern to be found in our woods. In looking for it there direct your steps

toward moist, gravelly places, not always the most densely shaded, never very close to the taller trees, but search beneath the undergrowth among the most coyly hidden of forest plants, and there you may find Adiantum pedatum, sometimes in groupings of a dozen or more, oftener an isolated bunch or two. Plants gathered some ten years ago and transferred to my garden when in full growth, never seemed to mind the change in soil or situation nor any shifting about from one place to another since, as occasion demanded. Although any great increase in size or spread of plants during all those years is not noticeable, none of them was lost or failed to show up every Spring. Should roving through the lonely woods possess no fascination for you, then I advise sending for the plants to where they may be listed in catalogues as belonging to hardy ferns there offered. Select and prepare a place in your grounds for their reception, taking care to have it somewhat shaded and not too freely exposed to hot and drying winds. Do not plant too close to hardy ferns of any of the other species; those of a tall growth and spreading habit would soon crowd out our rarest of wild ferns or screen from view its exquisite beauty.

Decorative Specimen Plants.

Plants too frail or of too valuable or sensitive a character to risk their being injured by temporary outdoor exposure, should nevertheless share to the fullest extent in the benefits that Summer holds forth to all vegetation. In the three or four months of warmest weather, now before us, they will do their best growing, if but afforded an opportunity. Conditions under glass during this comparatively brief period, as easily brought about and maintained by simply attending in a proper way to ventilation, shading, sprinkling and cleanliness, will do more toward advancement in perfect, clean-cut growth and actual value of greenhouse and hothouse specimens than what may be accomplished under the highest of skillful treatment during all the rest of the year. Plants of this class yet on parade in overcrowded show house or narrow quarters should be spread apart, while room in other houses is unoccupied. Replanting, if actually of need, is in order; a sponging off, even if not just needed, is of benefit and should not be considered a waste of time. It is possible that insects, nesting, crawling or hopping, so far undetected, may thus be discovered, dispelling all doubts as to the cause of puzzling behavior and appearance of plants. The extermination of plant-infesting insects is a sacred duty that no true gardener dare shirk, and the destruction of insect harboring, unsightly, hopelessly good-for-nothing plants is a proof of wisdom, the furnishing of which compels respect. But this reminds me of plant destruction of quite a different sort—the sort that is a crime, a few words will explain:

FRED. W. TIMME.

ROSES

Grafted: Belle, Bridesmaid and Killarney, 4 inch, \$26.00 per 100.
Own Root Bride, Bridesmaid and Richmond, 4 inch, \$7.00 per 100.

The preliminary list of premiums offered by the Lake Forest Horticultural Society at its second annual exhibition to be held at Lake Forest, in July, is out, and copies may be had by addressing J. W. Sharfenberg, the secretary. Under the rules of the society, commercial florists and nurserymen are not eligible competitors for prizes. William C. Egan of Highland Park, E. A. Kaust and W. N. Rudd of Chicago, are to be the judges in the floral sections.

Edward Eisner, for many years with C. A. Samuelson, has opened a retail store on his own account at 5523 Halstead street.

Louis Turner of Winnetka, Wis., was a visitor last week. He reports business in his section as having been good throughout the season.

F. R. Hills, the Maywood florist, has gone with Mrs. Hills to California, for an indefinite visit. Mrs. Hill has not been in good health for some time, and the change is for her benefit. In their absence the store and greenhouses will be operated under the management of their two daughters.

C. W. Eichling of the Avenue Floral Company, New Orleans, is in town this week, enjoying the prevailing tropical weather.

The committee having in charge the picnic of the Chicago Florists' Club held a meeting last Thursday, when its number was added to, and the detail work apportioned. The following sub-committees were appointed: Music, J. C. Vaughan; transportation, F. F. Bentley and Aug. Poehlmann; program and printing, J. H. Pepper; catering, T. E. Waters and Ed. Enders; concessions, Fred. Lautenschlager; games, John Zech; prizes, H. N. Bruns; treasury, J. E. Jensen. A general meeting of the committee was held on Monday at the store of the Poehlmann Bros. Company, and plans formulated which promise to make July 19 a red-letter day in the history of the club. There is an open invitation to florists in all sections to join with the club in making the day one of great enjoyment.

The E. F. Winterson Company is receiving daily shipments of early white asters.

A few blooms of the new red seedling rose which Weiland & Risch are bringing out at their Evanston establishment are to be seen daily at their Wabash avenue store. It is a beautiful crimson, quite double, and very fragrant. As a Summer rose it is full of promise and bids fair to outrival Richmond. It has not yet been named, but will be in the near future. In the meantime a stock is being collected.

Some excellent blooms of the Cardinal rose are to be seen on the counters in Poehlmann Bros. Company's store. They arrive in grand commercial shape, nice tight buds, good in substance, and fine in color. The company thinks so highly of this rose that twice as many plants are being benched this year as were benched last year.

Wieter Brothers are cutting from a new planting of American Beauty roses, and some fine flowers reach their Wabash avenue store every day.

F. F. Bentley, chairman of the Chicago Florists' Club's Transportation Committee, says that the matter of transportation to the S. A. F. convention at Niagara Falls is receiving every attention, and that arrangements will be ready for announcement next week. The indications are that an unusually large number of visitors will go from Chicago this year. J. H. P.

Chicago.

The Week's News.

Business in retail circles is keeping up pretty well and the volume for June, so far, has proved to be highly satisfactory. There has been an unusually large number of weddings, a condition always helpful to the retailer; and funeral work has been quite heavy for the time of year. As was expected, the Republican convention held last week was productive of very little business for florists in general. Retailers within the loop district downtown did a more than ordinarily good transient trade, but this was all.

Tuesday evening of this week is to see the start of a series of bowling games to determine the make-up of the team to represent Chicago at the S. A. F. convention. Mussey's alleys have been chosen for the purpose.

Quite a lot of candidum lilies arrived in the market last week, in a state which made them unfit for sale. Growers should cut them before they are fully matured if they want to get them to market in good condition.

Victor Bergman of the Ernest Wienhoeber Floral Company leaves this week for Pittsburg, where on June 26 he is to wed Miss Lena Ludwig, daughter of Gustave Ludwig, the well-known florist of that city. After the ceremony the couple will proceed East for their honeymoon. J. H. P.

New York. News Notes. The season of commencements and weddings is drawing to a close, and vacations are now in order. Particularly so are the latter to those who are so situated that they can take a vacation during the warm weather. The season just closing will, we think, be one that will be long remembered, and, if we compare the business of this with that of last year, either wholesale or retail, the present one will make a very poor showing; but we must bear in mind that the business season of last year was one of the very best on record, and, strictly speaking, the comparison would not be a fair one. We should perhaps rather compare this year's trade with that of an average year. Without a doubt, the total volume of business—that is, in quantities of flowers and plants disposed of—has exceeded that of any previous year, but the money value, chiefly on account of supplies of all kinds being maintained in such excess of the daily demand, has been much less, and profits along all lines have, necessarily, been smaller. Compared with other lines of trade the florist has held his own remarkably well. There have been no failures of any importance, and every one in the trade is working and providing for next year's supply, just as though nothing had happened; and, as there is always a healthy reaction from any stringencies that occur in trade, we may confidently expect to see the flower and plant trade opening up in a good, healthy condition with the commencement of the social season next fall. Robert F. Tilney, referee in the bankruptcy proceedings of Hicks & Crawbuck, Inc., Brooklyn, N. Y., has issued notice that Eugene F. O'Connor, Jr., trustee,

Daniel B. Long and W. F. Kasting, Buffalo, N. Y. James I. Donlan sailed for Europe on the S. S. Mauretania, Wednesday, June 24, and will spend two months in England and Ireland. St. Louis. News Notes. The sad news of the death of our friend, Alexander Wallace, in the last issue of The Florists' Exchange, was a great shock to the many friends of Mr. Wallace in the trade here, who extend their sympathy. Frank Weber and J. W. Schuette, who were delegates to the nurserymen's convention recently held at Milwaukee, have returned home much pleased with their trip and report a great time. William Osseck of W. C. Smith & Company, and Miss Matilda Windt, daughter of the well-known florist, J. P. Windt, 501 Bayard avenue, were married last week, at the residence of the bride's parents. The happy couple left the same evening for a trip to New York and other points. They will return July 15. We extend our congratulations. The St. Louis Horticultural Society's executive committee held a meeting Tuesday of last week, Chairman Sanders presiding. Arrangements were perfected for the annual flower show to be held this fall. A committee was appointed to look up a suitable hall in which to hold the exhibition. Mr. Sanders is of the opinion that this year's show will be a success. The Engleman Botanical Club held a meeting last week in the Central High School Building and decided to conduct no more meetings during the next three months; the meeting was well attended. The following list of players who will comprise the wholesalers' baseball team was given out: George Schriever, pitcher; Fred. Alves, catcher; Ed. Gerlach, 1st base; J. O'Rourke, 2d base; L. Shippers, 3d base; Al. Gunis, ss.; C. Sanner, Otto Bruning and W. C. Smith, in the field. The subs. are C. H. Kuehn, H. Berning and Geo. Augermuller. The W. C. Smith Wholesale Floral Company was incorporated the past week with a capital of \$5,000, all paid up. They do a general wholesale business at 1316 Pine street. The incorporators are W. C. Smith, Will H. Osseck and Christian Smith. Miss Theresa Badaracco, the well-known Olive street retail florist, will again take up her vocal studies. Miss Theresa is noted for her fine voice, having sung at different large concerts the past year. The trustees of the Florists' Club held a special meeting at the store of W. C. Smith & Company, and completed all arrangements for the florists' picnic, to be held at Normandy Grove, July 15. They will also make a great effort to have all the retailers close half a day; the wholesalers always do; there will be a large list of special prizes donated by the different florists. The main event will be the much talked of baseball game between the retailers and wholesalers. Both teams are at practice and great rivalry exists between them. The bowlers, too, will have a chance to win some prizes this year and the alleys are in splendid condition for big scores. ST. PATRICK.

New Orleans. Jottings. W. Eichling is in attendance at the national saengerfest at Indianapolis and will later visit Chicago and other large centers. A fire which destroyed some cottages belonging to J. St. Mard did considerable damage to his greenhouses and plants. His planting of chrysanthemums was badly scorched and a quantity of new pots were totally destroyed. At their June meeting the Horticultural Society decided to have their annual outing this season at Mandeville, which is beautifully situated on the shores of Lake Pontchartrain. James A. Newsham, who has just returned from a two-months' trip to Central America, gave a very interesting talk upon his journey in search of orchids and told of the many hardships and difficulties that the collector has to contend with. Mr. Newsham was tendered a hearty vote of thanks. The Abele Bros. exhibited well-grown plants of the double lobelia and some fine aster blooms, the first of the season. CRESCENT CITY.

Ideal Plant Food

Put up in lots of 50 boxes for the trade with your name and address on labels. Price \$7.00.

EDWARD MacMULKIN,
194 BOYLSTON ST., BOSTON, MASS.

Cincinnati.

Trade and Other News.
Miss Charlotte Weber, daughter of N. Weber, florist, Mohawk place, Cincinnati, was married June 18, at Milwaukee, Wis., at the Orphan Asylum, to E. Clark, also of Cincinnati.

J. A. Peterson, the plantsman, tells me his business all season has been fine. This comes from being a hustler, a good plantsman and growing what will sell and what the people want.

Please take notice that all eyes will be centered on Cincinnati for the next five months and mark it down on your slate that Cincinnati will furnish the next President of these United States. William H. Taft and James S. Sherman were in Cincinnati June 20, and Republican headquarters will be established here. So the outlook for the florist's business looks good to me, especially in September, October and November.

In October the Grand State Conclave of Knights Templar of Ohio convenes in Cincinnati. This always means a lively week for the florists, as the headquarters of all the Commanderies are nearly always decorated when they keep open house.

Business during the past week has shown considerable improvement. The writer had the first asters June 24. They were grown outside, were very good and sold at \$1.50 per 100.

H. Schmidt, of Oxford, O., was a caller June 20. He is the grower of the asters and will be ready with chrysanthemums when needed in September; starting the ball rolling with Monrovia and Polly Rose. E. G. Gillett will handle his cut.

L. F. Benson, the Newport (Ky.) florist, has sold out his business to J. Mounders. Mr. Benson contemplates an extensive trip West, possibly reaching the Pacific coast, looking for a location and a more congenial climate.

George Walker, superintendent of the Jabez Elliott Flower Market, has been on the sick list for the past four weeks; he has now gone to the country to recuperate. George and "Bill" Taft are about the same size. We are thinking of getting up a goat race between them for our annual outing.

There will be a meeting of the board of directors of the Cincinnati Florists' Society, Monday, June 22, at the office of E. G. Gillett at 2:30 p. m. to talk on some special business. E. G. G.

Washington, D. C.

News Items.
Washington is firmly in the grasp of a torrid wave, which has sent people scurrying out of town by the hundred each day and made the city, comparatively speaking, a deserted village. With the people go the chief support of the retail florist stores and their absence is felt accordingly.

The usual business inactivity which goes hand and hand with election year seems to have magnified its various forms this season in all the commercial branches.

Many of the local florists attended the outing given by Florists' Club bowling team at Chesapeake Beach on June 18, where they enjoyed the various amusements, including the bowling alleys. Prof. Charlemagne Koehler, honorary member of the club, was among the number who took the outing.

Z. D. Blackstone has had a very unique and exquisitely made window decoration, consisting of an artist's palette with brushes, paints, etc., worked in splendid color value and effect by the use of immortelles and other material. JAS. L. CARBERY.

Here Is What The Man From Pennsylvania Thinks

Conshohocken, Pa., March 26, 1908

Lord & Burnham Co.

Dear Sirs:

The "Burnham" boiler I purchased from your Agent, D. T. Connor, is here to stay.

No more getting up at night; no watchman required - it takes care of itself.

I have with one coaling, kept steam for 24 hours. I heat with this boiler a greenhouse 240 x 20 feet, and my nine-room house, with the greatest satisfaction.

I have used six boilers in my experience, but none can touch the "Burnham."

Yours truly,

WINFIELD S. HARRY

We Invite Investigation

because the more you investigate the more you will be convinced that

In Your Greenhouse the boiler that will give you the best heating results, with the least fuel expense, is the

NEW DUNNING BOILER

The ample fire box with high crown sheet provides complete intermingling of air with gas, and combustion of the mixture at high temperature, while three long, vertical fire-travels (twice length of boiler) compels absorption of every heat unit by water before it passes up flue. The smoke-pipe of a **New Dunning** is never hot.

No shoulders or offsets to collect sediment. No tubes to gather soot. Free circulation in every part. Portable or made to set in brick. Made of Siemens-Martin wrought-steel, hot-ripped plates. Tested by severest known tests and guaranteed in every particular. Easy to clean, simple to operate, nothing to get out of order, inexpensive to keep up.

The United States Government Has Used **DUNNING BOILERS** for Thirty Years

W. M. RHOAS, Director.

Dear Mr. Pearce: May 29, 1907.
We have just received the larger Tobey heater and within a few days we will install this and return the smaller one to the J. L. Mott Iron Works. We are turning over to our treasurer for payment the balance due you, which amounts to \$200.00. In concluding this transaction I desire to express to you my hearty appreciation of the excellence of your work and the honesty and courtesy of your methods. We believe that we have one of the best greenhouses in the South, and any time that you need a good word, I hope you will not fail to call on us. Yours truly, W. M. RHOAS, Director.

NEW YORK

Mastica is elastic and tenacious, admits of expansion and contraction. Putty becomes hard and brittle. Broken glass more easily removed without breaking of other glass as occurs with hard putty. Lasts longer than putty. Easy to apply.

TALKS ON GREENHOUSE MATERIAL

No. 11

It is a well known fact that the cost of building a greenhouse is a large item in the budget of the grower. It is also a fact that the cost of maintaining a greenhouse is a large item in the budget of the grower. It is therefore, of great importance to the grower to know the best material to use in building a greenhouse. This is the purpose of the talks on greenhouse material. The talks will be given by Mr. J. C. Stearns, of the A. T. Stearns Lumber Co., of Neponset, Mass. The talks will be given on the following subjects: 1. The selection of material. 2. The construction of the greenhouse. 3. The cost of the material. 4. The cost of the construction. 5. The cost of the maintenance. 6. The cost of the operation. 7. The cost of the profit. 8. The cost of the loss. 9. The cost of the repair. 10. The cost of the replacement. 11. The cost of the depreciation. 12. The cost of the interest. 13. The cost of the taxes. 14. The cost of the insurance. 15. The cost of the freight. 16. The cost of the labor. 17. The cost of the fuel. 18. The cost of the water. 19. The cost of the electricity. 20. The cost of the gas. 21. The cost of the oil. 22. The cost of the kerosene. 23. The cost of the coal. 24. The cost of the wood. 25. The cost of the brick. 26. The cost of the stone. 27. The cost of the concrete. 28. The cost of the plaster. 29. The cost of the paint. 30. The cost of the paper. 31. The cost of the glass. 32. The cost of the sash. 33. The cost of the hinges. 34. The cost of the bolts. 35. The cost of the nuts. 36. The cost of the washers. 37. The cost of the rivets. 38. The cost of the nails. 39. The cost of the screws. 40. The cost of the staples. 41. The cost of the wire. 42. The cost of the rope. 43. The cost of the twine. 44. The cost of the twine. 45. The cost of the twine. 46. The cost of the twine. 47. The cost of the twine. 48. The cost of the twine. 49. The cost of the twine. 50. The cost of the twine.

Patent Applied For

Why My New Curved Eave is Far Superior to Anything on the Market Today

- 1st. No sash bars encased in iron, thereby eliminating all danger of bars decaying.
- 2nd. Can be used in conjunction with iron frame construction, thereby doing away with that very objectionable feature, "columns."
- 3rd. Roof bars with drip grooves, which act as conductors to carry away the condensation: **Result**, the driest roof ever used for greenhouse purposes.
- 4th. **THE MOST IMPORTANT OF THEM ALL.** The very small increase in cost over the ordinary style of construction which makes it possible to be used for commercial as well as private purposes.

Say, That's So,

this is the firecracker, sky rocket month! Independence Day, put-out eyes, blown-off fingers and other little matters. Now while the other fellow is making so much noise, we want to explode under you one of our own make of giant crackers, something that will move you in the right direction. We are going to touch the fuse on this greenhouse question. You know how a good wood post rots out? Well, a guaranteed wrought iron post doesn't, so don't you ever use another wood post (that is if you are on the lookout for something better and cheaper). Our Clamp Column Fittings are another thing to get burned into your mind; they are interchangeable and by using them you can have the Giant Arch in your cypress house. These clamp fittings used with pipe columns hold your house up, down, and clamp the whole proposition together. Gee, that was a big noise! Well, then get in line.

Did you, or didn't you get that 1908 calendar of ours? If you did, you recognize that this "say-so" is taken from the pad. If you didn't, now you wish you had. Send.

LORD & BURNHAM CO.
